Su-Huai Wei is currently a Chair Professor and Dean of School of Physics at the Eastern Institute of Technology (EIT), Ningbo, China. He was Chair Professor and Director of the Materials and Energy Division at the Beijing Computational Science Research Center (CSRC). He received his B.S. degree in Physics from Fudan University in China in 1981 and his Ph.D. degree from the College of William and Mary in USA in 1985. After that, he joined the National Renewable Energy Laboratory (NREL) and was a Laboratory Fellow and Manager of the Theoretical Materials Science Group before he joined the CSRC in 2015. He moved to EIT in 2024. His research is focused on studying electronic structure theory of materials for optoelectronic and energy applications and developing first-principles calculation methods for such study. He is a Fellow of both the American Physical Society and the Materials Research Society. He has published more than 600 papers in leading scientific journals, including more than 80 in Physical Review Letters.
