Global overview on neutrino masses, mixings and CP violation

Thursday 29 November 2018 09:00 (35 minutes)

In this talk, I will describe the current status of global analyses of neutrino oscillation data in the three-flavour framework, focusing on the current knowledge of the oscillation parameters as well as on the improvements that can be expected in the near future. The recent hints pointing towards a preferred value for the leptonic CP phase and a preferred ordering for the neutrino spectrum will also be discussed.
