

Speed of light (electromagnetic wave) (c) is not constant in space and crisis on the theory of relativity.

Saturday 1 November 2025 17:00 (15 minutes)

The real working process of universal phenomenon is described in this paper and unraveling the misconceptions of the theory of relativity. Some experimental evidence and universal phenomenon indicates that the speed of light (c) is not constant in space. Speed of light varies one to another place in space and show relative speed in space. As which this effect predicts to existence of light wave (electromagnetic wave) propagating medium. We have called it aether medium. So this paper established aether theory again and discard to the theory of relativity because time dilation equation have derived from aether theory in this paper. Gravitational lensing gravitational redshift and blue shift, dark energy and dark matter etc phenomenon can solve easily by this innovative aether theory. New explanation of gravity is provided by this innovative aether theory. This aether theory is compatible with quantum mechanics and unsolved problems of physics can solve by this aether theory
