## Modelling Backgrounds and Searching for WIMPs in DEAP-3600

*Tuesday 9 April 2019 11:00 (15 minutes)*

DEAP-3600 is single-phase liquid argon (LAr) direct-detection dark matter experiment, operating 2 km underground at SNOLAB, Sudbury, Canada. The detector consists of 3279 kg of LAr contained in a spherical acrylic vessel.

In this talk, a summary of the second dark matter search analysis of a 758 tonne-day exposure will be presented with emphasis given to modelling the detector backgrounds.

**Presenter:** WALDING, Joseph (University of London (GB))

**Session Classification:** Parallel stream 2
