# Neutrino Research in the Czech Republic

*Monday 21 October 2019 16:15 (25 minutes)*

The talk will provide overall insight to the research in the neutrino physics field carried on by the institutions in the Czech republic. It will cover various experiments starting with the neutrino oscillation on accelerators and nuclear reactors, respectively. The NOvA, DUNE, Daya Bay and JUNE experiments will be described. Furthermore it will be discussed the Katrin experiment for the direct neutrino mass measurement, and finally neutrino-less double decay experiments.
