

# Machine learning in lattice QCD and beyond

*Tuesday 11 February 2025 11:55 (20 minutes)*

I will give an overview of our group's progress in applying machine learning to lattice QCD, including the design of gauge-equivariant neural network layers that can learn a fixed-point action. I will also share our ongoing work on diffusion models and ideas for collaborative efforts towards large physics models.

I would like to take this chance to promote the European Coalition for AI in Fundamental Physics (EuCAIF) and its role in the upcoming JENA white paper on European Federated Computing.
