

Vojtěch Bystrý

Head of Bioinformatics Core Facility
Central European Institute of
Technology, Masaryk University

Vojtěch Bystrý is a bioinformatician and Head of the Bioinformatics Core Facility at CEITEC, Masaryk University, Brno. He works on building the European genomic data infrastructure that fulfils the 1+ Million Genomes (1+MG) initiative's vision of seamless use of genomic data across an interconnected European network, focusing on federated, privacy-preserving analysis of sensitive human data. He is an active member of the ELIXIR Federated Human Data community, contributing to standards and services for cross-border genomic data access. He is helping to build the OmiCZ genomic data repository, which will be part of the EOSC implementation in the Czech Republic. Beyond genomic data infrastructure and AI, his interests span cancer genomics, immunogenetics, and multi-omics.
