PSAS'2018 - International Conference on Precision Physics of Simple Atomic Systems

Contribution ID: 101

Type: poster contribution

Status Update of NoMoS

Monday 14 May 2018 19:00 (5 minutes)

We present a new method of spectroscopy, utilizing a drift effect to disperse charged particles in a uniformly curved magnetic field. The curved field results in a drift of the charged particles perpendicular to the radius of the curvature and to the magnetic field, which is proportional to the particle's momentum. A spatial-resolving detector will determine the momentum spectra. The first realization, called NoMoS (Neutron decay prOducts MOmentum Spectrometer), will measure correlation coefficients in free neutron beta decay to test the Standard Model of particle physics and to search for physics beyond. Currently, the focus is on the design and the construction of the magnet system.

print service

no, I'll bring my poster to the conference

Authors: MOSER, Daniel (Technische Universität Wien); BROUSSE, Clement; Dr KONRAD, Gertrud (SMI & TU Wien); FILLUNGER, Harald; ABELE, Hartmut (TU Wien); BOSINA, Joachim; ZMESKAL, Johann (Austrian Academy of Sciences (AT)); PITSCHMANN, Mario (Vienna University of Technology); KLOPF, Michael (TU-Wien); SOLDNER, Torsten; WANG, Xiangzun

Presenter: MOSER, Daniel (Technische Universität Wien)

Session Classification: Poster Session, Monday
