

Francisco Rey Garduño

Researcher, Institute of Biomedicine
of Seville and Virgen del Rocío
University Hospital

Francisco Rey Garduño is a Computer Engineer at Hospital Universitario Virgen del Rocío (HUVR) in Seville, working with the Institute of Biomedicine of Seville (IBiS) on health-data infrastructure. He has 2 years of experience in health informatics, focusing on secure, interoperable and federated access to clinical data. He currently leads the technical deployment of FEDERA Salud, an initiative bringing the European Commission's SIMPL middleware into a large public hospital to build an EHDS-aligned health data space. His work centres on connecting real healthcare organisations to European federated data ecosystems such as EOSC and the European Health Data Space.
