Lepton flavour universality at Belle and Belle II

Monday 29 August 2022 10:00 (30 minutes)

The rate of semitauonic and electroweak penguin decays in the B sector show hints of lepton-flavour universality violation. Belle and Belle II data is well suited to probe such anomalies. The low-background collision environment along with the possibility of partially or fully reconstructing one of the two B mesons in the event offer high precision measurements of semileptonic and electroweak B decays. This talk presents recent Belle and Belle II results on lepton flavor universality tests.

Scientific topic

Symmetries

Author: Dr CHOUDHURY, Seema

Presenter: Dr CHOUDHURY, Seema
