

Anca Hienola

Chief of Open Science
Finnish Meteorological Institute
(FMI)

Anca Hienola is a physicist and climate scientist who moved from studying the atmosphere to rethinking how science itself works. With more than two decades in atmospheric and climate research, she now works at the intersection of Open Science, research infrastructures and Europe's evolving digital research ecosystem. As Chief of Open Science at the Finnish Meteorological Institute, she focuses on turning FAIR principles from policy ambitions into practices and services that actually work for researchers. She has been involved in major EOSC related initiatives including ENVRI-FAIR, OSCARS and EOSC-Future, and currently coordinates the ENVRI EOSC Node. She is also a member of the IPCC Task Group on Data, bringing scientific, infrastructure and policy perspectives together.
