Neutrinos in matter

Thursday 29 November 2018 18:10 (25 minutes)

The Schrodinger equation for three neutrino propagation in matter of constant density is solved analytically. The final result for the oscillation probabilities is obtained directly in the conventional parametric form as in the vacuum but with explicit simple modification of two mixing angles, θ_{12} and θ_{13} , and mass eigenvalues.

Content of the contribution

Theory

Author: Dr IOANNISYAN, Ara (A.Alikhanyan National Science Laboratory (AM))

Co-author: POKORSKI, Stefan (University of Warsaw (PL))

Presenter: Dr IOANNISYAN, Ara (A.Alikhanyan National Science Laboratory (AM))

Session Classification: Neutrino masses, mixing and discrete symmetries

Track Classification: [4] Neutrino masses, mixing and discrete symmetries
