

Quarkophobic W' for LHC searches

Thursday 17 November 2022 16:30 (15 minutes)

We consider a simplified model where a W' boson is added to the standard model with negligible couplings to quarks, but generic couplings to leptons and electroweak bosons. We study the implications of such a model for LHC searches. Consequently, we propose an LHC search through the vector boson fusion topology which would have sensitivity for such a new particle with the current proton-proton collisions's energy and available luminosity.

Poster fallback option for rejected abstracts for parallel oral presentations

No
