Collaboration update on the Phoebus Tools and Services Technology Stack

Saturday 20 September 2025 14:25 (5 minutes)

The Phoebus 5.X releases build on the existing framework by expanding the functionality of core modules and services, introducing new user-facing applications, and updating the technology stack to improve scalability, security, and long-term maintainability. The collaboration has also continued to broaden, with contributions from additional facilities, supporting Phoebus's role as a sustainable and adaptable platform for control system applications.
