

Heinrich Widmann

Scientific Programmer
German Climate Computing Center
(DKRZ)

Heinrich Widmann is a scientific programmer at the German Climate Computing Center (DKRZ) in Hamburg, Germany, with more than 20 years of experience in research data management, particularly in Earth system modelling and related disciplines.

Within DKRZ's Data and Analysis department, he works on metadata enrichment and FAIR assessment of the World Data Center for Climate (WDCC), DKRZ's long-term data archive. He developed B2FIND, EUDAT's interdisciplinary metadata discovery service, and has contributed to several European and EOSC-related projects. He is currently involved in EOSC AquaINFRA and is a member of the EOSC Task Force Semantic Interoperability.

His work focuses on research data management, metadata, FAIR data, data discovery, and semantic interoperability across scientific domains.
