The Geminga Pulsar

- Radio quiet pulsar:
strong gamma-ray and weak radio pulsed emission
- One of the first gamma-ray pulsars detected (EGRET)
- One of four pulsars with VHE pulsed emission detected by IACTs (Crab, Vela, PSR B1706-44)

- Nearby $d \sim 250$ pc
- Older and lower luminosity:
age = 342 kyr,
 $\dot{E} = 3.26 \times 10^{34}$ erg /s

- Pulsars are copious lepton producers – nearby pulsars could help explain positron excess

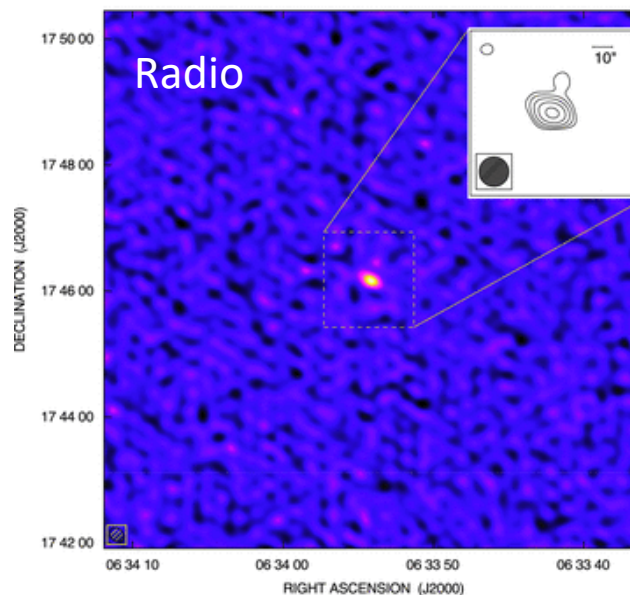

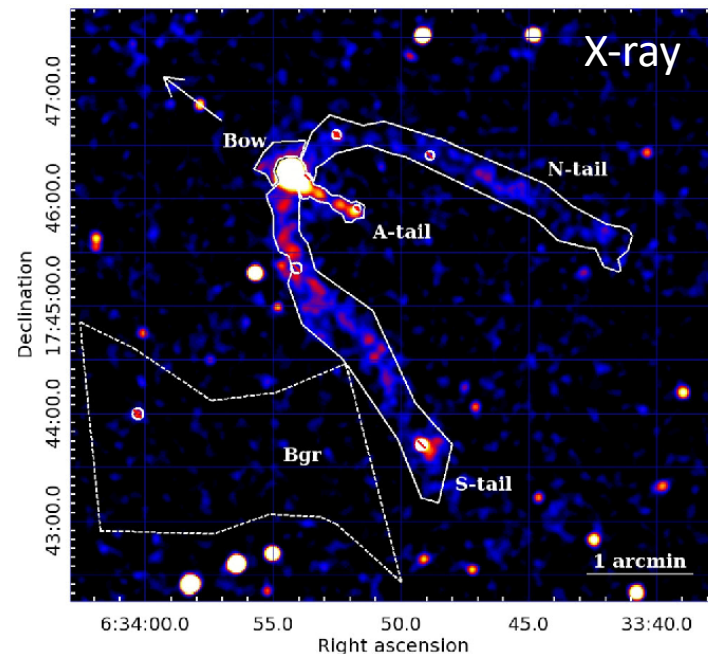

Lopez, MAGIC collaboration, ICRC 2019, PoS 728

Searches for extended emission

- Previous searches for extended emission in gamma-ray and radio
- X-ray and Radio PWN confirmed (on arcsecond – arcminute scales)
- Detection of extended gamma-ray emission around Geminga found by Milagro & HAWC
- Challenging for IACTs due to large scale emission

Posselt et al, ApJ 835, 66 (2017)
Pellizzoni et al, MNRAS Lett. 416, L45 (2011)

HAWC detection of extended TeV emission

- HAWC confirms Milagro excess
- Extended emission on $\sim 2^\circ$ scale
- Low diffusion coefficient inferred by HAWC from radial profile of emission
- Would imply Geminga is not local positron source if representative of intervening ISM
- Cool too quickly to reach Earth

RA-Dec, HAWC collaboration 2017

H.E.S.S.

- Array of five IACTs in Kohmas Highlands, Namibia
- CT1-4 108m² mirror area operational since 2004
- CT5 614m² mirror area, constructed in 2012
- Field-of-view: 5° (CT1-4)
- 50 GeV – 50 TeV range
(c.f. HAWC ~ 1 – 100 TeV)
- ~0.1° angular resolution
(c.f. HAWC ~0.2° - 1°)

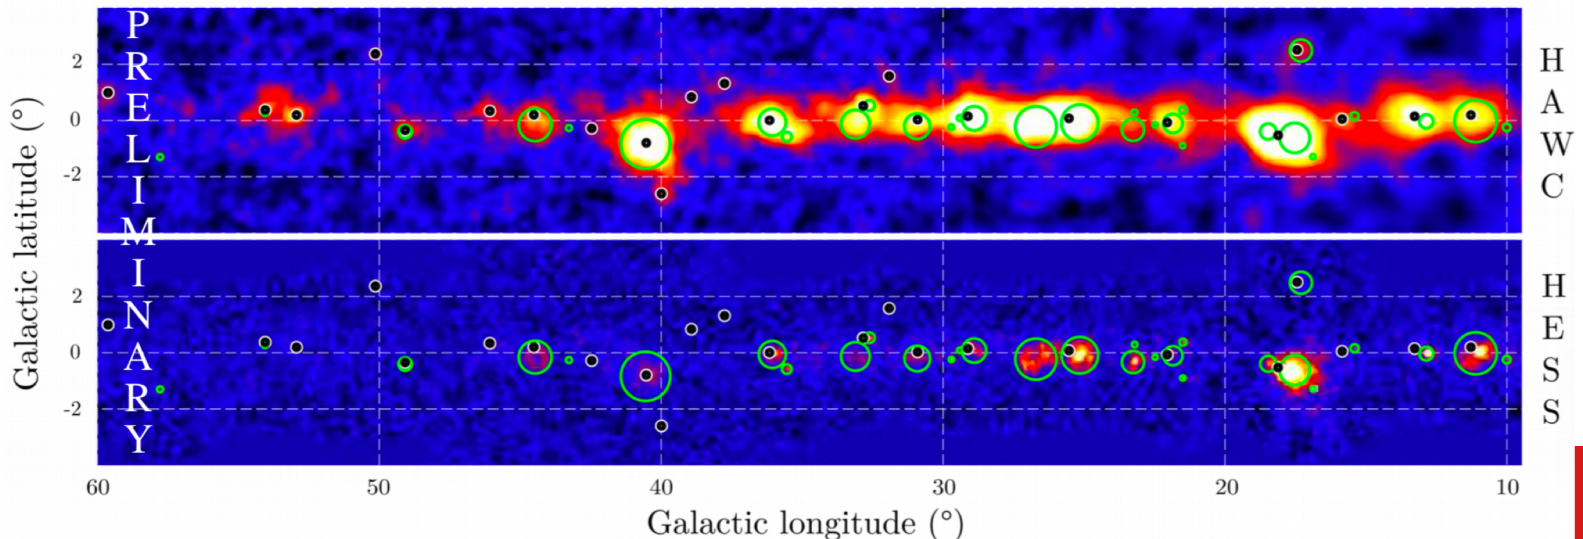

HAWC - H.E.S.S. analysis comparison study

- Recent dedicated effort in understanding analysis differences
- Tested in Galactic plane
- Ring Background: fixed offset from test position, estimate from data outside exclusion regions
- Field-of-View Background: use acceptance map for background estimation, assuming radial symmetry

H.E.S.S. Collaboration, A&A 612, (2018) A1

H.E.S.S. Observations 2006-2008

Time Period	Exposure	Zenith angle
Nov 2006	7.7 hours	42.2°
Jan-Feb 2008	6.5 hours	42.0°

- Data taken in 2006 and 2008
- Observations with H.E.S.S. I telescopes
- 0.5° and 0.7° wobble offset
- 14.2 hours total livetime

- No significant excess seen at the time

- From HAWC spectra, detection should be possible in ~10 hours

- Revisit data applying lessons learnt from HAWC-H.E.S.S. analysis comparison study

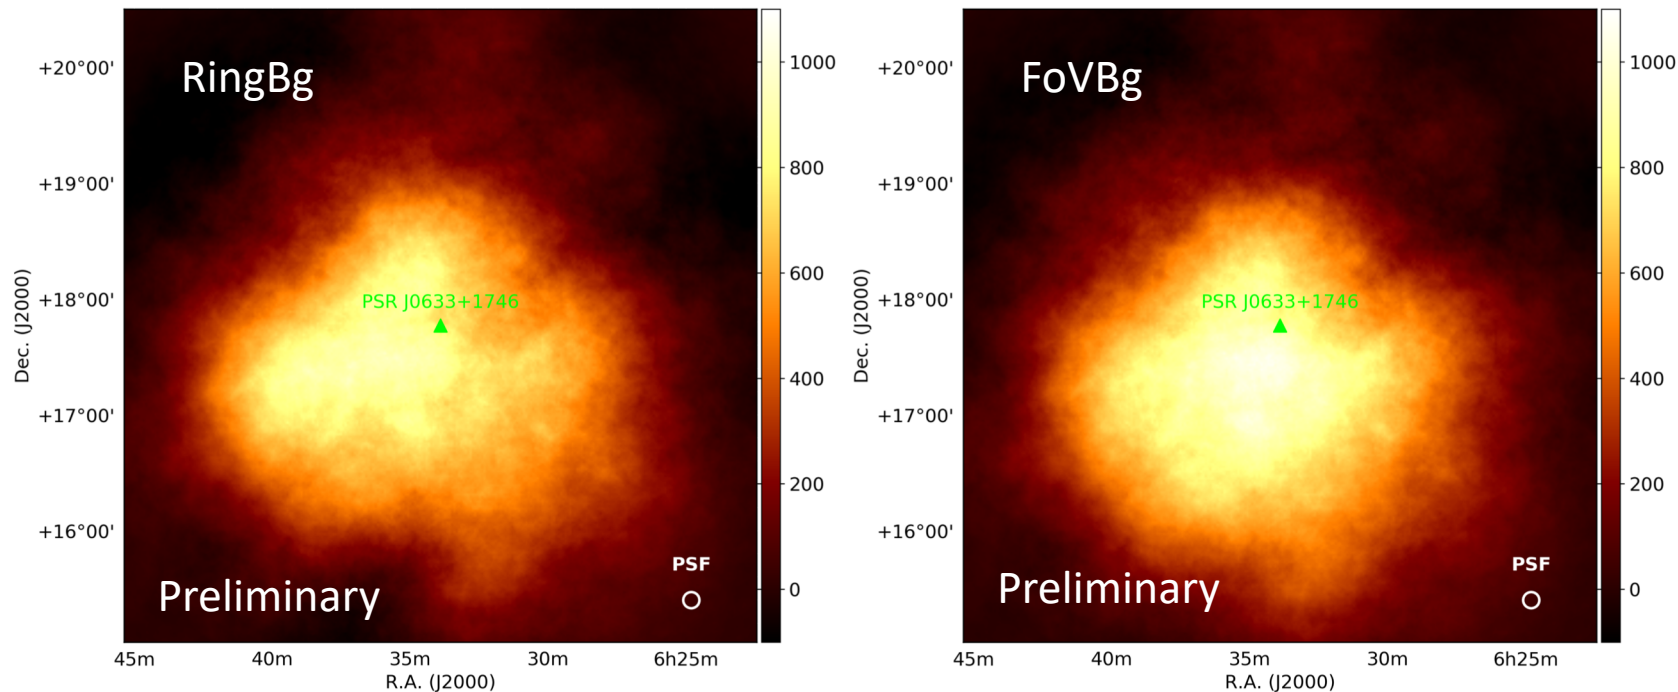

H.E.S.S. detection of extended TeV emission

- Ring background method
- Centred on pulsar:
 - 2° radius exclusion region
 - 1° radius integration region
- 0.5° width ring used for background estimation
(N.B. background contains events from the source)
- 10.9 sigma detection

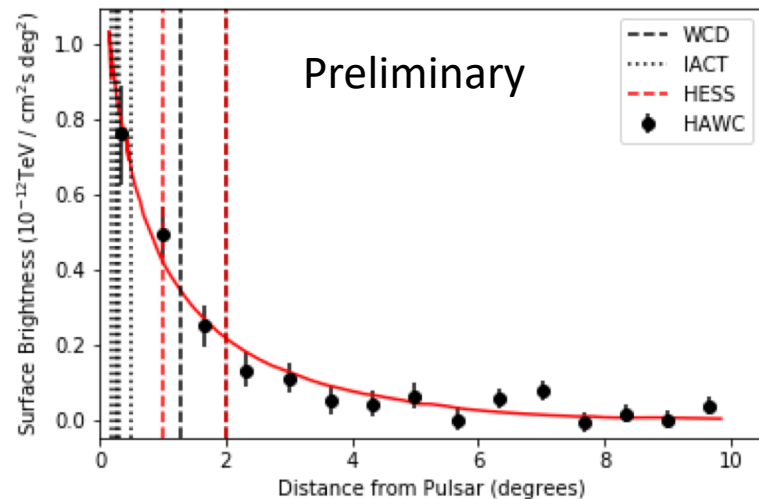

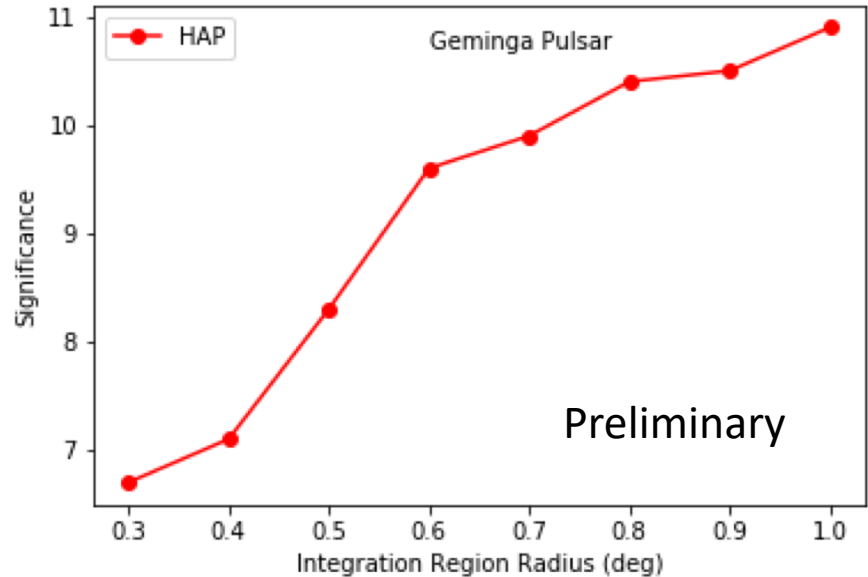

Background Methods

- Ring Background and Field of View Background
- Consistent morphology, different normalisation between background methods
- However, background estimation methods may bias apparent morphology

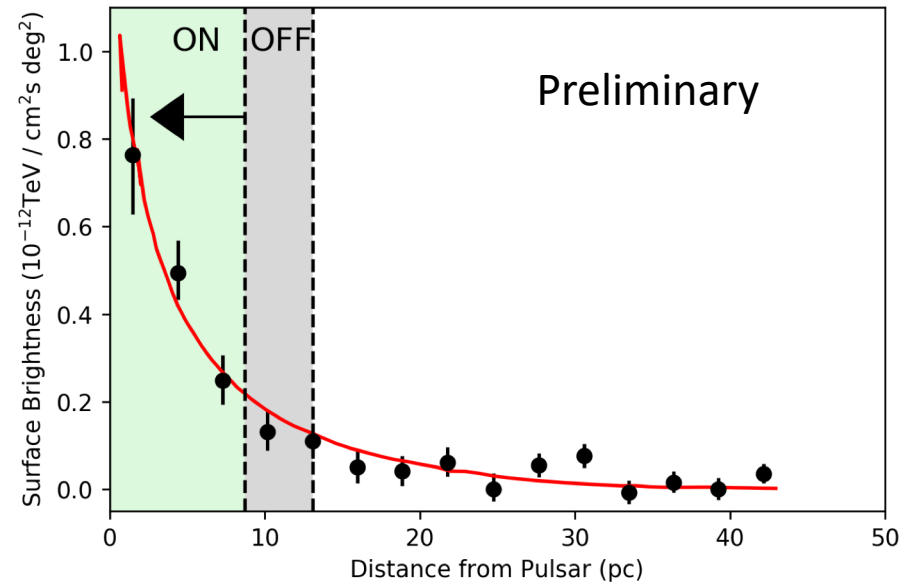

Integration region radius

- Significance increases with increasing radius
- Curve does not flatten
- True extent $> 1^\circ$ radius
- Compared to previous searches with IACTs, H.E.S.S. now probes much larger angular scale

Angular Scale

- PSF 0.08°
- Differential measurement with ring background
- Part of significant emission used to estimate background
- From HAWC profile; should see $\sim 35\%$ of the flux with this approach

See also HAWC collaboration, Science 358, 911-914 (2017)

Observations in 2019

- Another 30 hours of observations taken at large offset
- Intend to use OnOff background method
- Extragalactic runs as OFF data
- More suitable than Ring Background for large extended sources – reduce potential bias in morphology
- Challenges – good run matching selection, background normalisation

Black circles – 2006-2008 observation positions
Cyan squares – 2019 observation positions

Outlook

- Detecting large, extended sources with IACTs is challenging, but possible
- Good IACT angular resolution – investigate sub-structure and morphology
- Verify centroid location of gamma-ray emission
- Spectral analysis and search for energy dependent morphology pending
- Good IACT energy resolution – spectral analysis also from sub-regions
- Analysis results with the 2019 dataset will be presented in a forthcoming publication
