## Modular Symmetry, Extra Dimensions, and the Origin of Flavor

*Tuesday, 20 January 2026 10:05 (35 minutes)*

This talk introduces a modular-symmetric approach to flavor, motivated by the geometry of extra dimensions. I focus on the modular  $A_4$  framework with three moduli, assigned separately to the lepton and quark sectors. At their fixed points, each modulus exhibits a residual symmetry that shapes the corresponding mass and mixing patterns.
