

B_c-nucleus system bound states with/without the Coulomb force

Tuesday, September 24, 2024 12:10 PM (40 minutes)

We estimate for the first time the bound-state energies and the corresponding coordinate space radial wave functions of B_c -nucleus systems using a momentum space calculation. We compare the bound-state energies obtained with and without the Coulomb potential, and discuss the interference effect of the strong (nuclear) potential in the Coulomb interaction.
