The European Strategy Update 2019/2020: Discussion on Priorities for Future Facilities

Monday 26 November 2018 14:00 (35 minutes)

October 2018 the European Strategy Update study for the particle physics program has been launched. This study will evaluate the options and priorities of proposed particle physics facilities for the next five years and beyond.

This presentation will report on the planned steps and milestones of the European Strategy Update study, and describe some of the proposed key projects that are being discussed, both at the intensity and high energy frontier. These include LHC updates, new linear and large circular colliders, in particular Higgs factories, proposals for physics beyond colliders facilities and a new generation of neutrino experiments.

Content of the contribution

Experiment

Author: DE ROECK, Albert (CERN)

Presenter: DE ROECK, Albert (CERN)

Session Classification: Plenary

Track Classification: [8] New results from LHC, new facilities
