⋮

# What do we need for our foundation models?

---

Training procedures, like self-supervision, that enable generalized representation learning

Multi-modality, to process information from different detectors or even different experiments

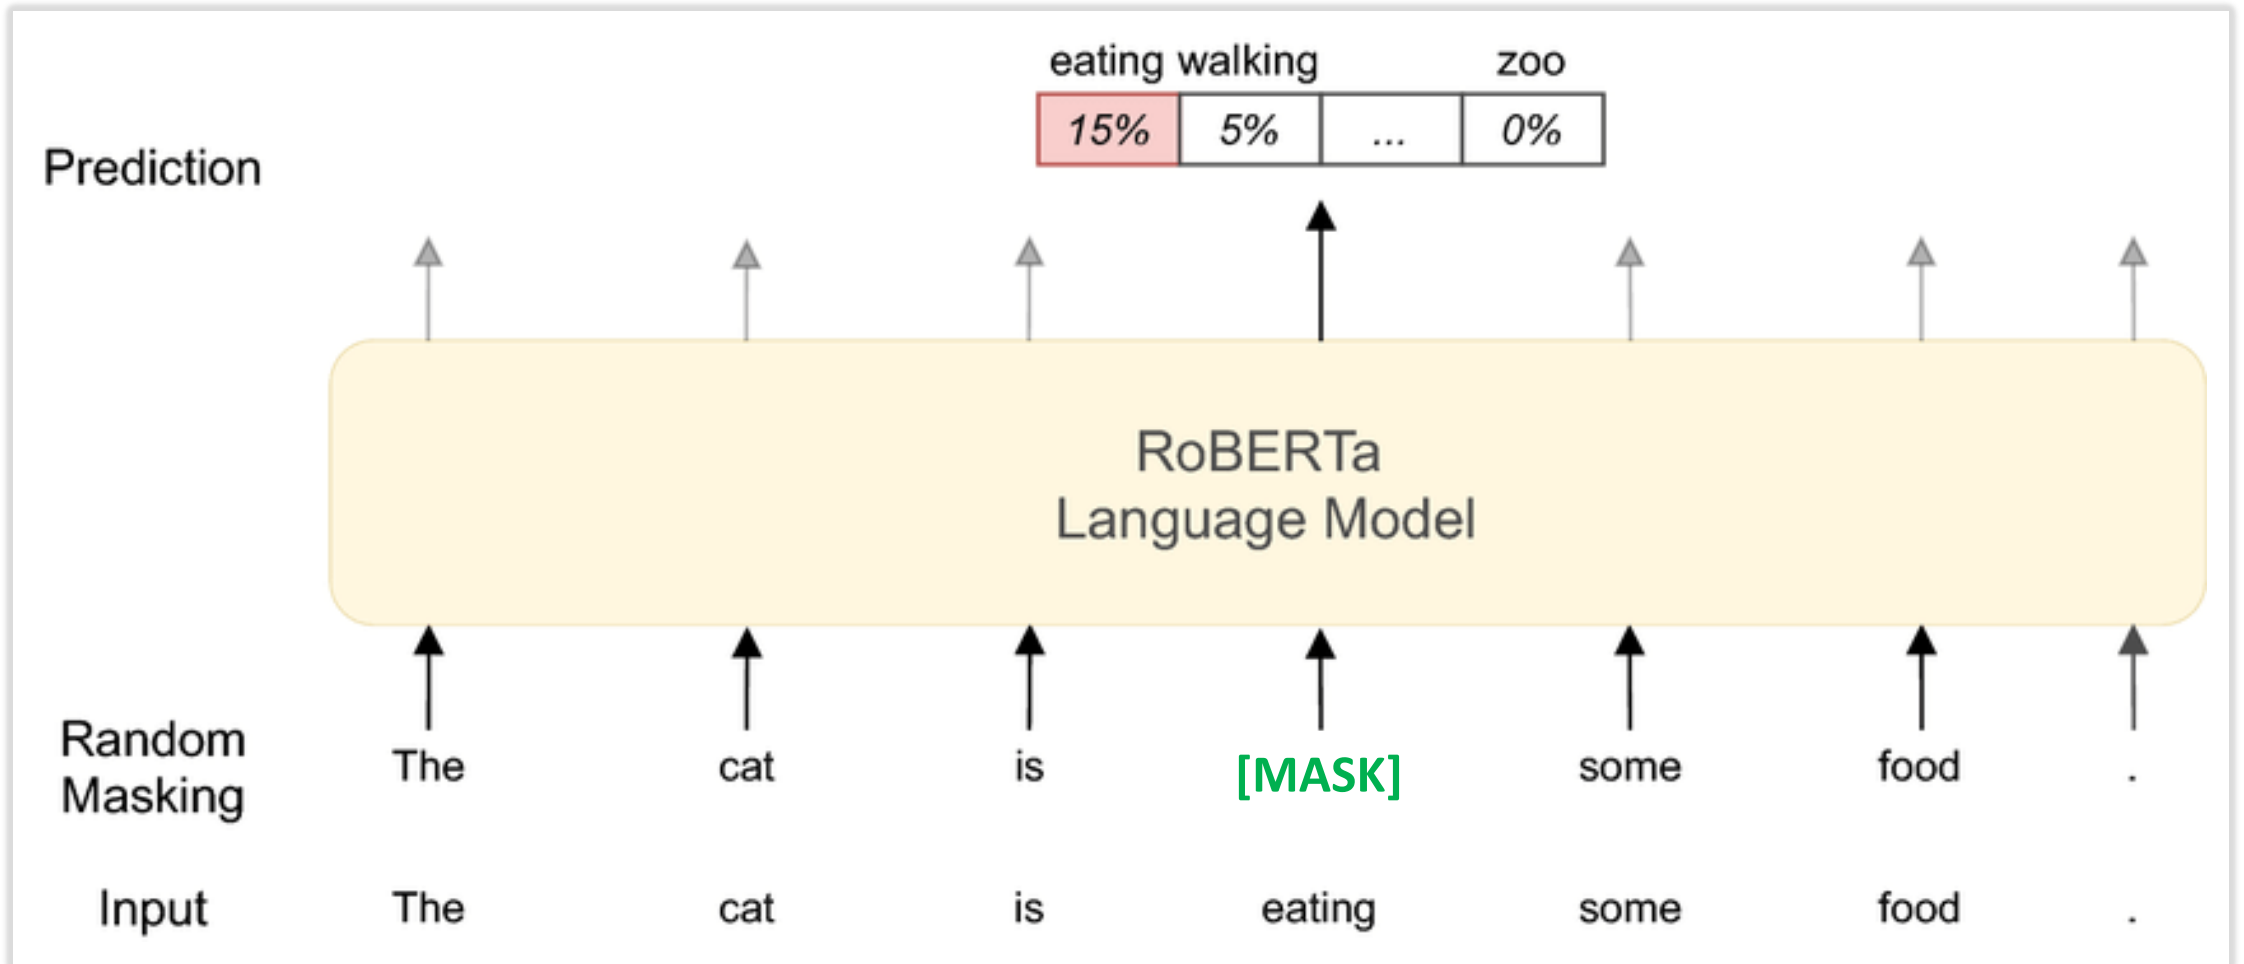

Scale, to take advantage of the large data, model, and compute limits that benefits learning

Adaptability, to put these models to use for a wide array of tasks

# Pre-training with Self-Supervision

# Masked Language Modeling

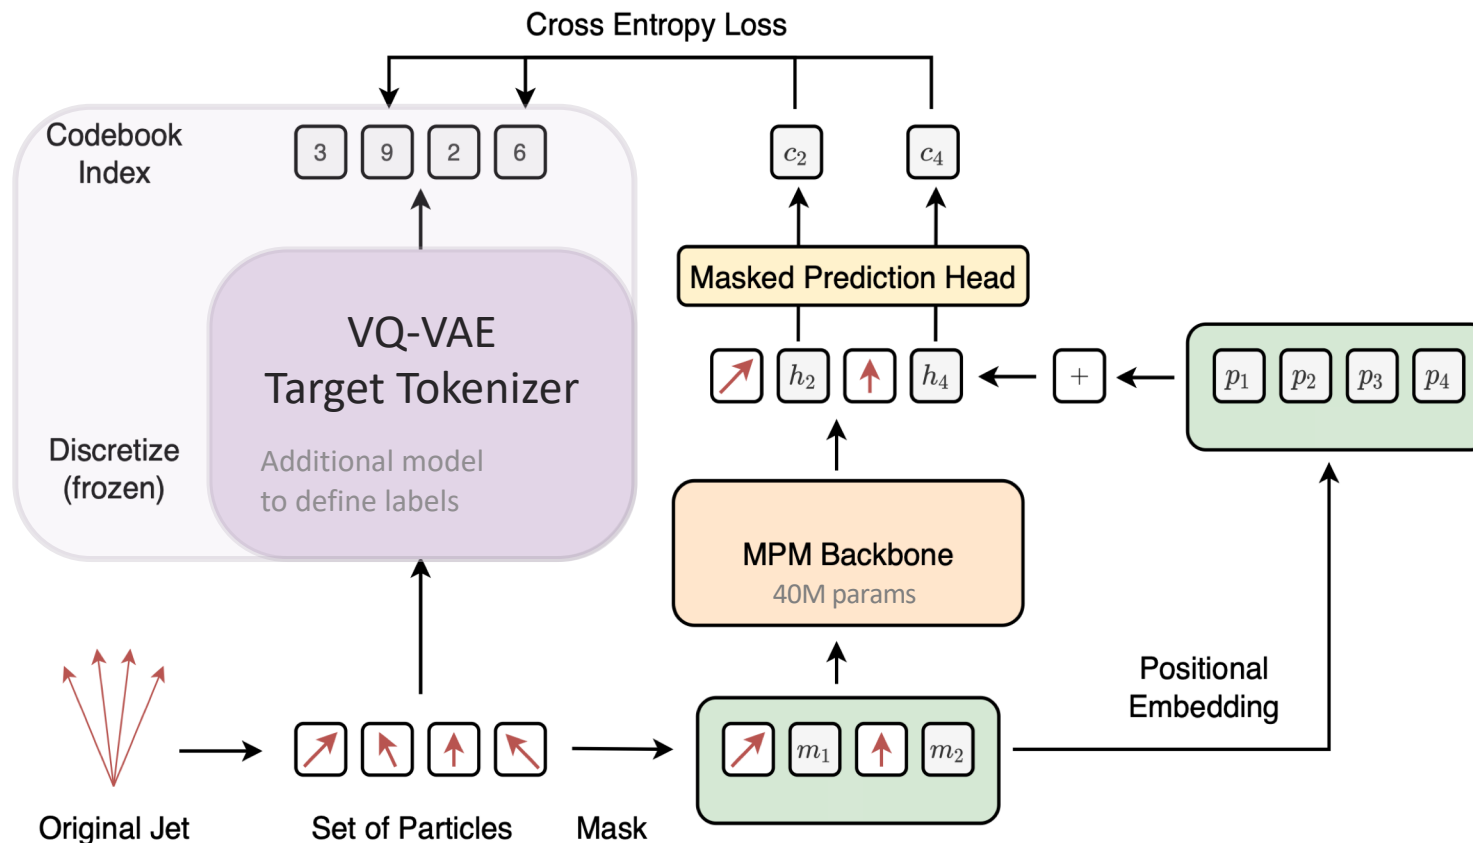

Strategy: **Mask** some elements of input sequence, then **predict missing tokens**

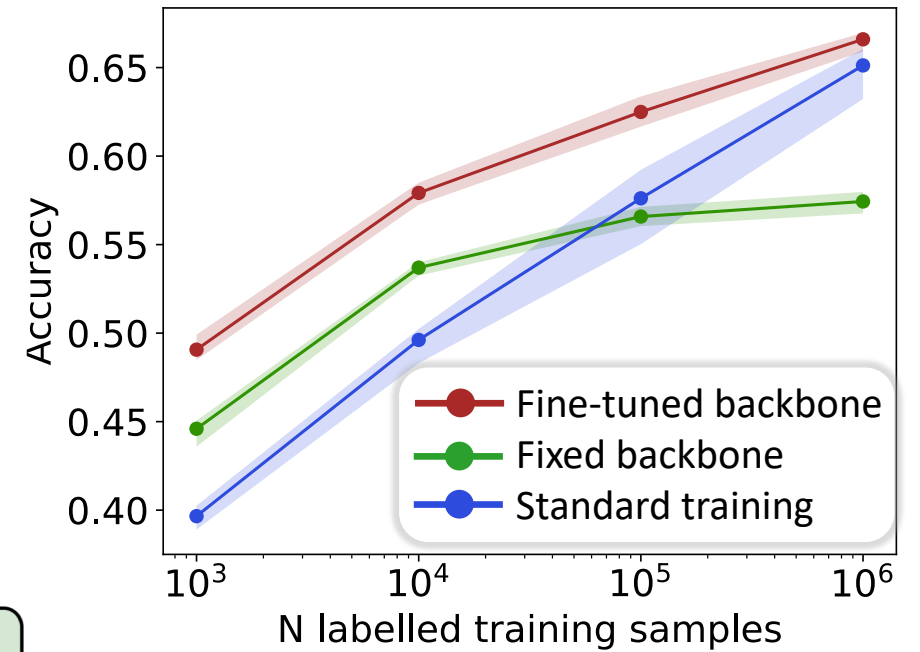

# Masked Particle Modeling

Mask individual particles, predict properties

Amenable to large-scale data-based training

10-Class Jet Classification w/ Linear Classifier

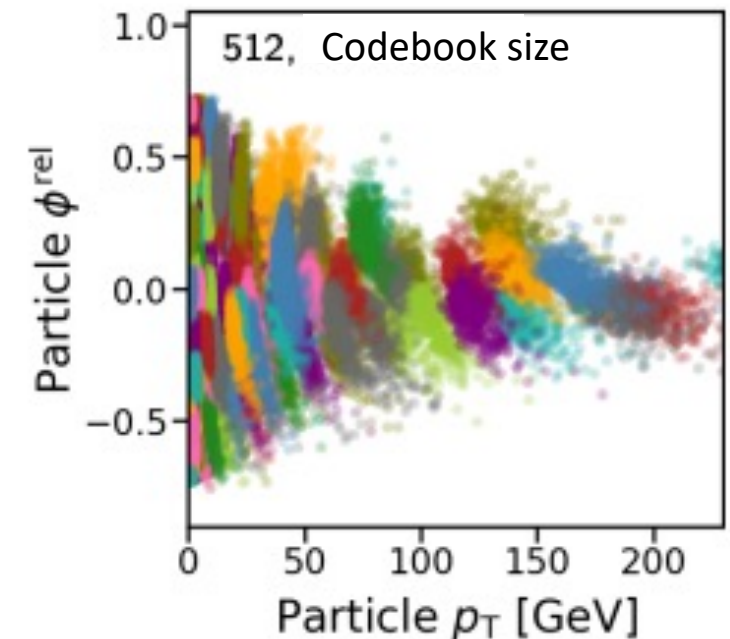

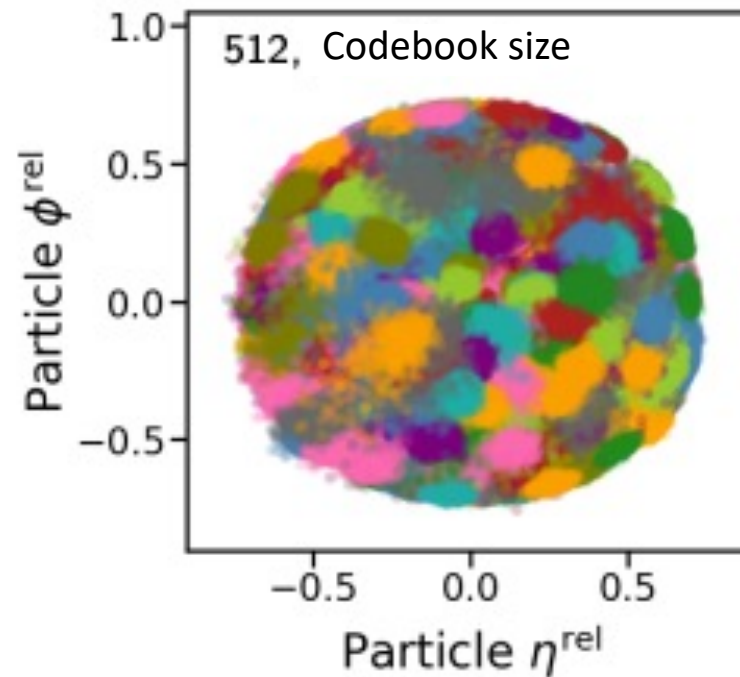

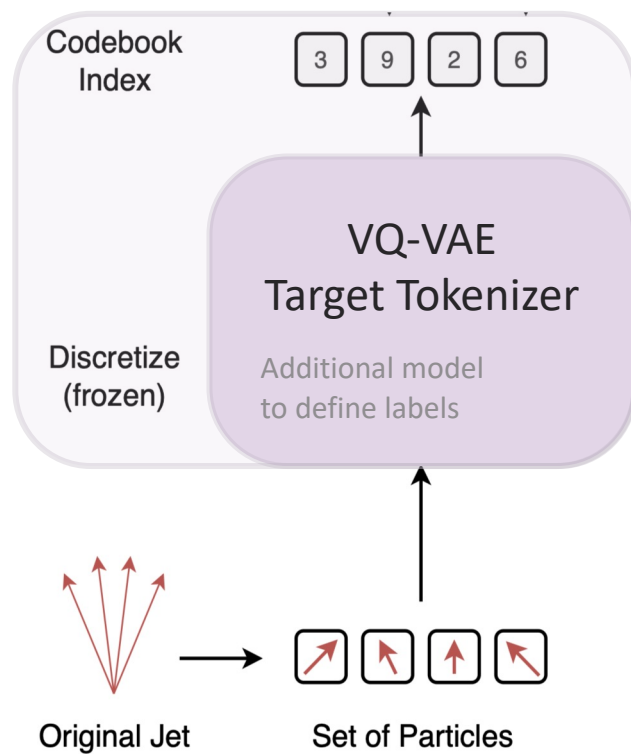

Pre-training gives better performance and better data efficiency on downstream tasks

# Tokenization

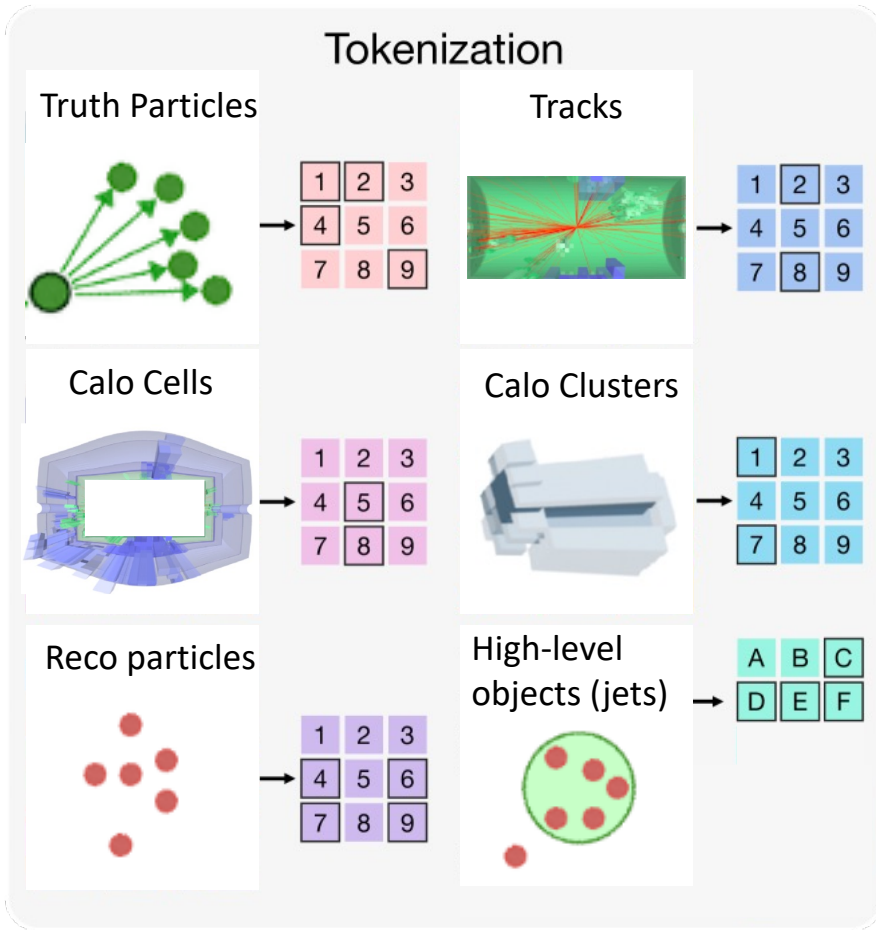

Tokenizing does “in-context” discretization and compression of data space

- Can facilitate and improve target predictions
- Poor tokenization can lead to resolution loss

# Multi-Modality

AI RESEARCH ASSISTANT: Claude Opus 4.5 (Anthropic)

January 7, 2026

### Abstract

The C-parameter distribution in  $e^+e^-$  annihilation exhibits a kinematic shoulder at  $C = 3/4$ , where three-parton final states reach their maximum and a fourth parton is required to exceed it. This boundary generates large logarithms that must be resummed. Using soft-collinear effective theory, we derive a factorization theorem involving new jet and soft functions specific to the C-parameter measurement, in which soft radiation contributes quadratically in transverse momentum. This quadratic structure explains the step discontinuity at leading order. We compute all ingredients at one loop, validate against Monte Carlo, and present matched NLL+NLO results. Unlike thrust and heavy jet mass, the C-parameter has no Sudakov–Landau pole, making momentum-space resummation straightforward. All calculations, numerical analysis, and manuscript preparation were performed by Claude, an AI assistant developed by Anthropic, working under physicist supervision.
