## Data model based processing: missing building blocks?

*Saturday 20 September 2025 11:10 (5 minutes)*

Epics normative types allow exchanging information consistently based on data models, which – according to our experience – simplifies establishing processing chains.

Based on our personal experience we suggest to look at these processing chains using the triple: “aggregate, transform, modify”. We think that is useful to add aggregation (or enrichment) or modification of data models as flexible general records to EPICS.
