## CP Phases and Symmetries

*Thursday 29 November 2018 14:25 (25 minutes)*

In scenarios with flavour and CP symmetries CP phases can be predicted. I present possibilities to link the amount of CP violation in the lepton sector to the one in the quark sector. I also discuss examples of correlations of leptonic CP phases at low and high energies, measurable in neutrino oscillations, neutrinoless double beta decay and relevant for leptogenesis, respectively.
