

# Low energy excess

- Go to <https://github.com/fewagner/excess>
- Using the resources in the repository, can you reproduce figure 20 of <https://arxiv.org/abs/2202.05097> ?
- Can you produce a similar figure of the absolute event rates, not scaled by the detector mass?  
([events/(day keV)] instead of [events/(kg day keV)])?
- Based on the github repository and the arxiv publication, is it clear what was measured and how the data was obtained?
