Latest results from the B factories

Monday 16 June 2014 15:45 (30 minutes)

Since the end of data taking in 2008, the BABAR experiment at the SLAC National Accelerator Laboratory, along with its Japanese counterpart, Belle, has continued to produce interesting scientific results spanning a broad range of topics in heavy flavour physics, QCD and searches for physics beyond the standard model. In this talk I will discuss ongoing activities of the BABAR collaboration and present recent highlights from the ongoing physics programs of BABAR and Belle.
