Characterizing optical/UV variability of AGN

Monday, 16 February 2026 14:30 (45 minutes)

Content: the lecture will discuss the behaviour of AGN variability in the optical/UV band, and its link with X-ray variability, as well as the link between variability physical properties of AGN (mass, accretion rate). Finally we will discuss the eDectiveness of optical variability to identify AGN in next generation optical surveys.

Presenter: Prof. PAOLILLO, M.
