

Alex Ioannidis

Zenodo Service Manager
European Organization for Nuclear
Research (CERN)

Alex Ioannidis is a software engineer in the Open Science Infrastructure section at CERN and the service manager of Zenodo, a digital repository for the long tail of research and home of the EU Open Research Repository, which currently hosts more than 160k EU-funded research outputs. He also serves as Principal Architect of Invenio, guiding global teams to build open-source platforms that advance open science and research sharing. With many years of experience in the field, he coordinates developers to design scalable systems for sharing scientific outputs in a user-friendly and FAIR-by-design manner. His current work explores AI-assisted deposition and curation, helping researchers produce richer, machine-actionable metadata with less manual effort.
