

Hidden Sectors for Heterotic Theories and Gaugino Condensation

Tuesday 13 July 2021 12:00 (30 minutes)

Detailed hidden sectors for a class of phenomenologically realistic B-L MSSM heterotic models will be presented and gaugino condensation - focusing on a wide range of condensation scales, the associated soft supersymmetry breaking terms and their low energy predictions - will be discussed.

Presenter: Prof. OVRUT, Burt (University of Pennsylvania)
