

# **Student Workshop on Integrability**

Monday 16 June 2025 - Friday 20 June 2025

## **Book of Abstracts**

# Contents

- Exact quantum state preparation . . . . . 1
- Quantum non-equilibrium dynamics with classical determinist circuits . . . . . 1
- Exact out-of-equilibrium dynamics with random unitary circuits . . . . . 1

3

## Exact quantum state preparation

**Author:** Rafael Nepomechie<sup>1</sup>

<sup>1</sup> *University of Miami*

This course is an introduction to some approaches for exactly preparing multi-qubit states on a quantum computer. In Lecture 1, we begin with a brief review of quantum circuits; we then consider the GHZ state, and its preparation in constant depth. In Lecture 2, we introduce matrix product states and sequential state preparation; we consider the example of AKLT states, and their preparation in constant depth. In Lecture 3, we consider the preparation of Dicke states and Bethe states.
