# The EPICS Training-VM - a scripted, reproducible, modular approach

*Saturday 20 September 2025 16:00 (5 minutes)*

Since 2023, the new Virtual Machine for EPICS Training (Training-VM) uses a collaborative approach based on Git branches/submodules, Vagrant building and Ansible-scripted installation.
The VM is available in different Linux flavors, with a scripted and reproducible build. Instances can be easily updated from GitHub, allowing per-event configuration and interesting off-label applications.
