Using MCMC techniques in a scattering amplitude analysis

Friday 15 November 2019 13:40 (10 minutes)

In addition to more classic parameter estimation techniques, MCMC techniques can be implemented to complement these methods as a further analysis tool. These tools become especially useful when the dimensionality of parameter spaces become high, as is the case with the three pion production channel that will be a focus of this analysis.

Presenter: WISHART, Robert (University of Glasgow)
