Neutrino Oscillations

- Already been introduced several times to oscillations
- Important part is that we need to know the energy (E) and the distance traveled (L)

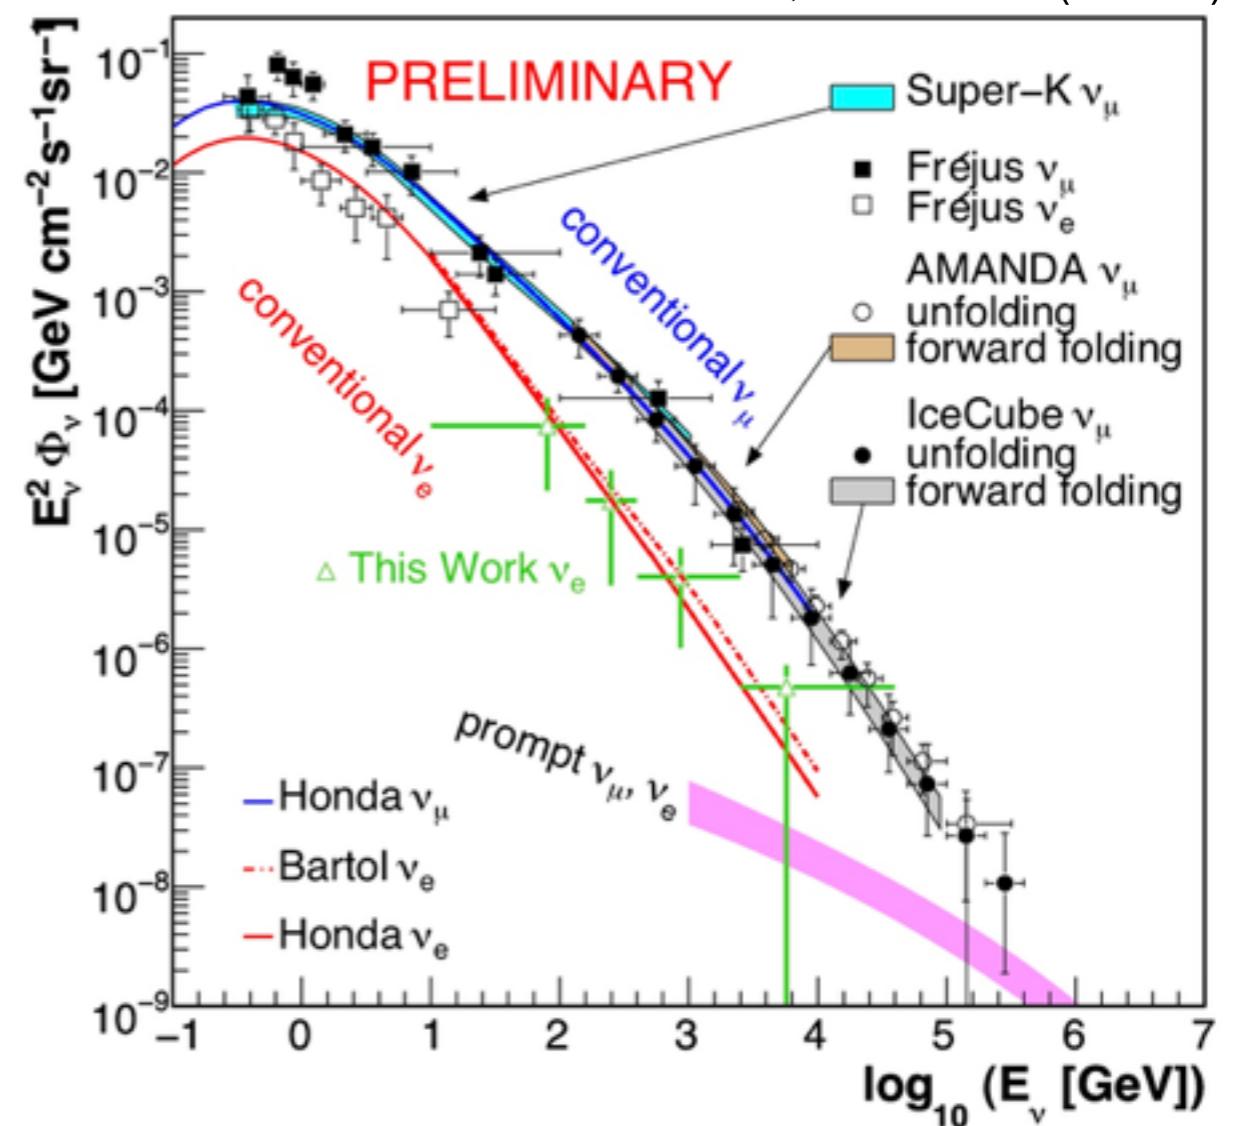

$$P(|\nu_\alpha\rangle \rightarrow |\nu_\beta\rangle) = \sin^2 2\theta \sin^2 \left(1.27 \Delta m^2 \frac{L}{E} \right)$$

Neutrino Oscillations

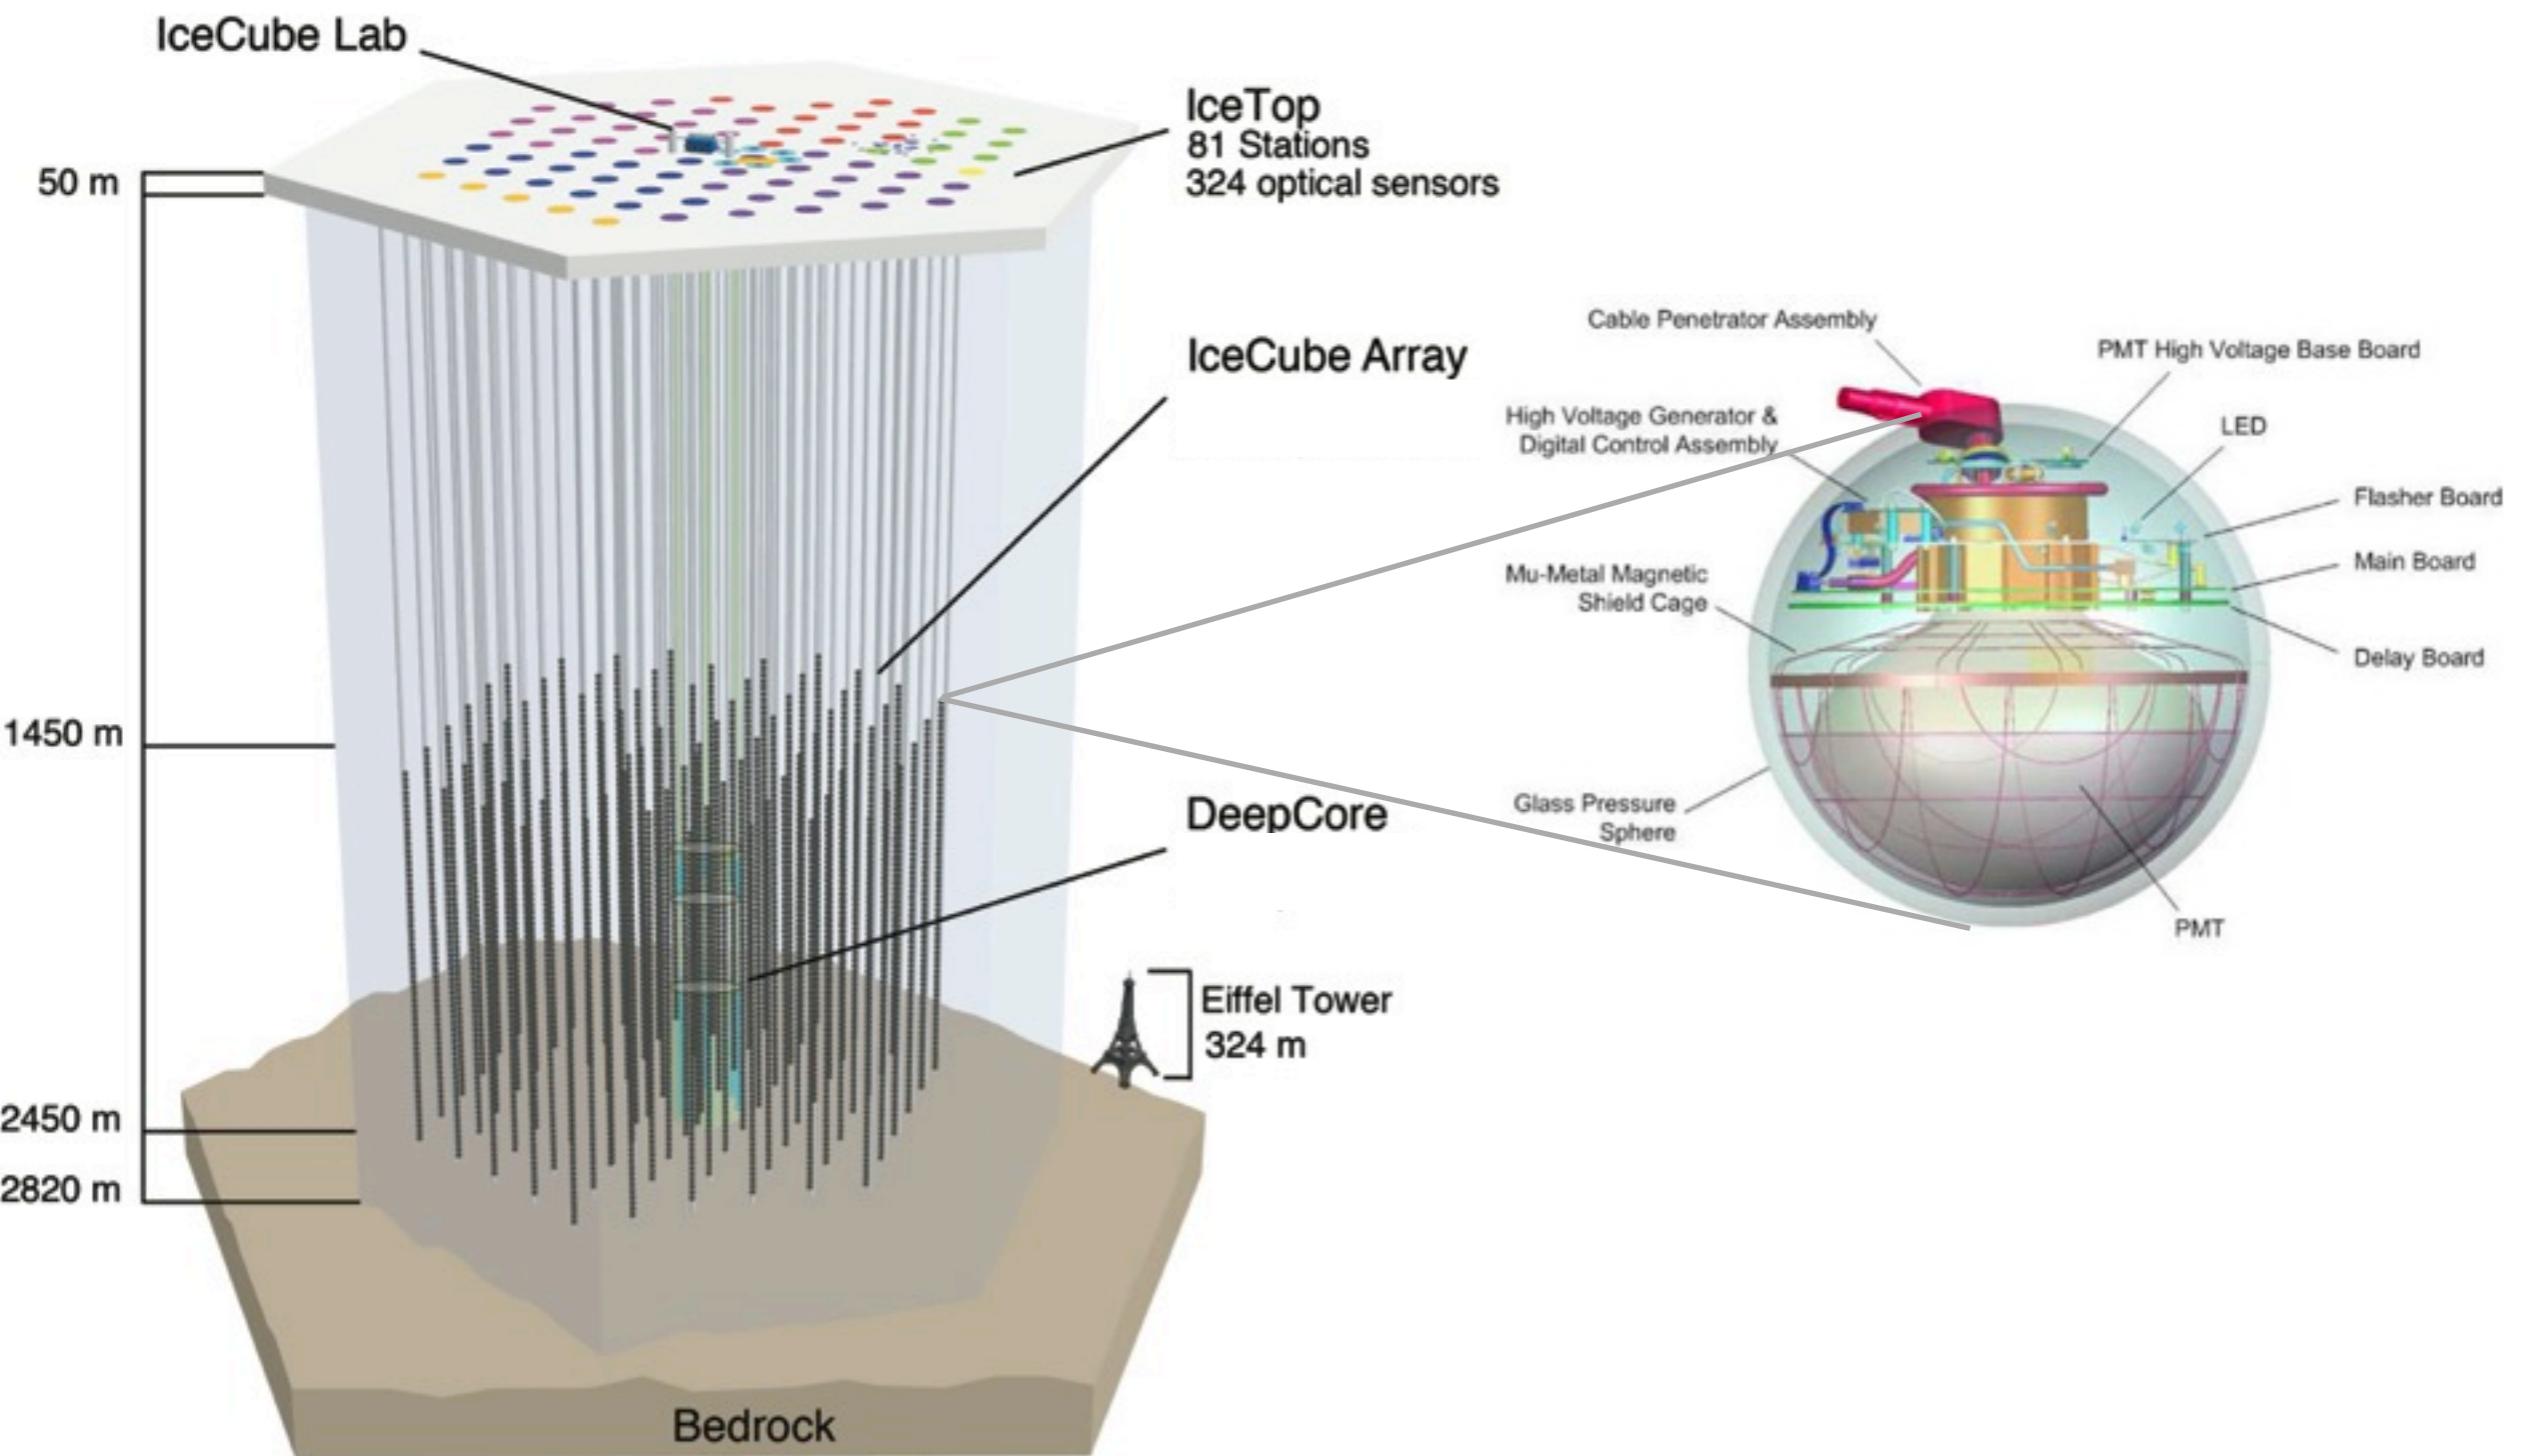

E

PRL 110, 151105 (2013)

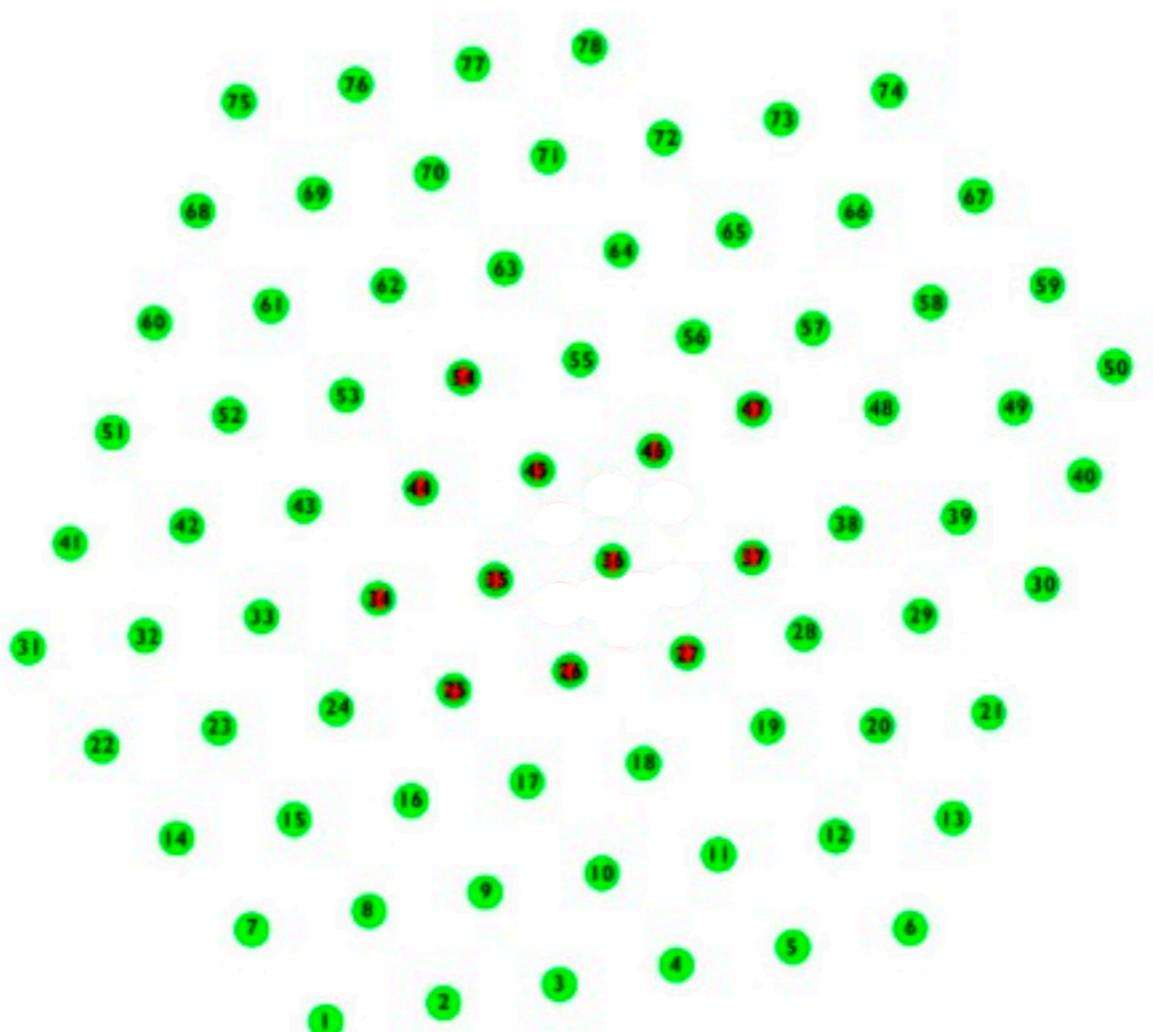

The IceCube Neutrino Telescope

IceCube

- 78 Strings
- 125m string spacing
- 17m DOM spacing

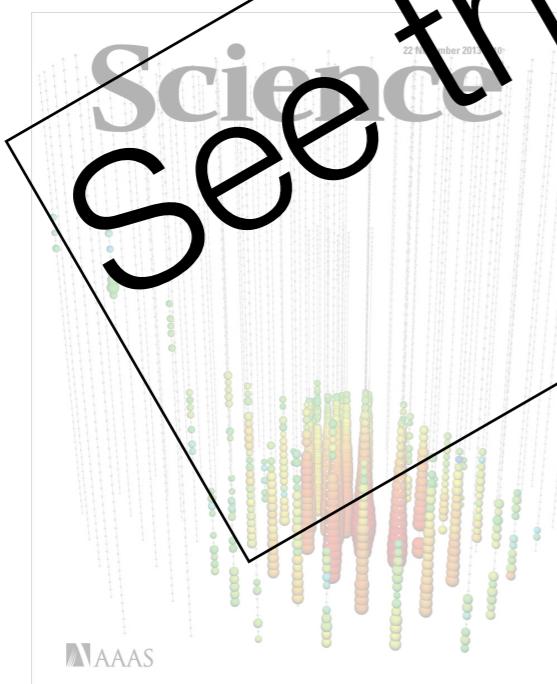

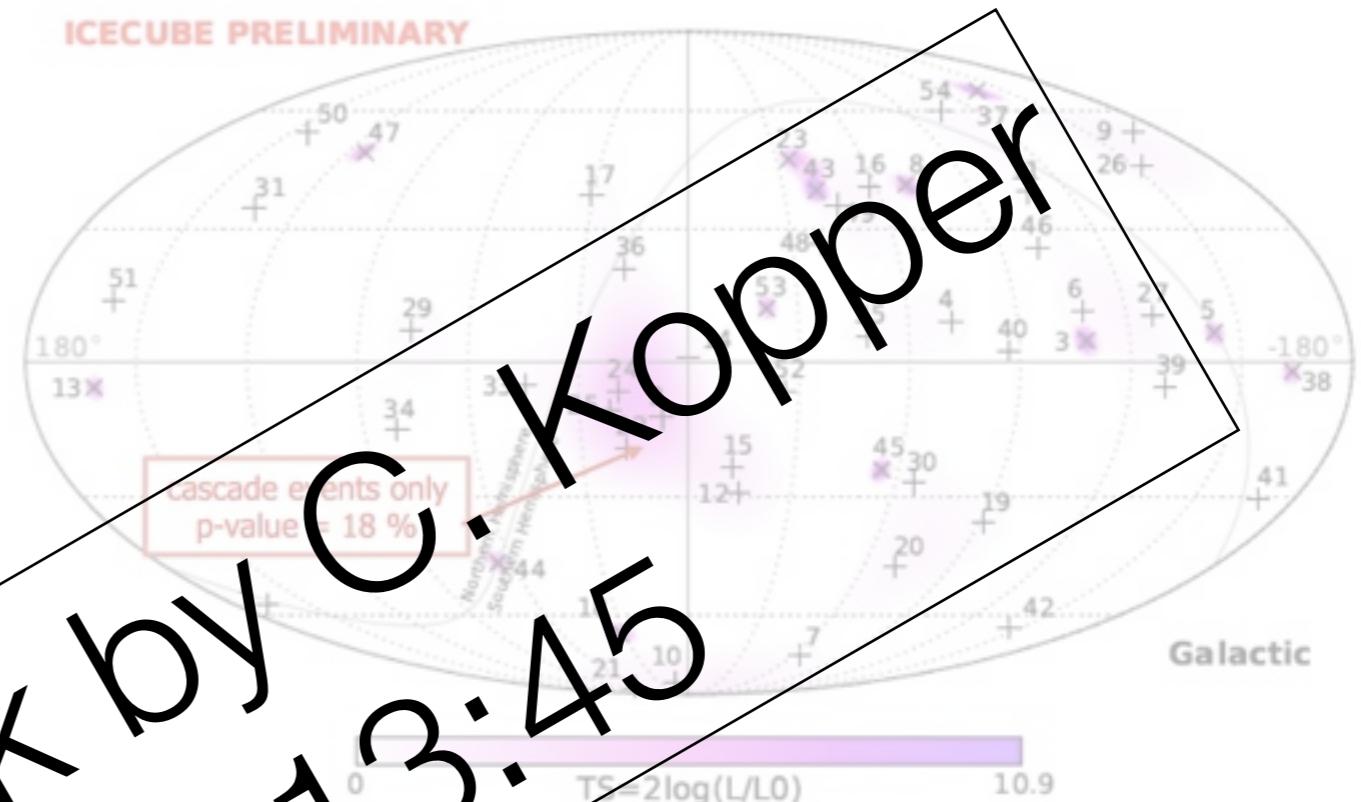

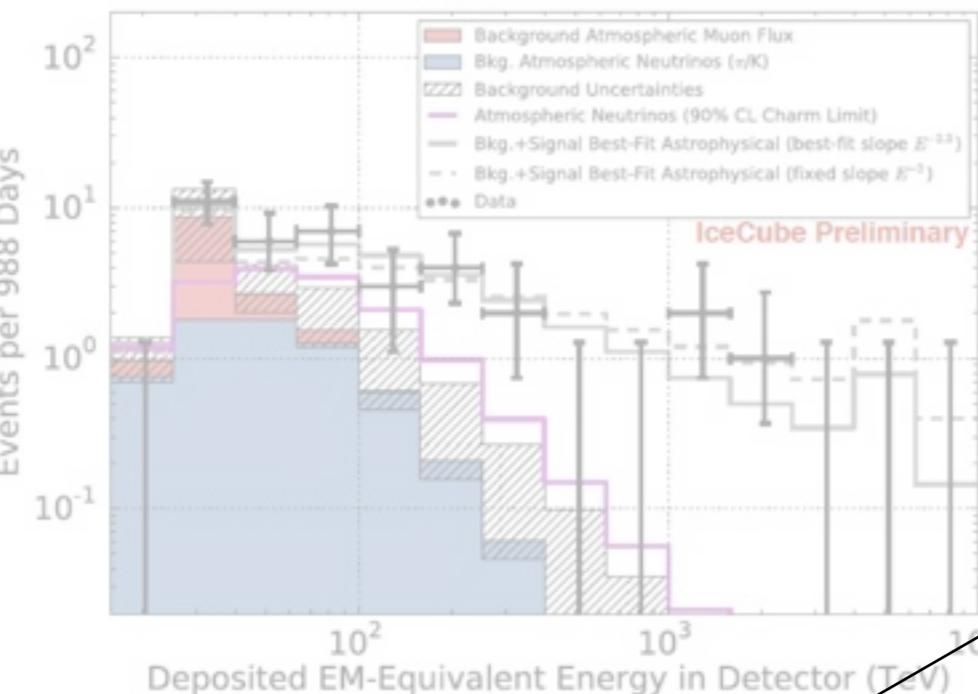

10 MeV 100 MeV 1 GeV 10 GeV 100 GeV 1 TeV 10 TeV 1 EeV

IceCube

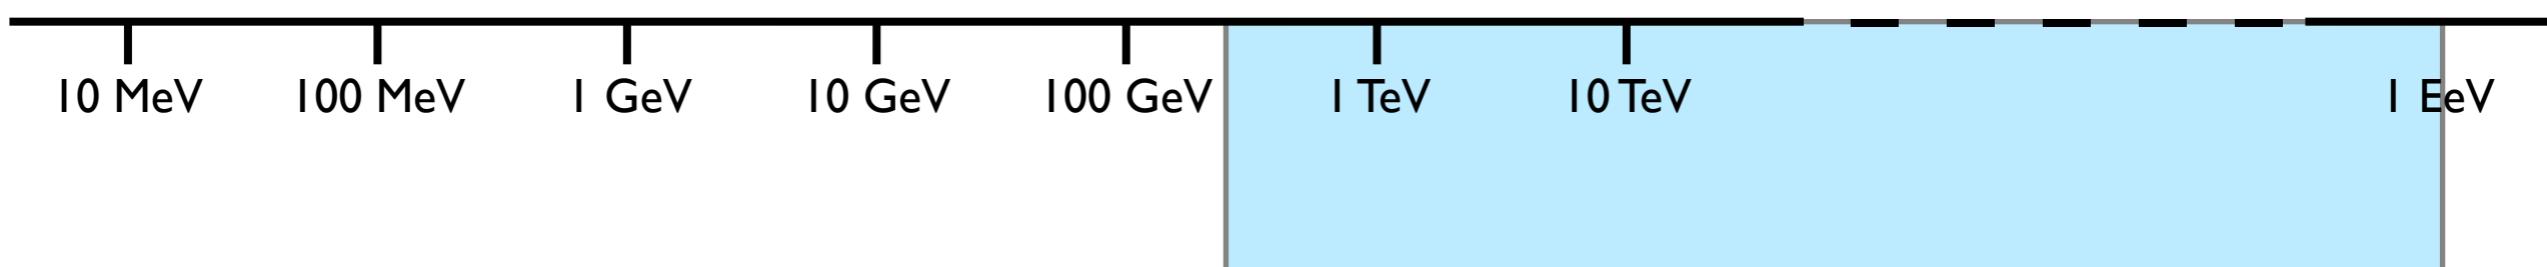

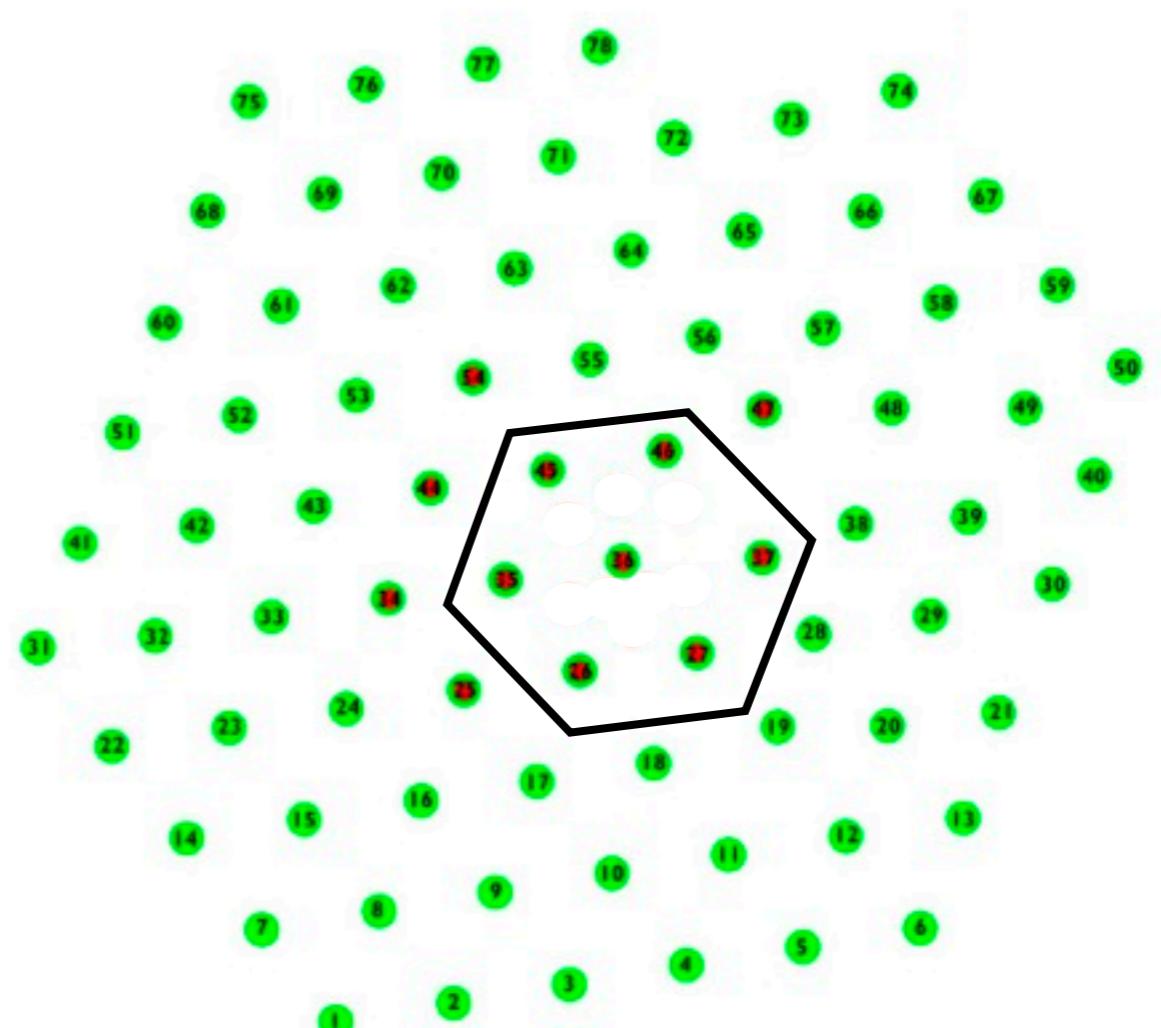

IceCube Results

See the talk by C. Kopper
W2-7, 13.45

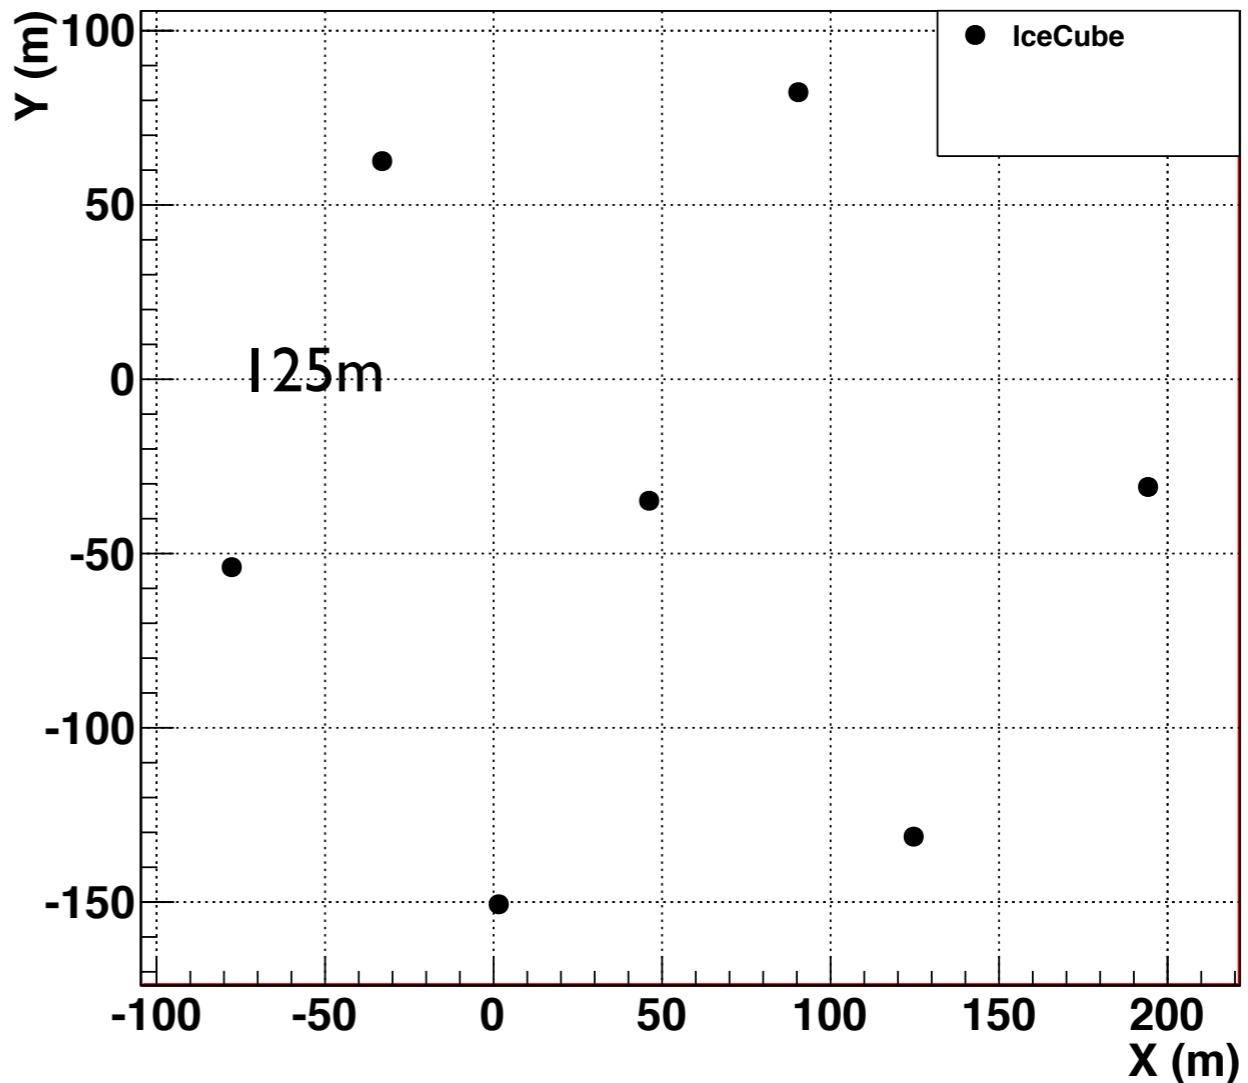

IceCube

- 78 Strings
- 125m string spacing
- 17m DOM spacing

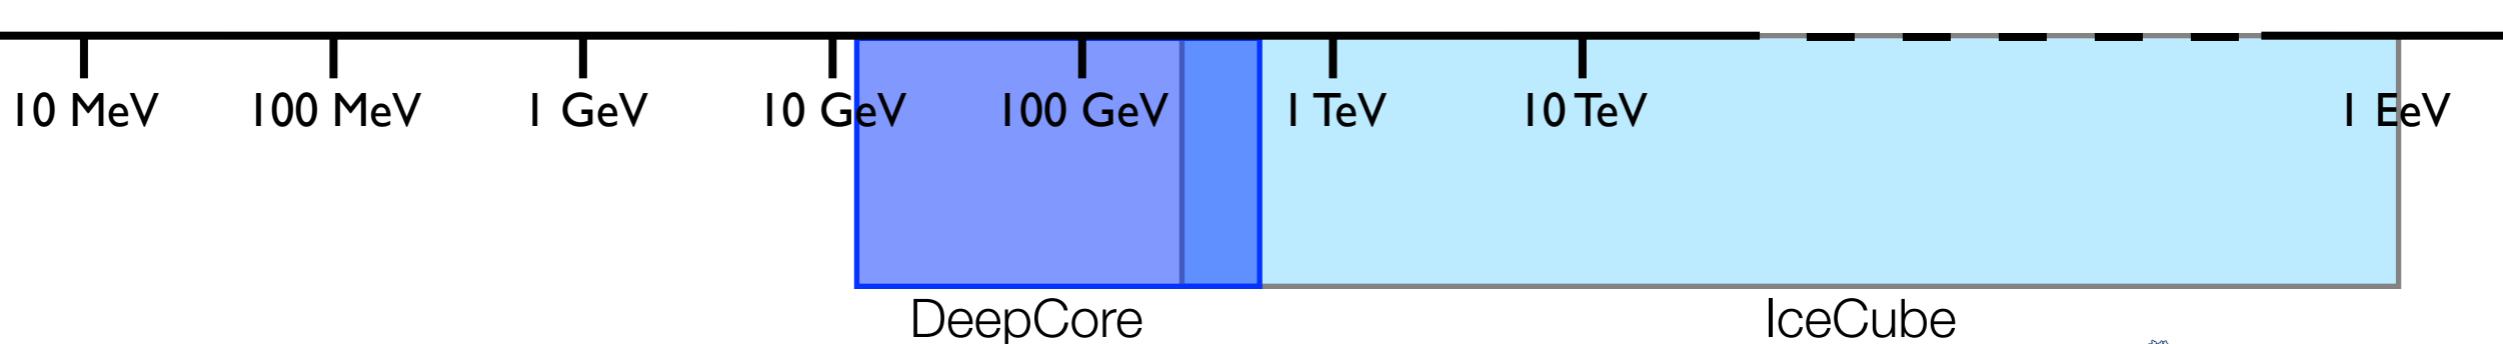

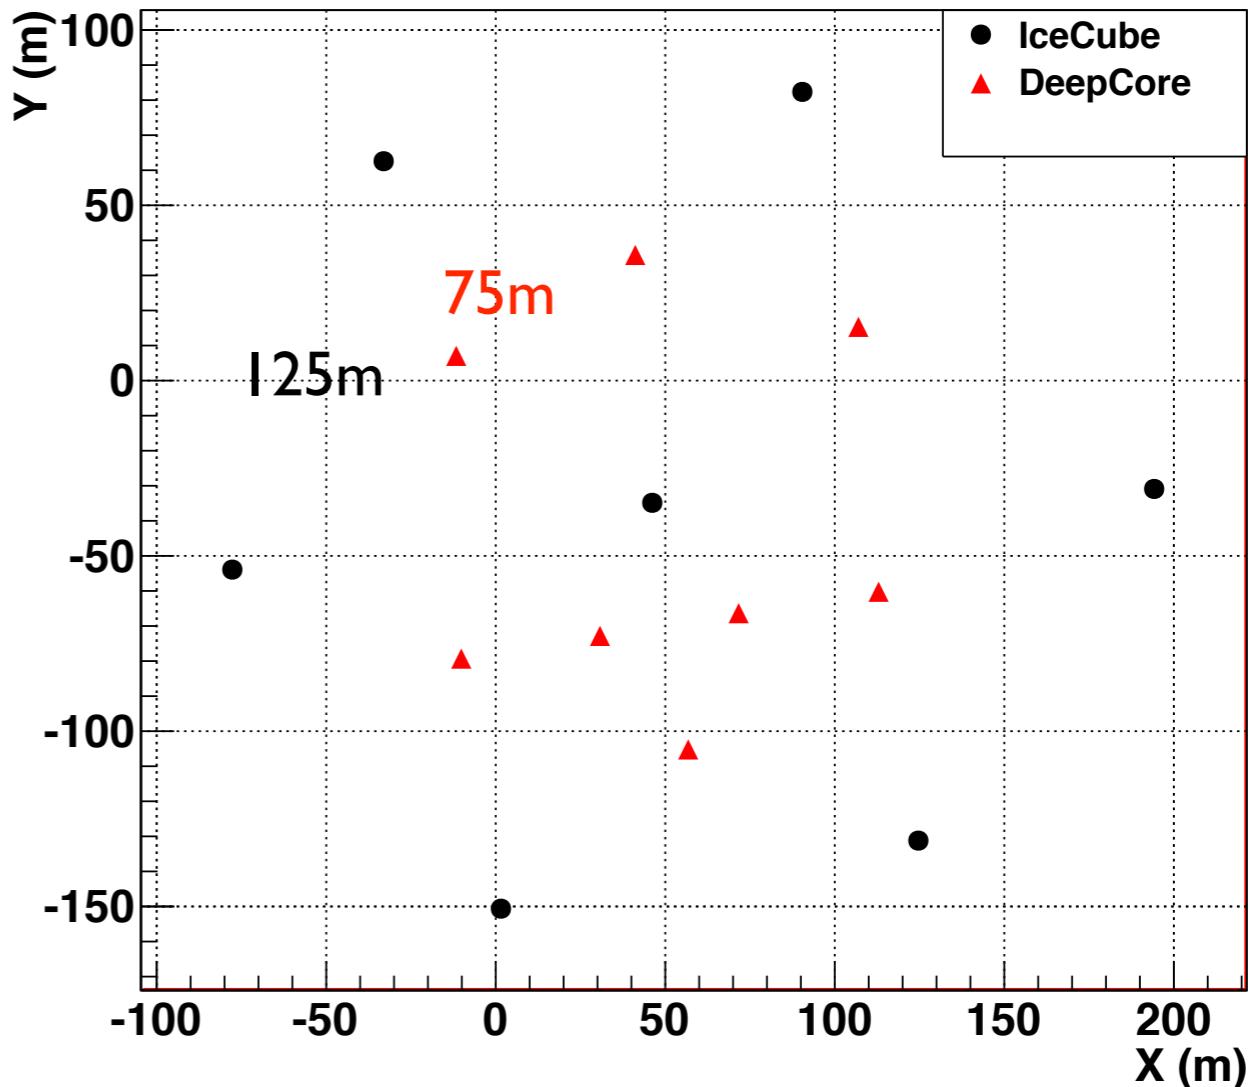

IceCube

- 78 Strings
- 125m string spacing
- 17m DOM spacing

IceCube + DeepCore

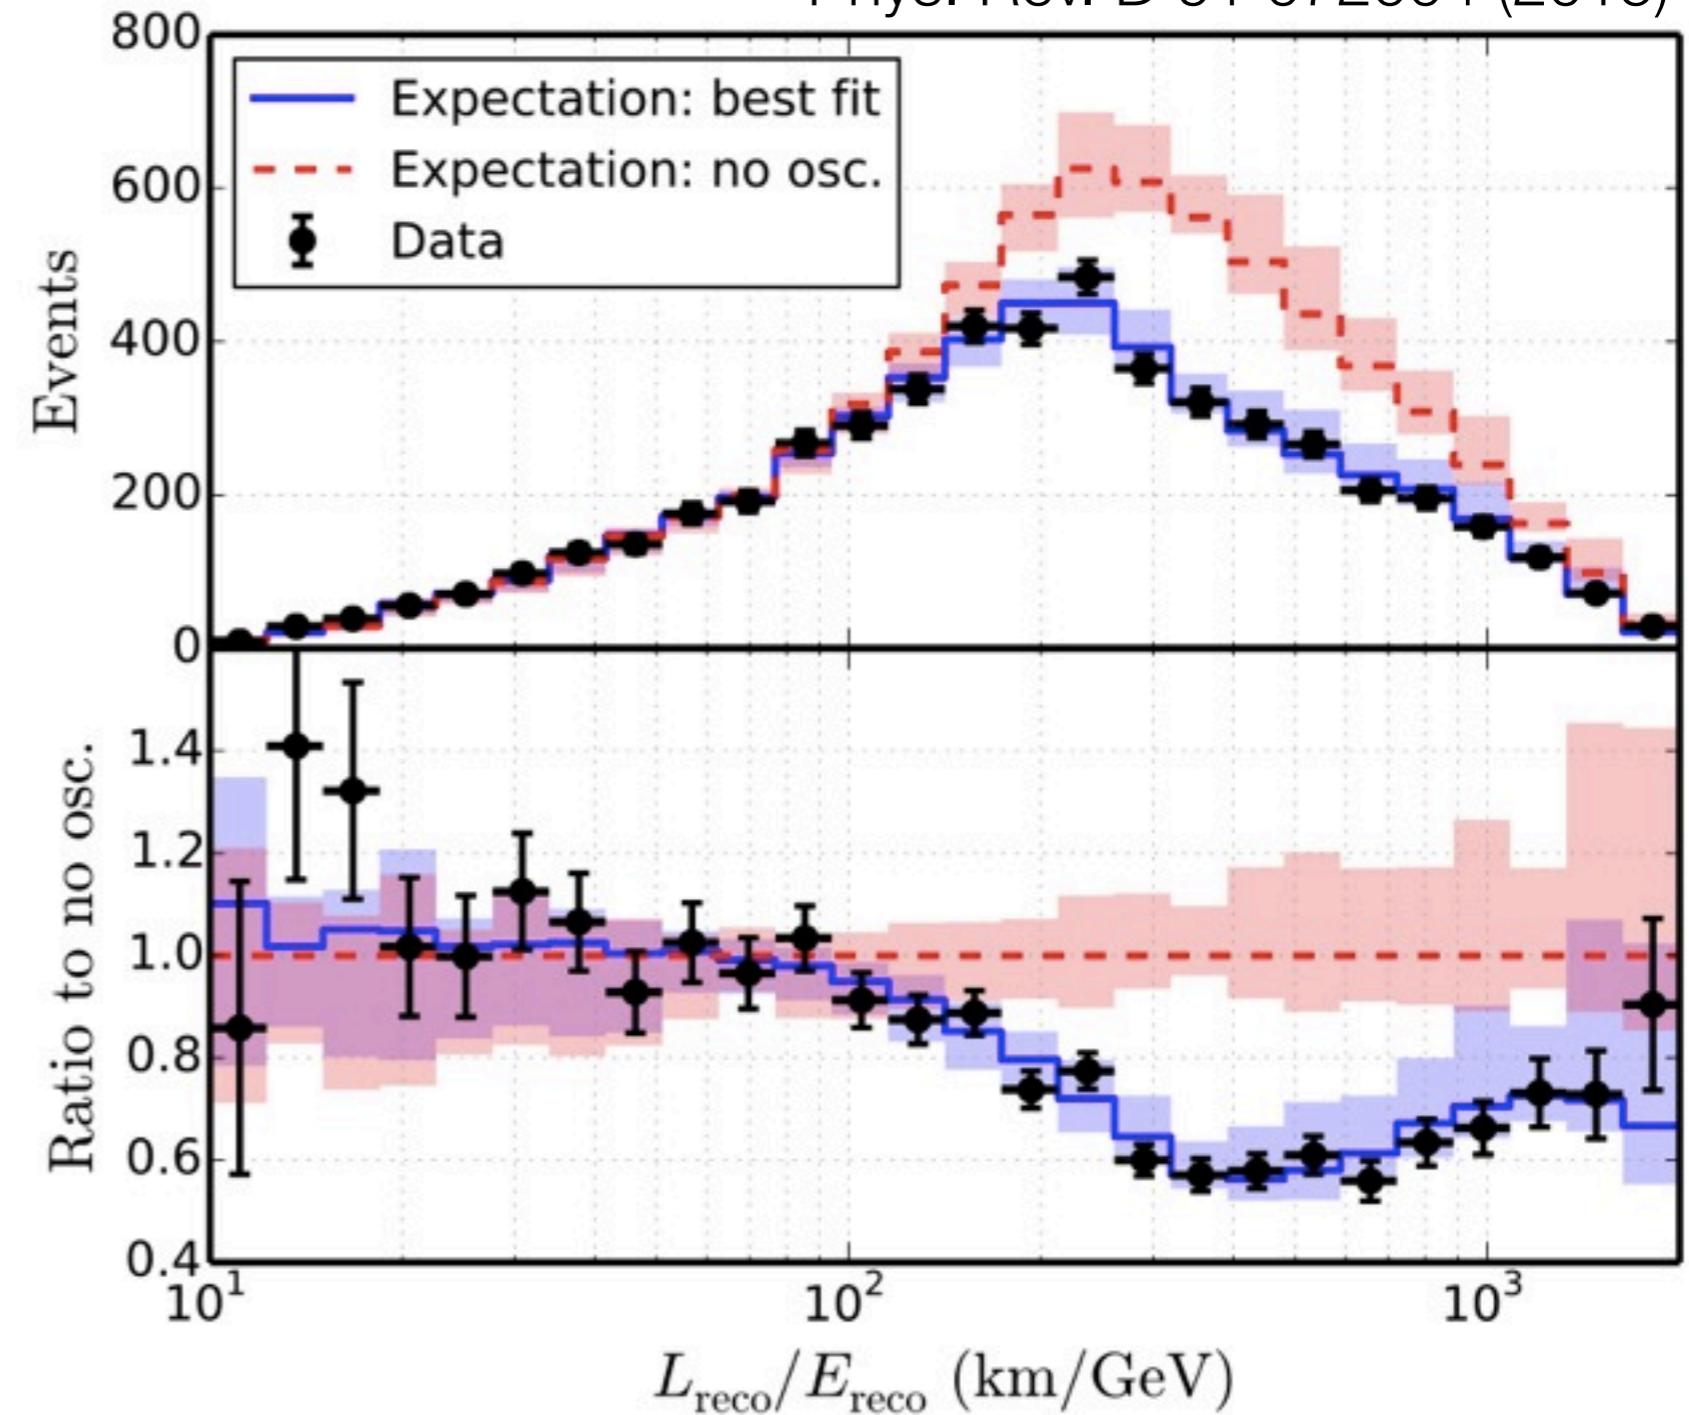

- 78 Strings
 - 125m string spacing
 - 17m DOM spacing
- Add 8 strings
 - 75m string spacing
 - 7m DOM spacing

DeepCore Results

Phys. Rev. D 91 072004 (2015)

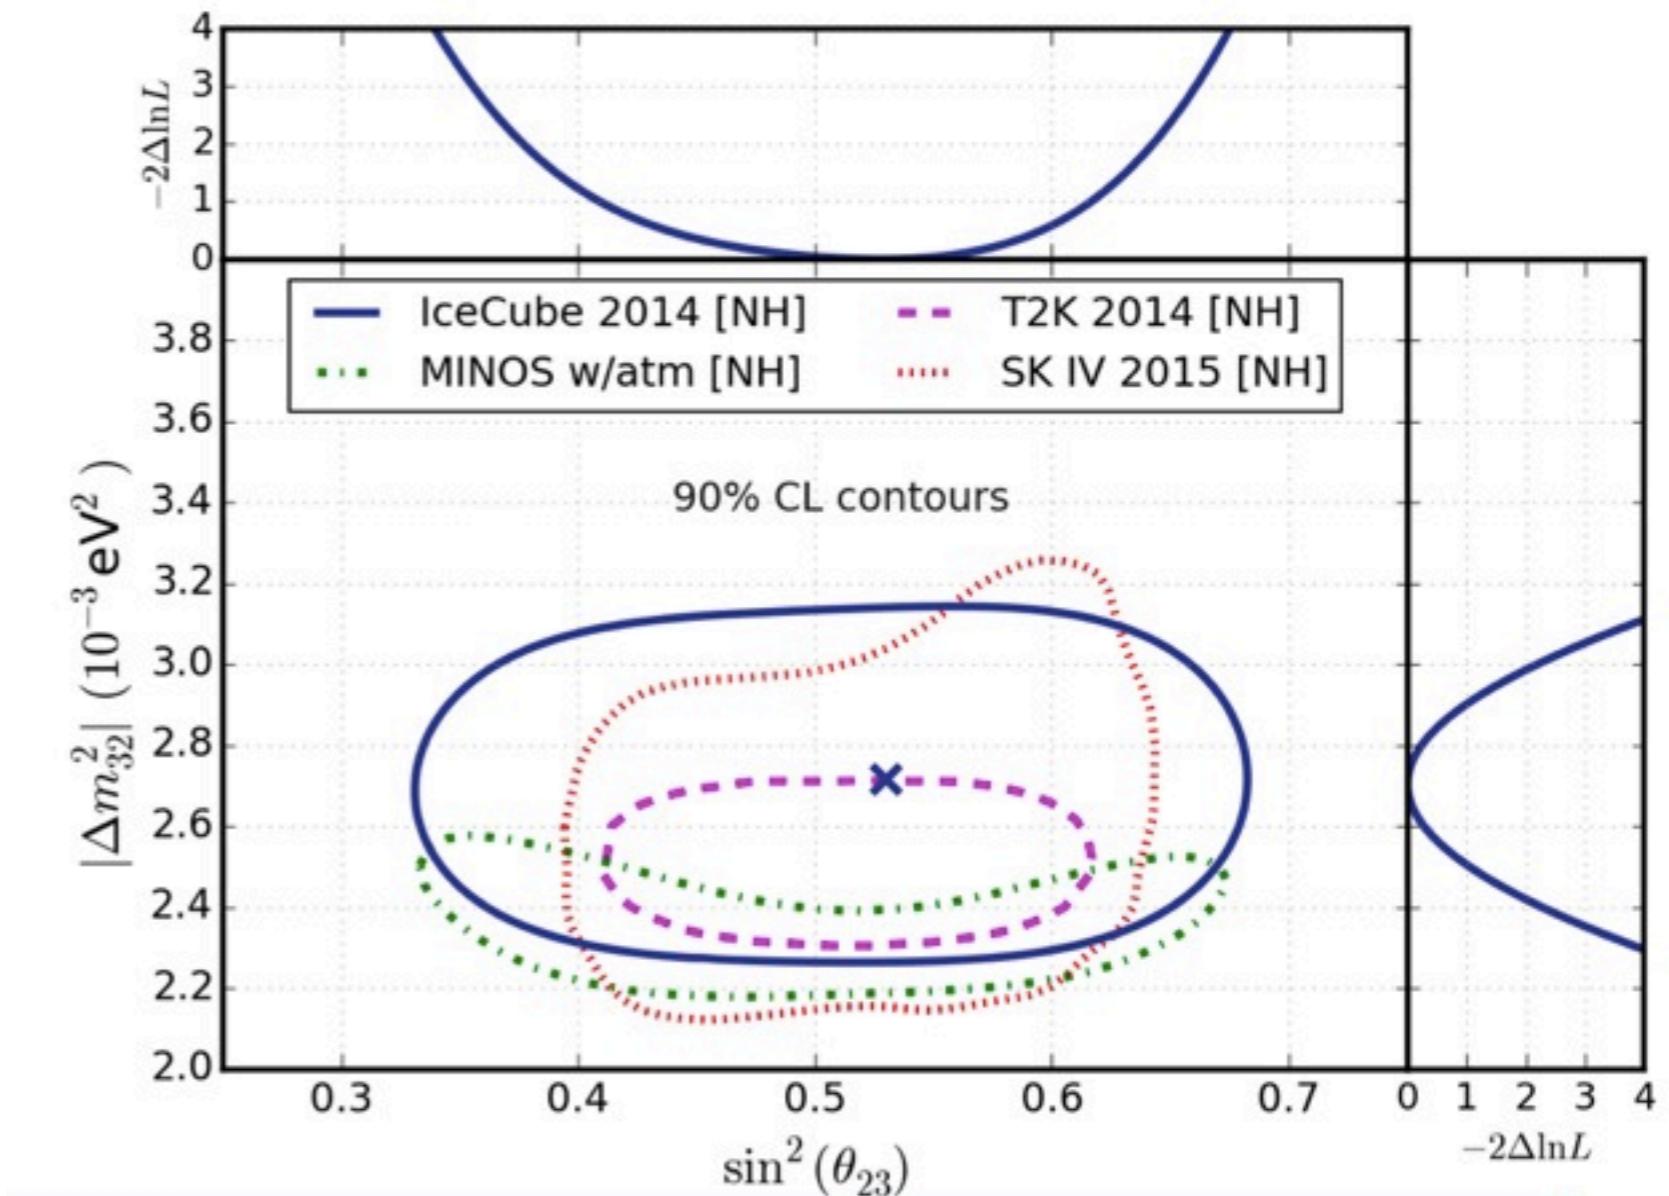

- Approximately 3 years of data analyzed
- High rate in detector provides large event sample

DeepCore Results

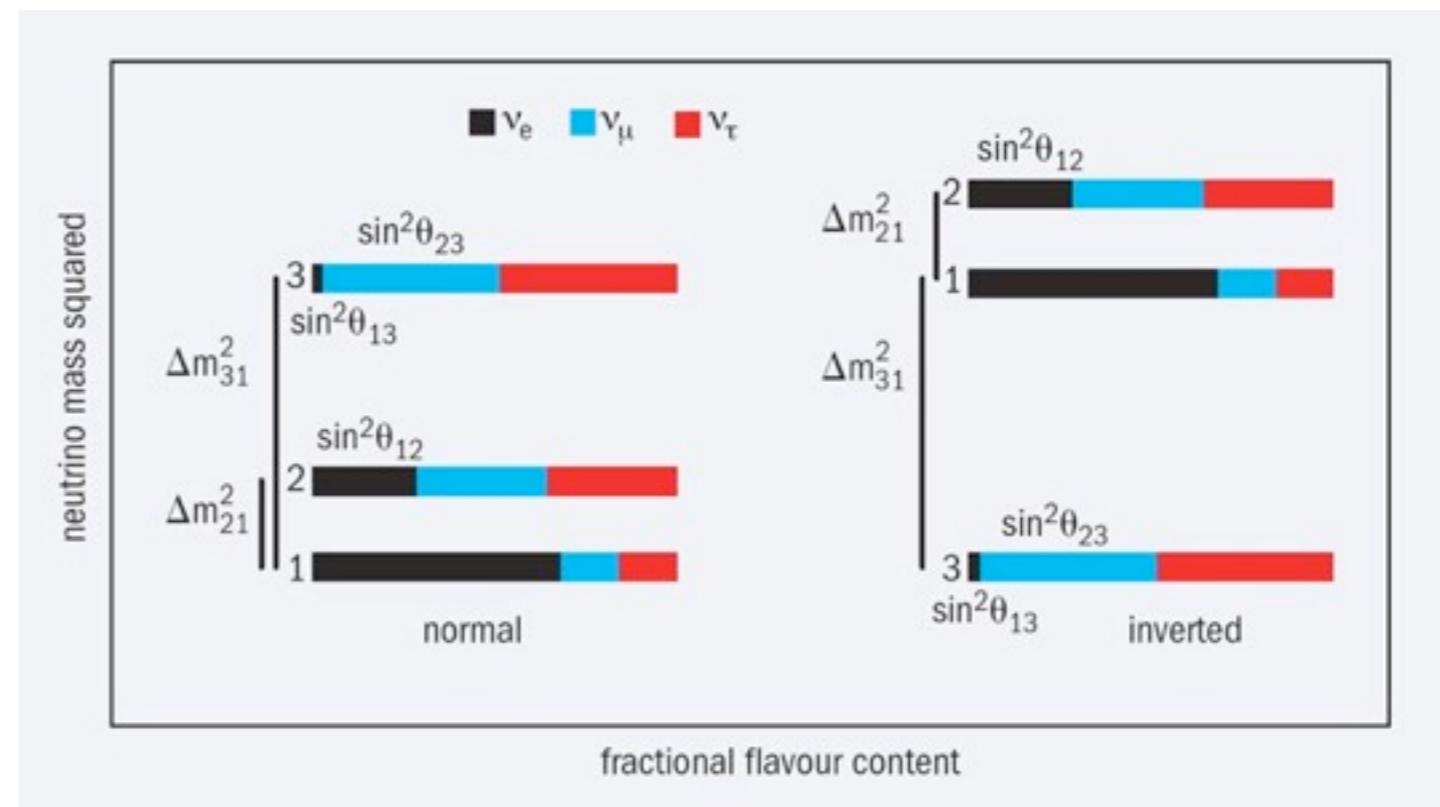

- Approximately 3 years of data analyzed
- High rate in detector provides large event sample
- Oscillation parameter constraints approaching those of dedicated experiments

Phys. Rev. D 91 072004 (2015)

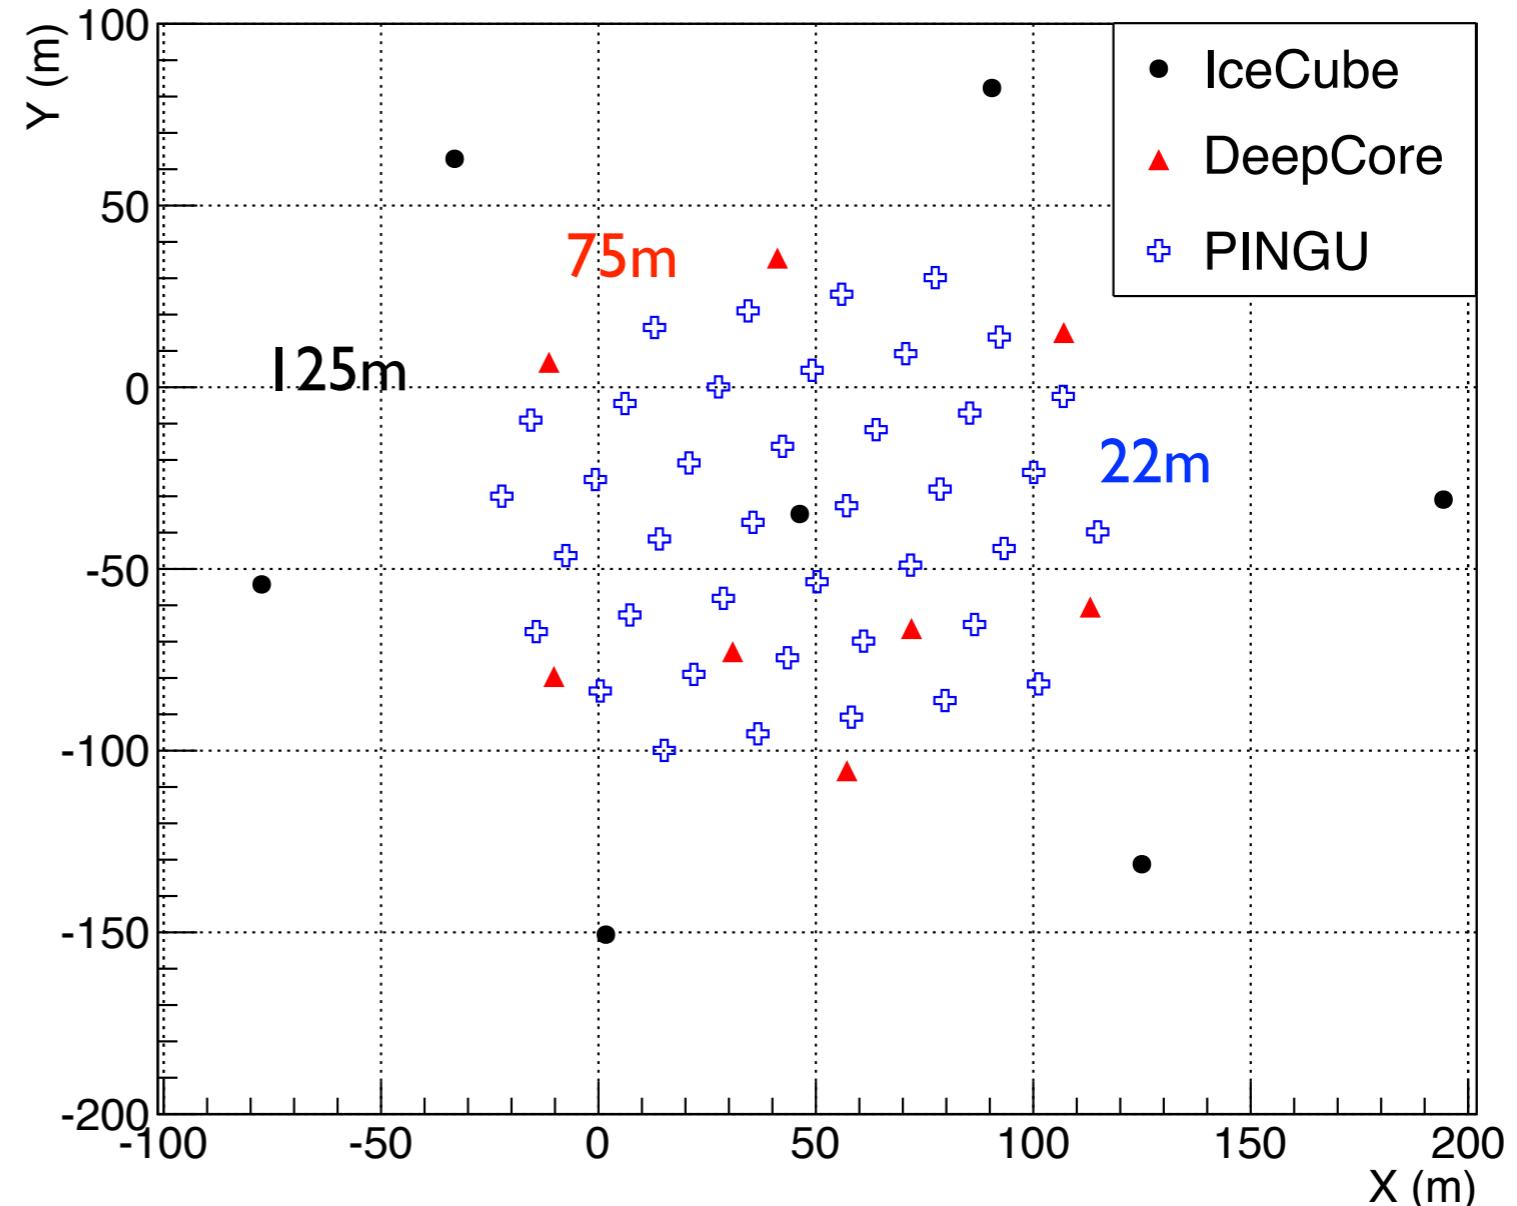

Even Lower Energies

- Deep Core is a success, but we get access to more physics with a lower threshold
- muon neutrino disappearance
- maximal θ_{23} measurement
- lower energy dark matter
- neutrino mass hierarchy

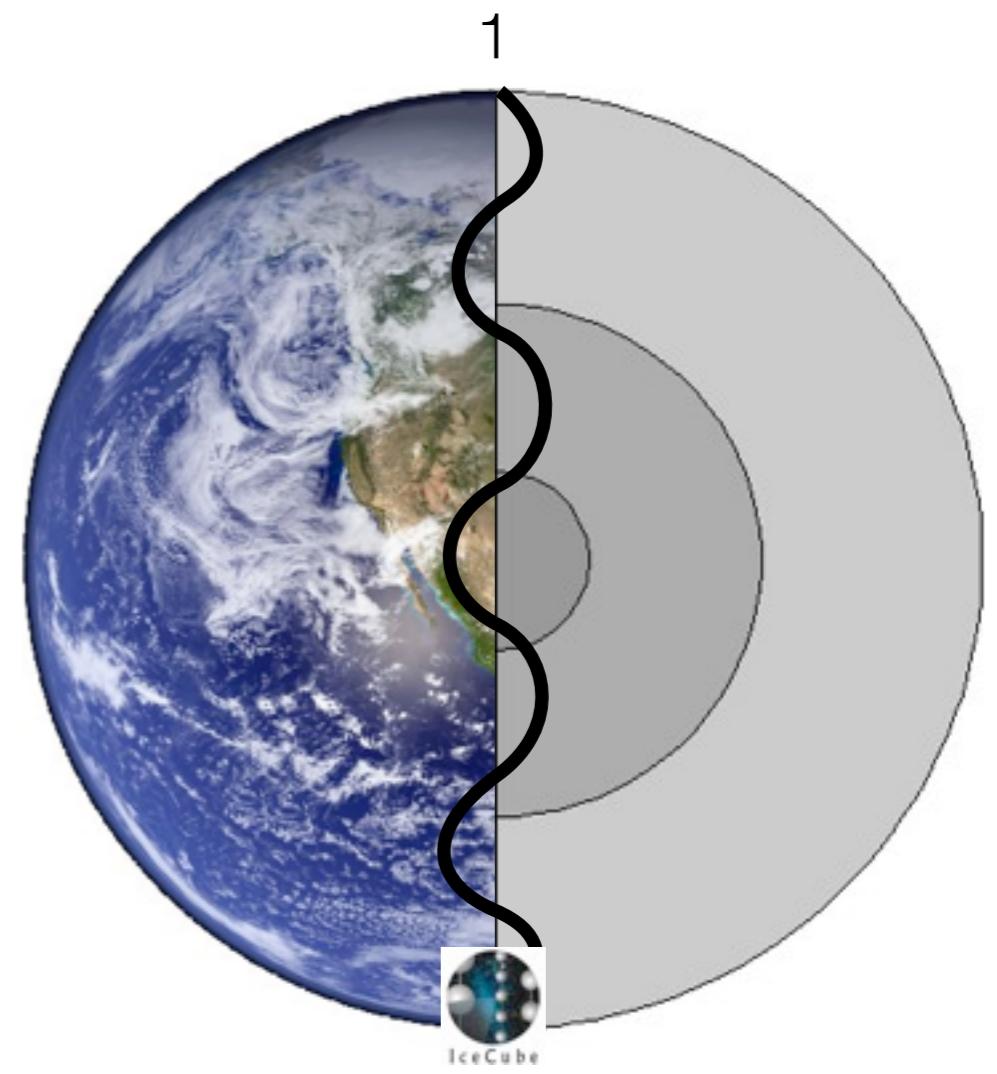

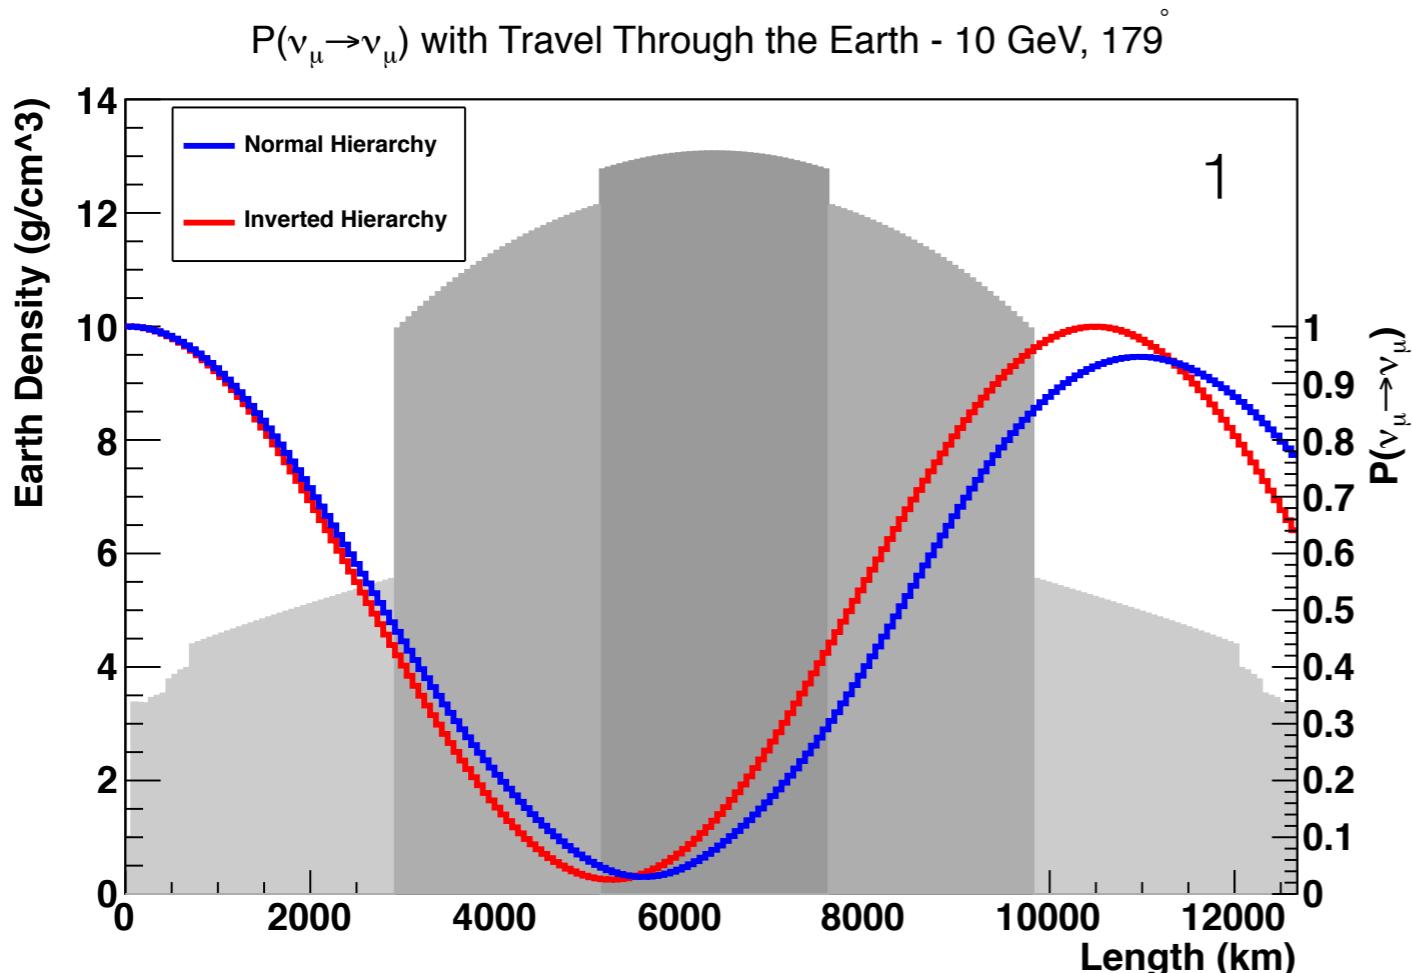

IceCube + DeepCore + PINGU

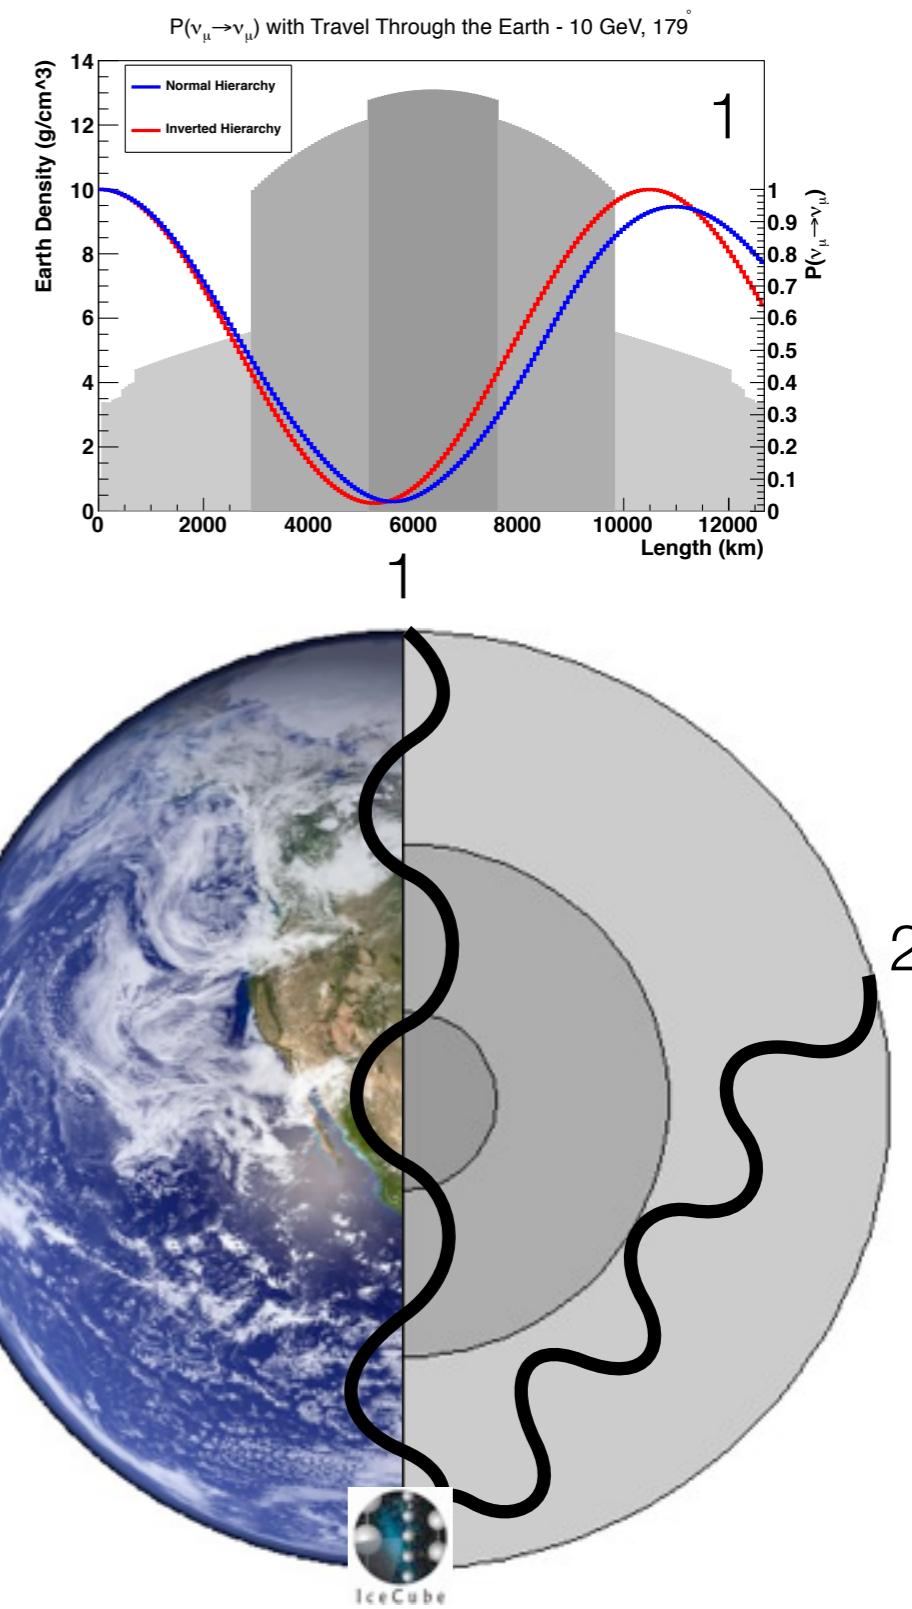

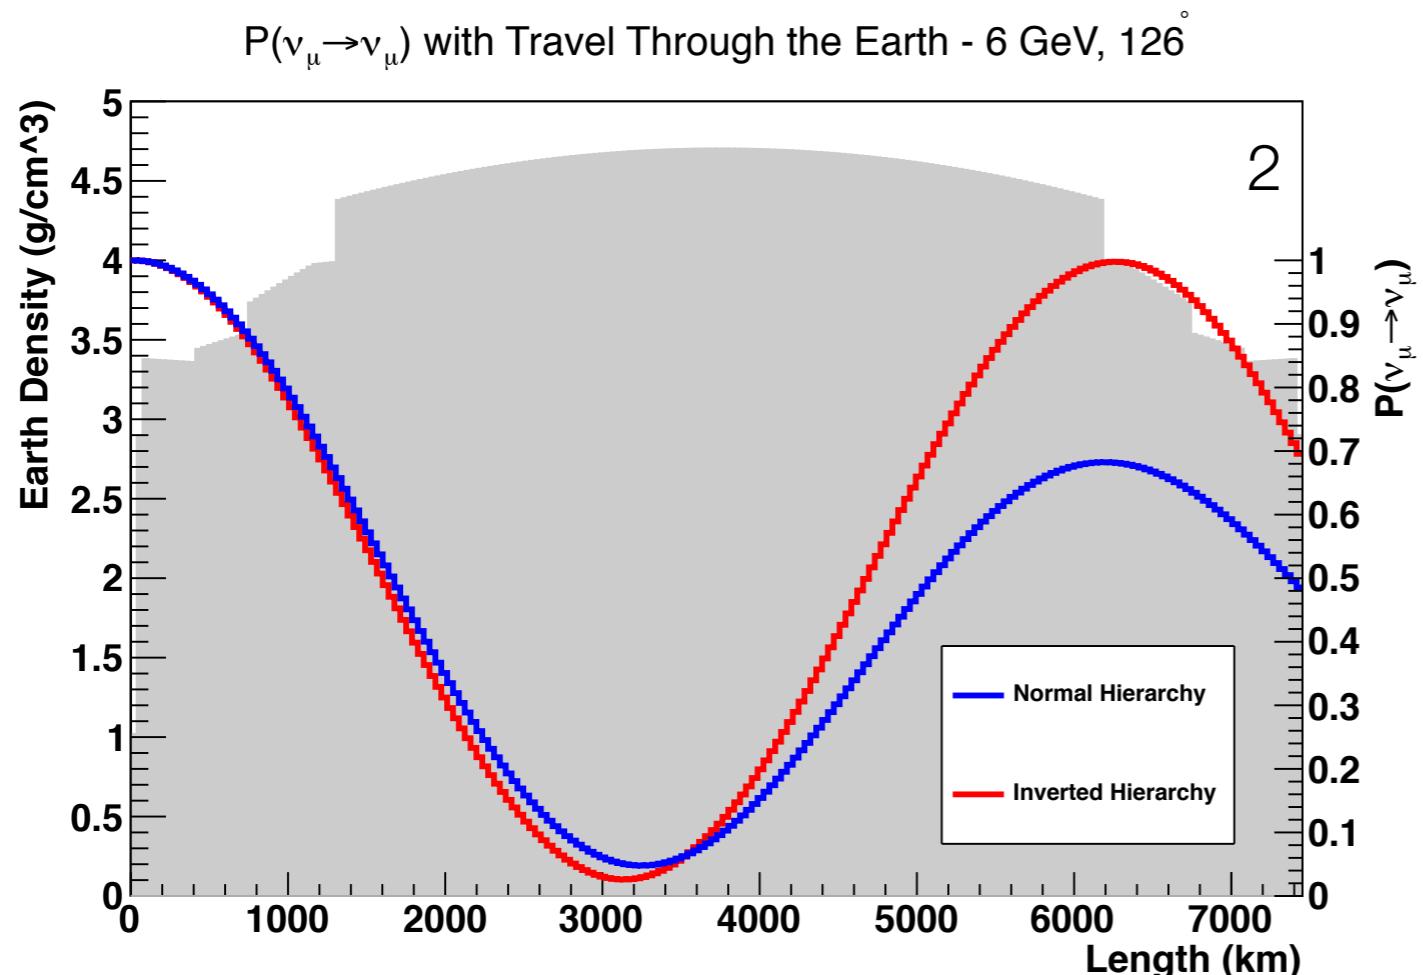

- 78 Strings
 - 125m string spacing
 - 17m DOM spacing
- Add 8 strings
 - 75m string spacing
 - 7m DOM spacing
- Add 40 strings
 - 22m string spacing
 - 3m DOM spacing

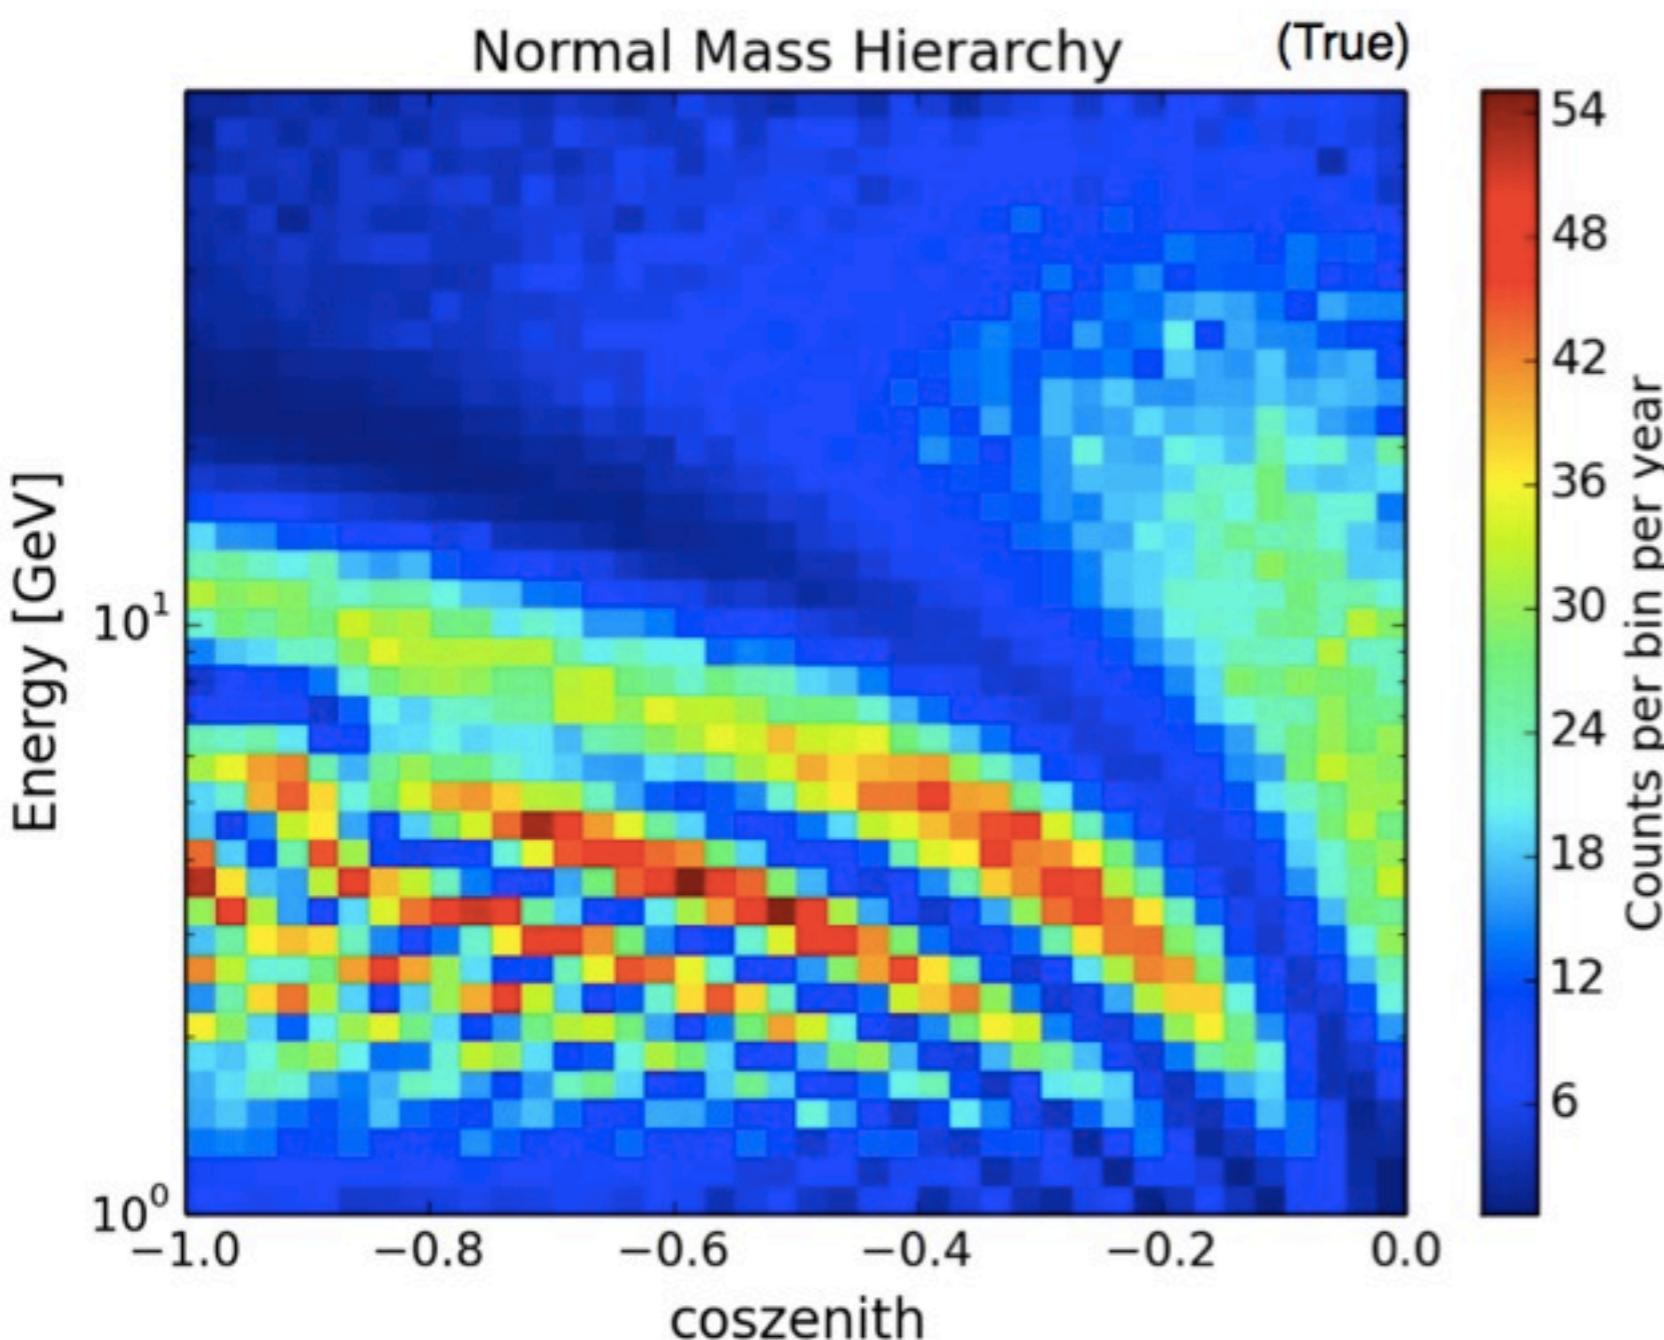

Mass Hierarchy Determination

Mass Hierarchy Determination

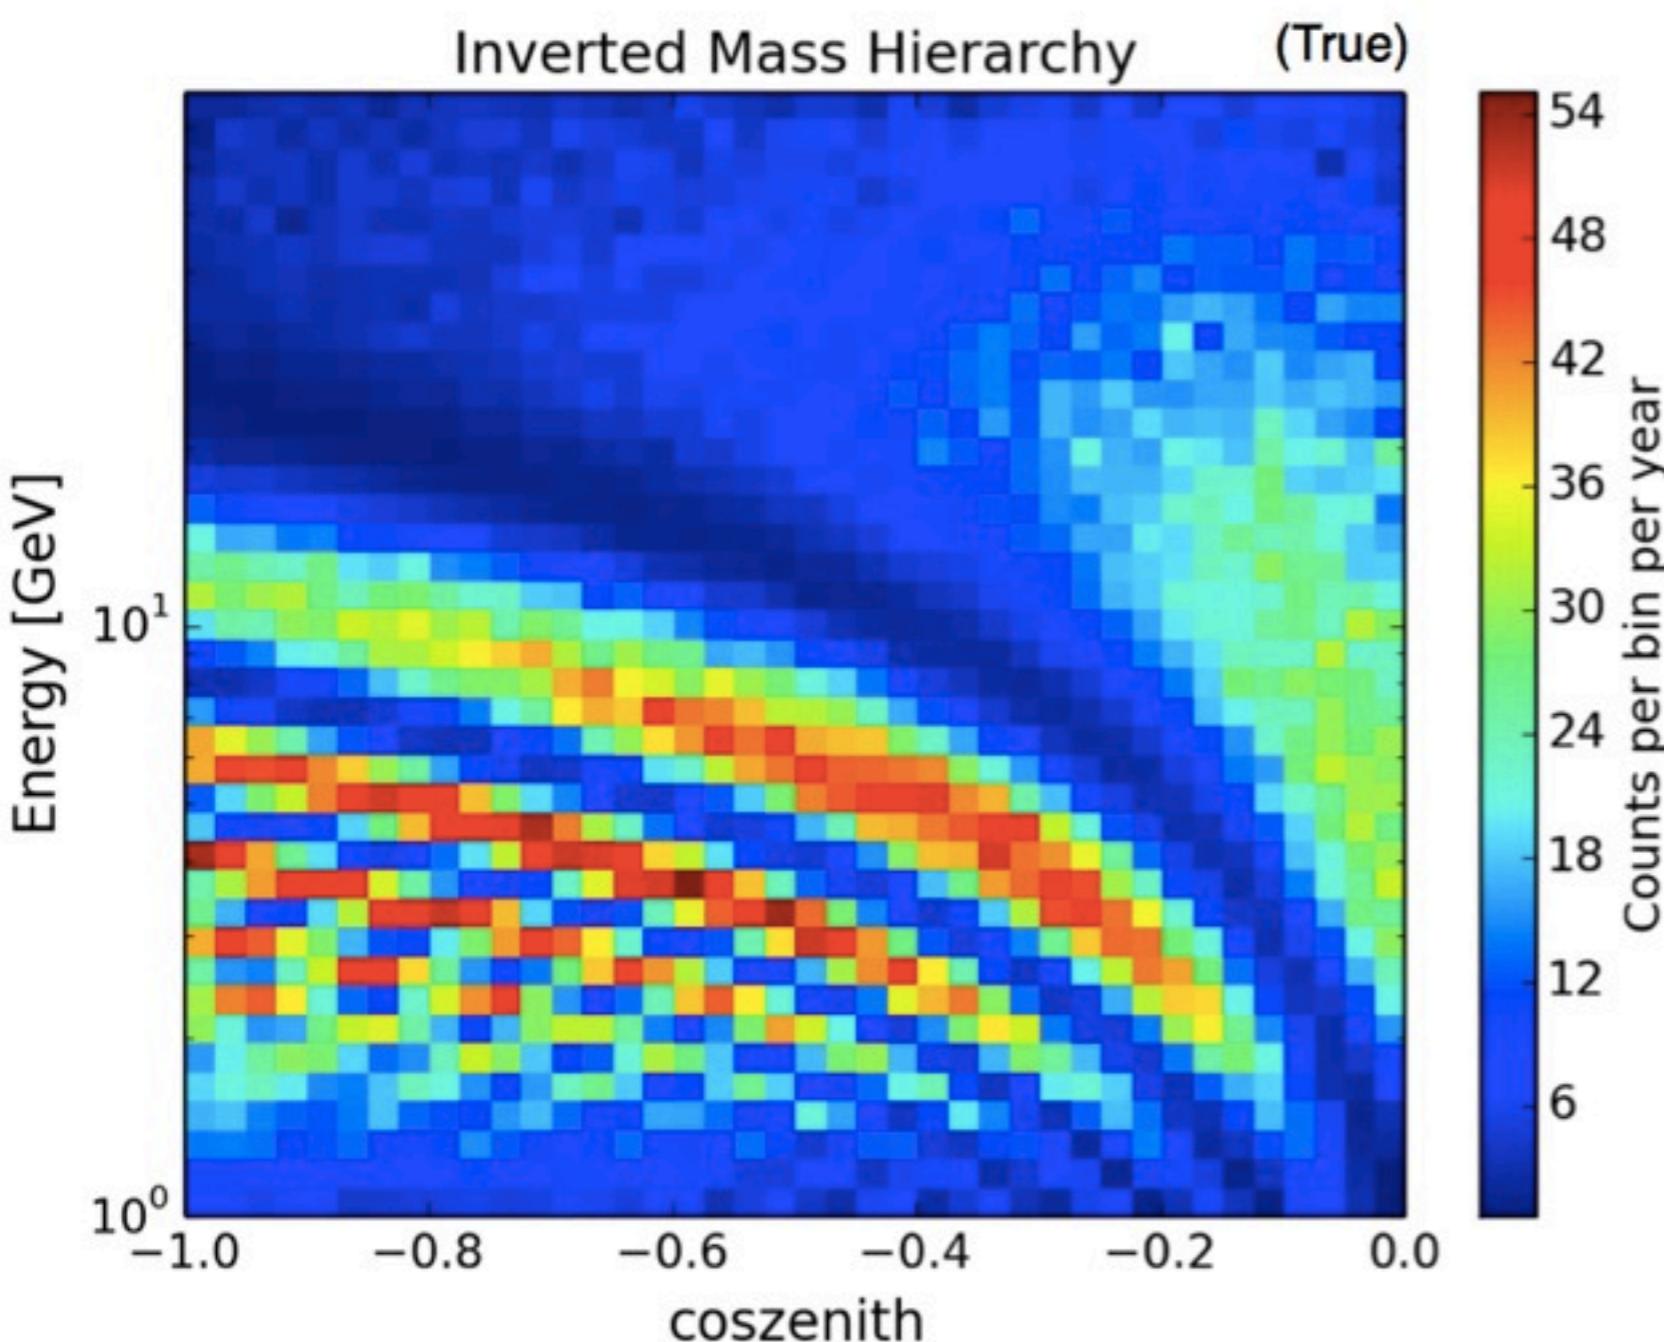

Neutrino Oscilograms

- Sum of ν_μ and $\bar{\nu}_\mu$
- Reconstruction and PID not included here

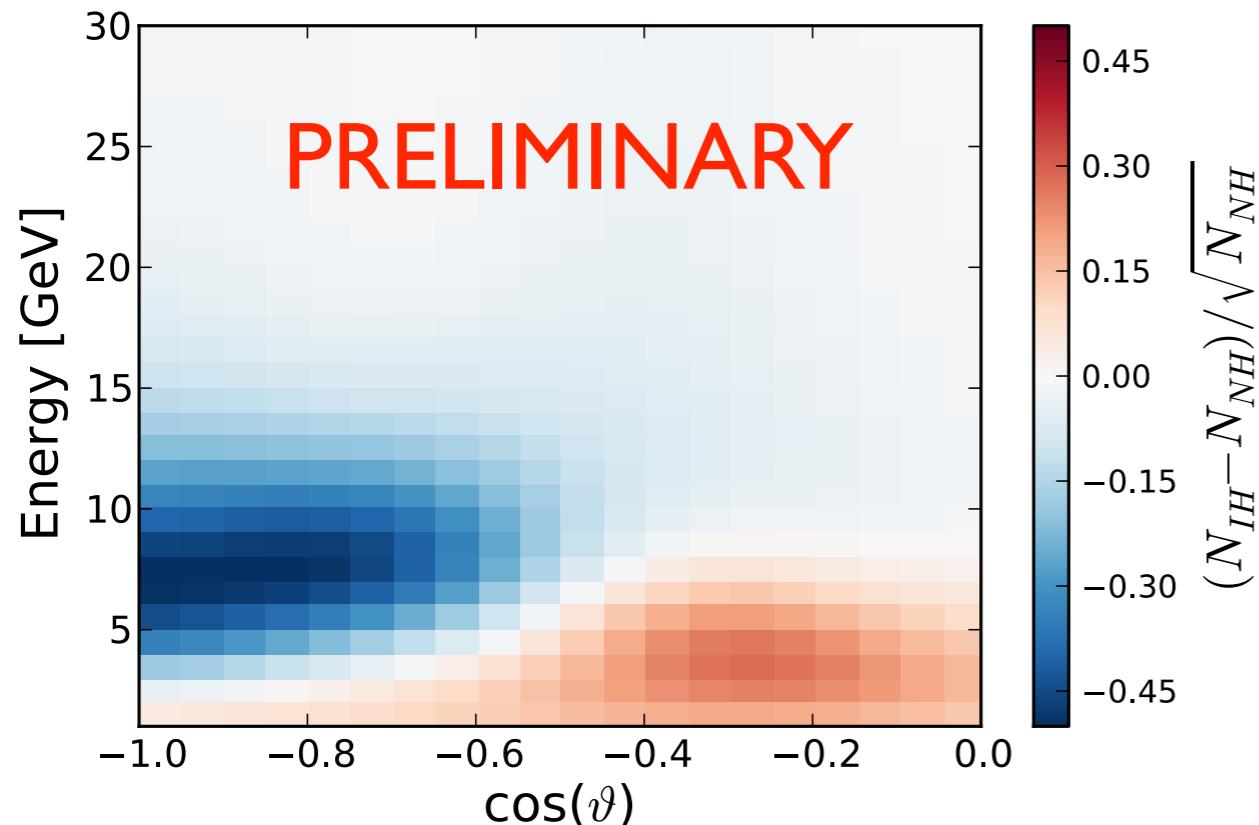

Neutrino Oscilograms

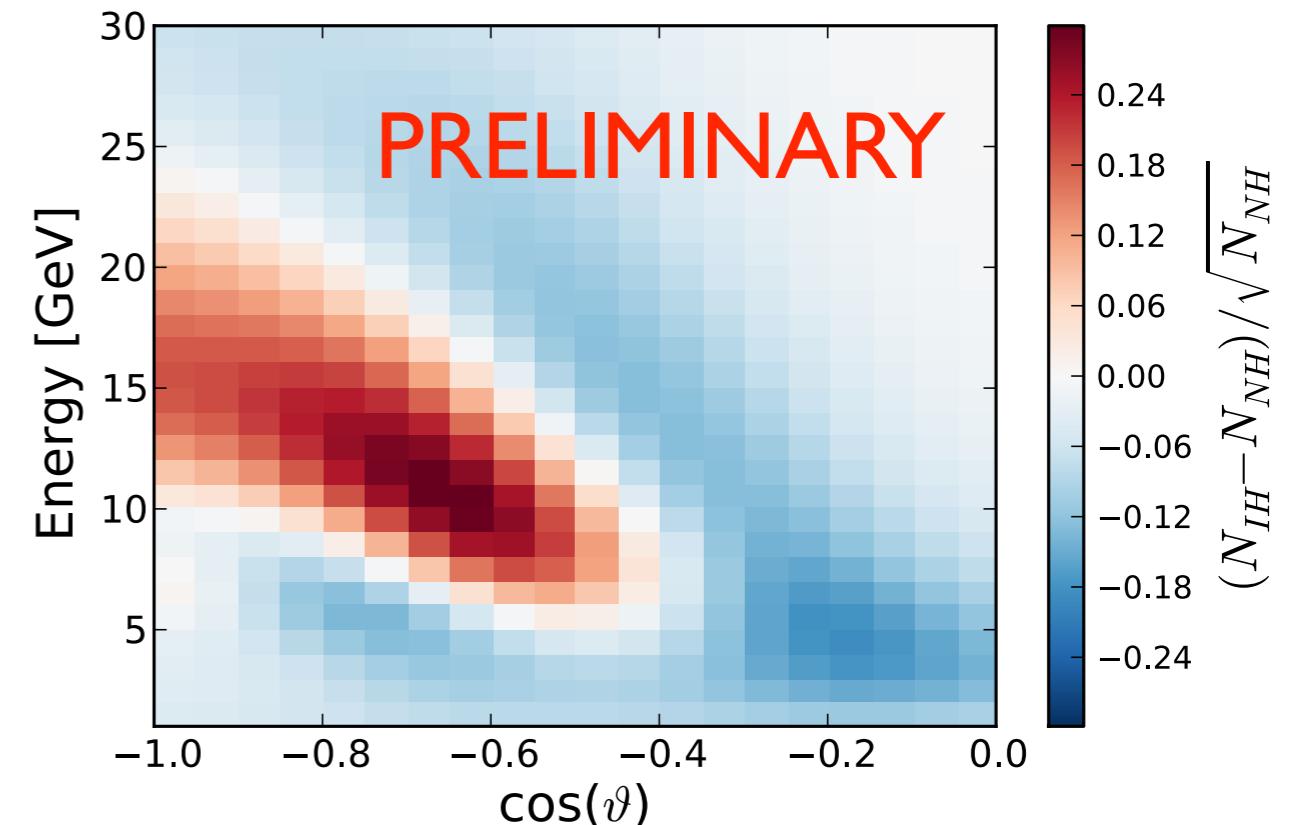

- Sum of ν_μ and $\bar{\nu}_\mu$
- Reconstruction and PID not included here

Mass Hierarchy Determination

Cascade-Like Events

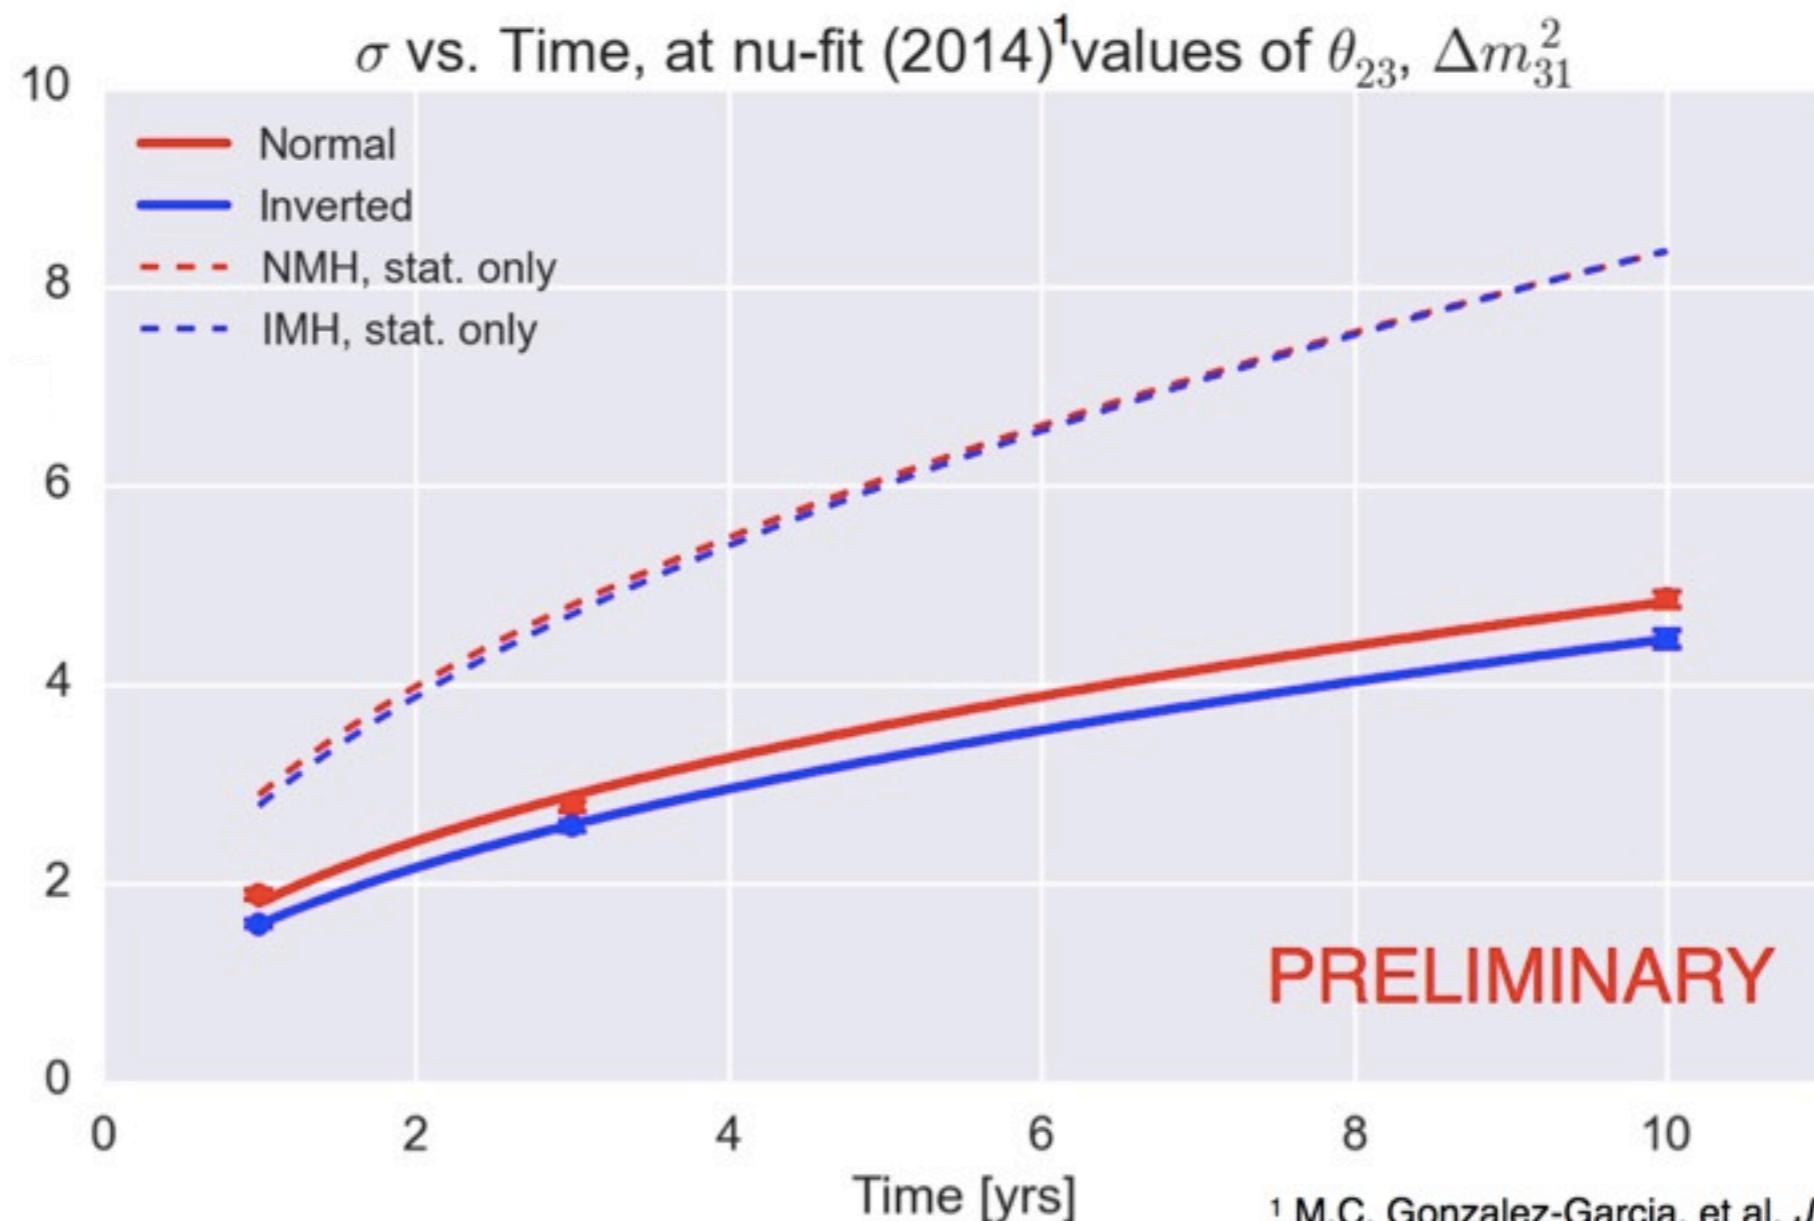

Track-Like Events

- Difference in counts between hierarchies illustrates distinguishability
- Background rejection cuts not included here

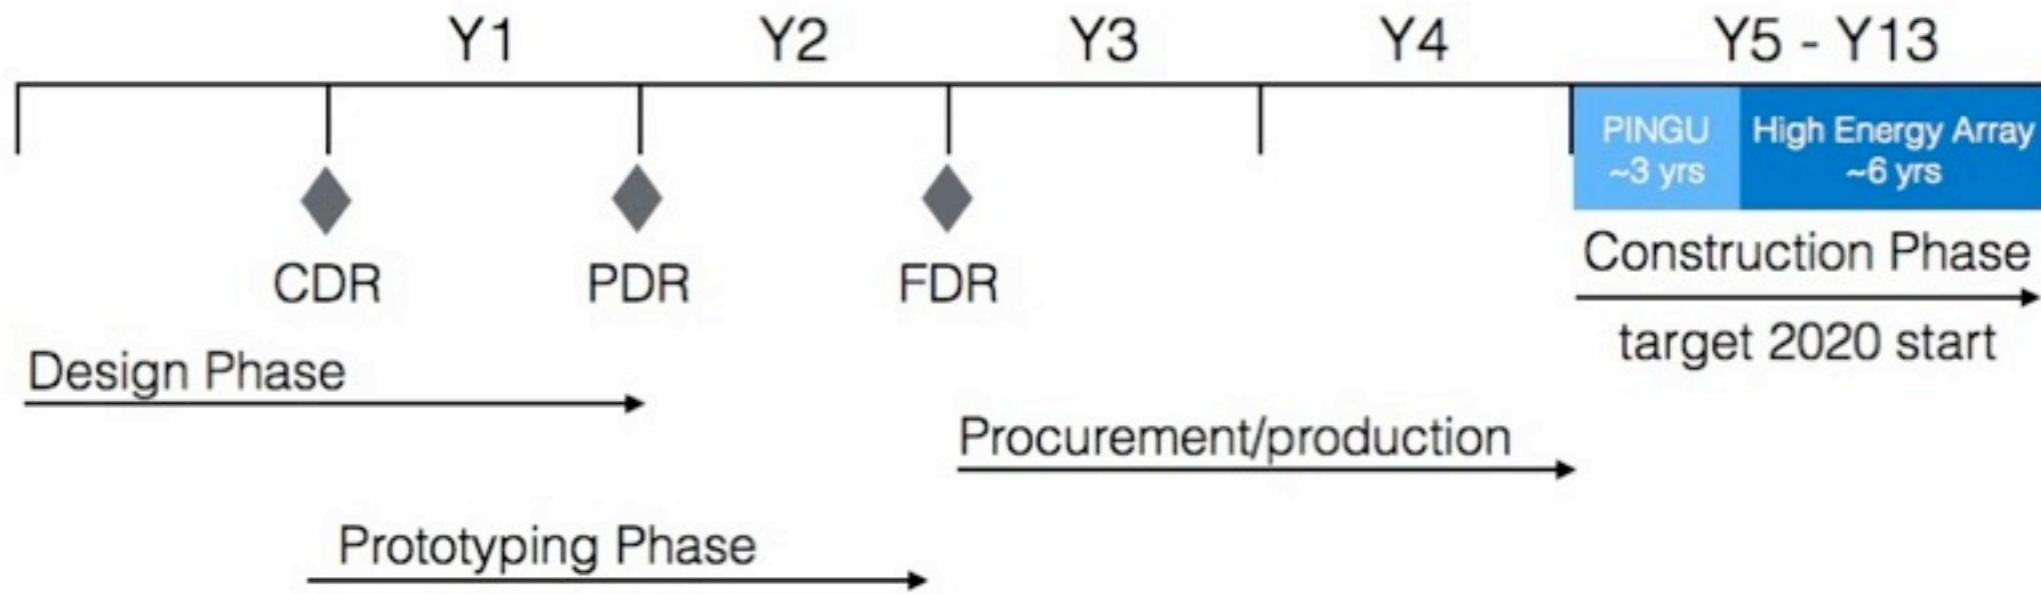

The Bottom Line

- Most important question is how long does it take to make a measurement?

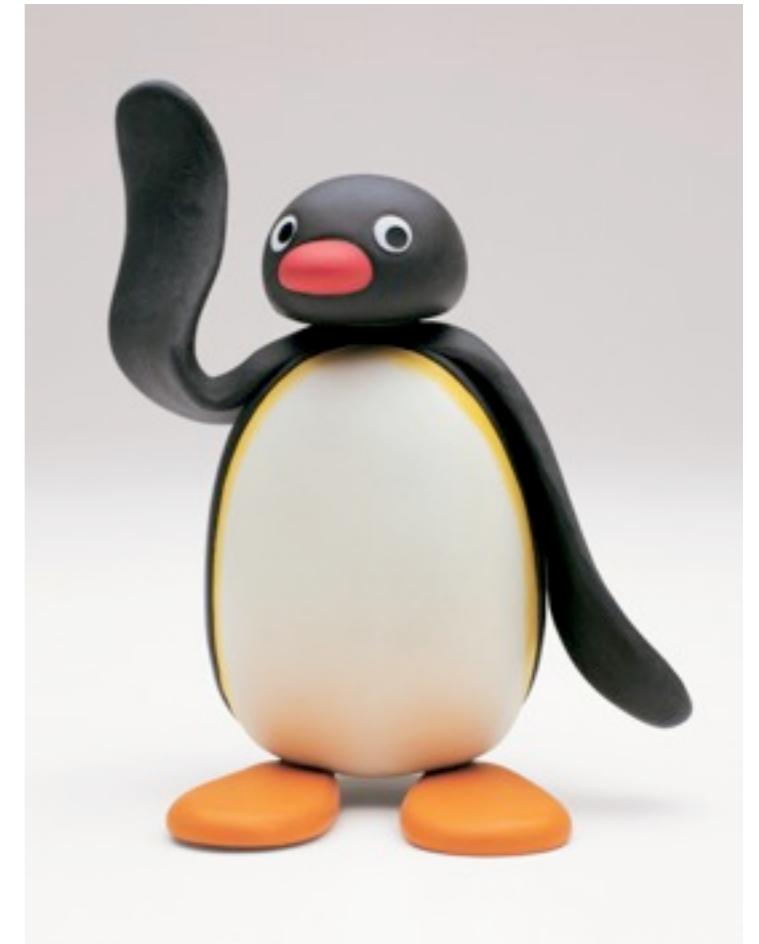

¹ M.C. Gonzalez-Garcia, et al. JHEP 11 052, 2014

Timeline

Conclusion

- IceCube and DeepCore have been very successful and have shown that particle physics is possible in ice
- PINGU will provide insight into the nature of the NMH as well as the oscillation parameters

The IceCube–PINGU Collaboration

Future of the NMH Measurement

- **MANY** caveats

- median outcome shown
- width indicates effect of main uncertainty (δ_{CP} , θ_{23})
- dates are also bound to change as time goes on

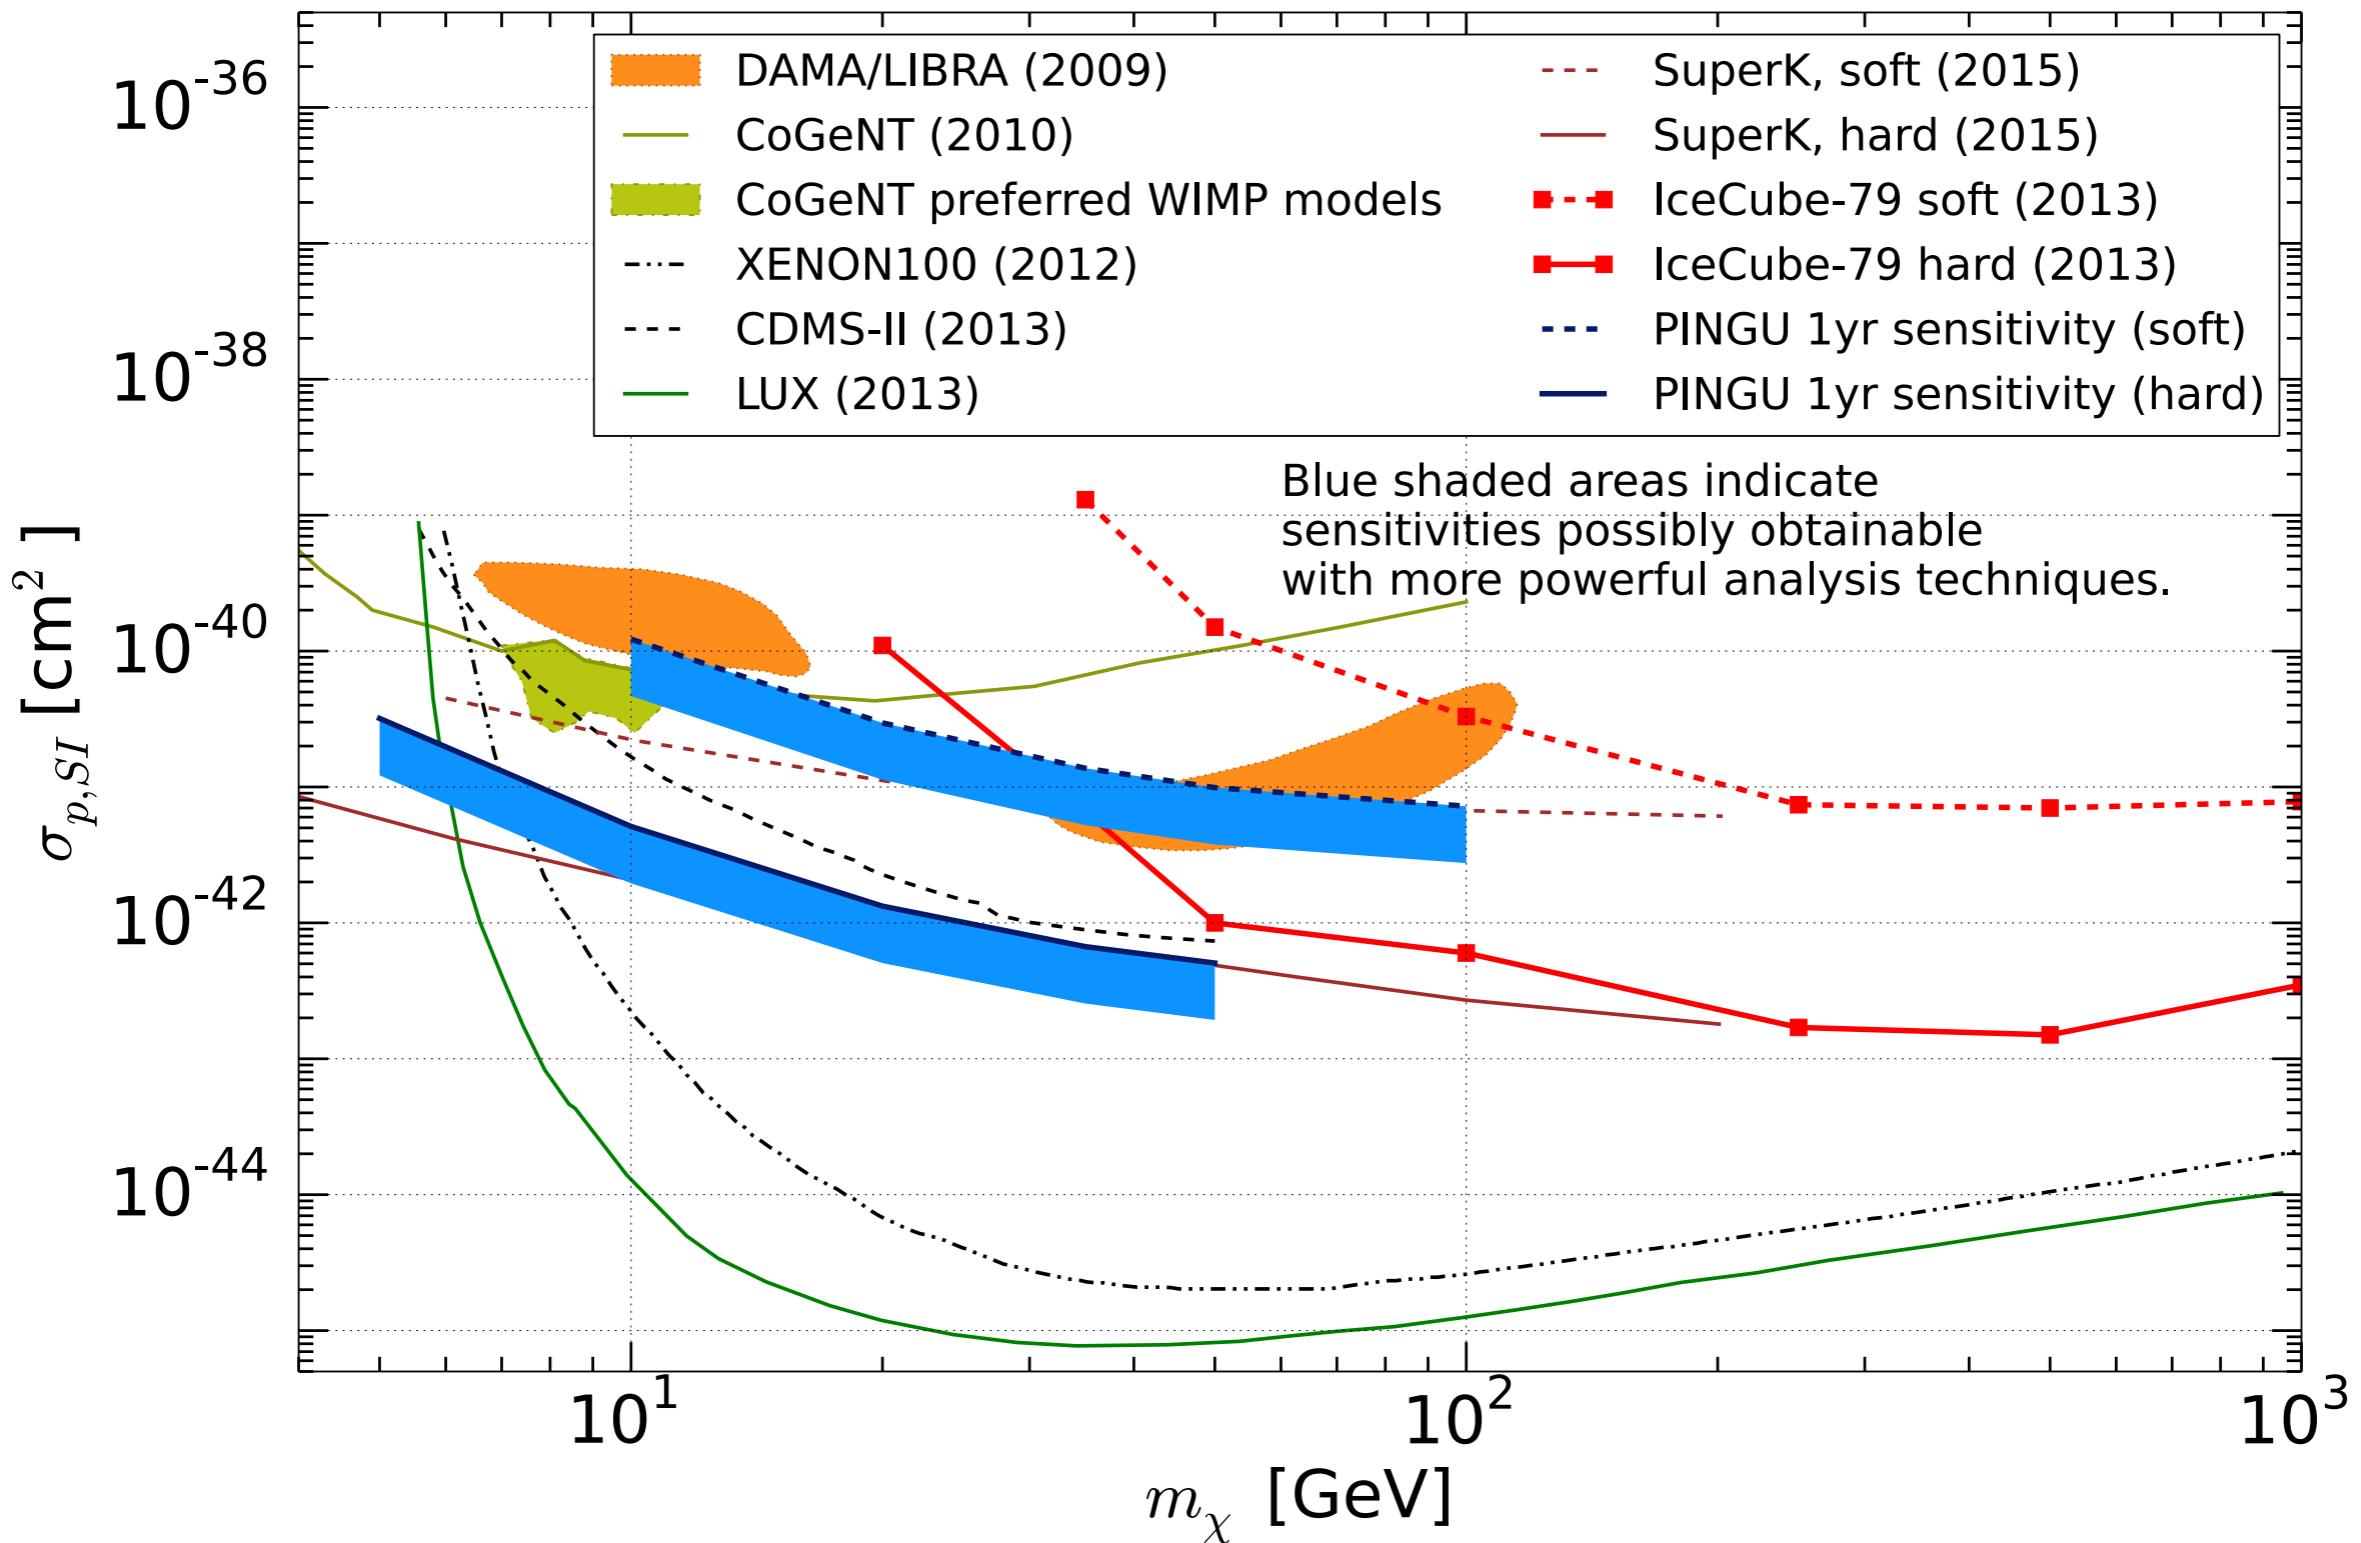

Dark Matter

Note: Not to scale

Dark Matter

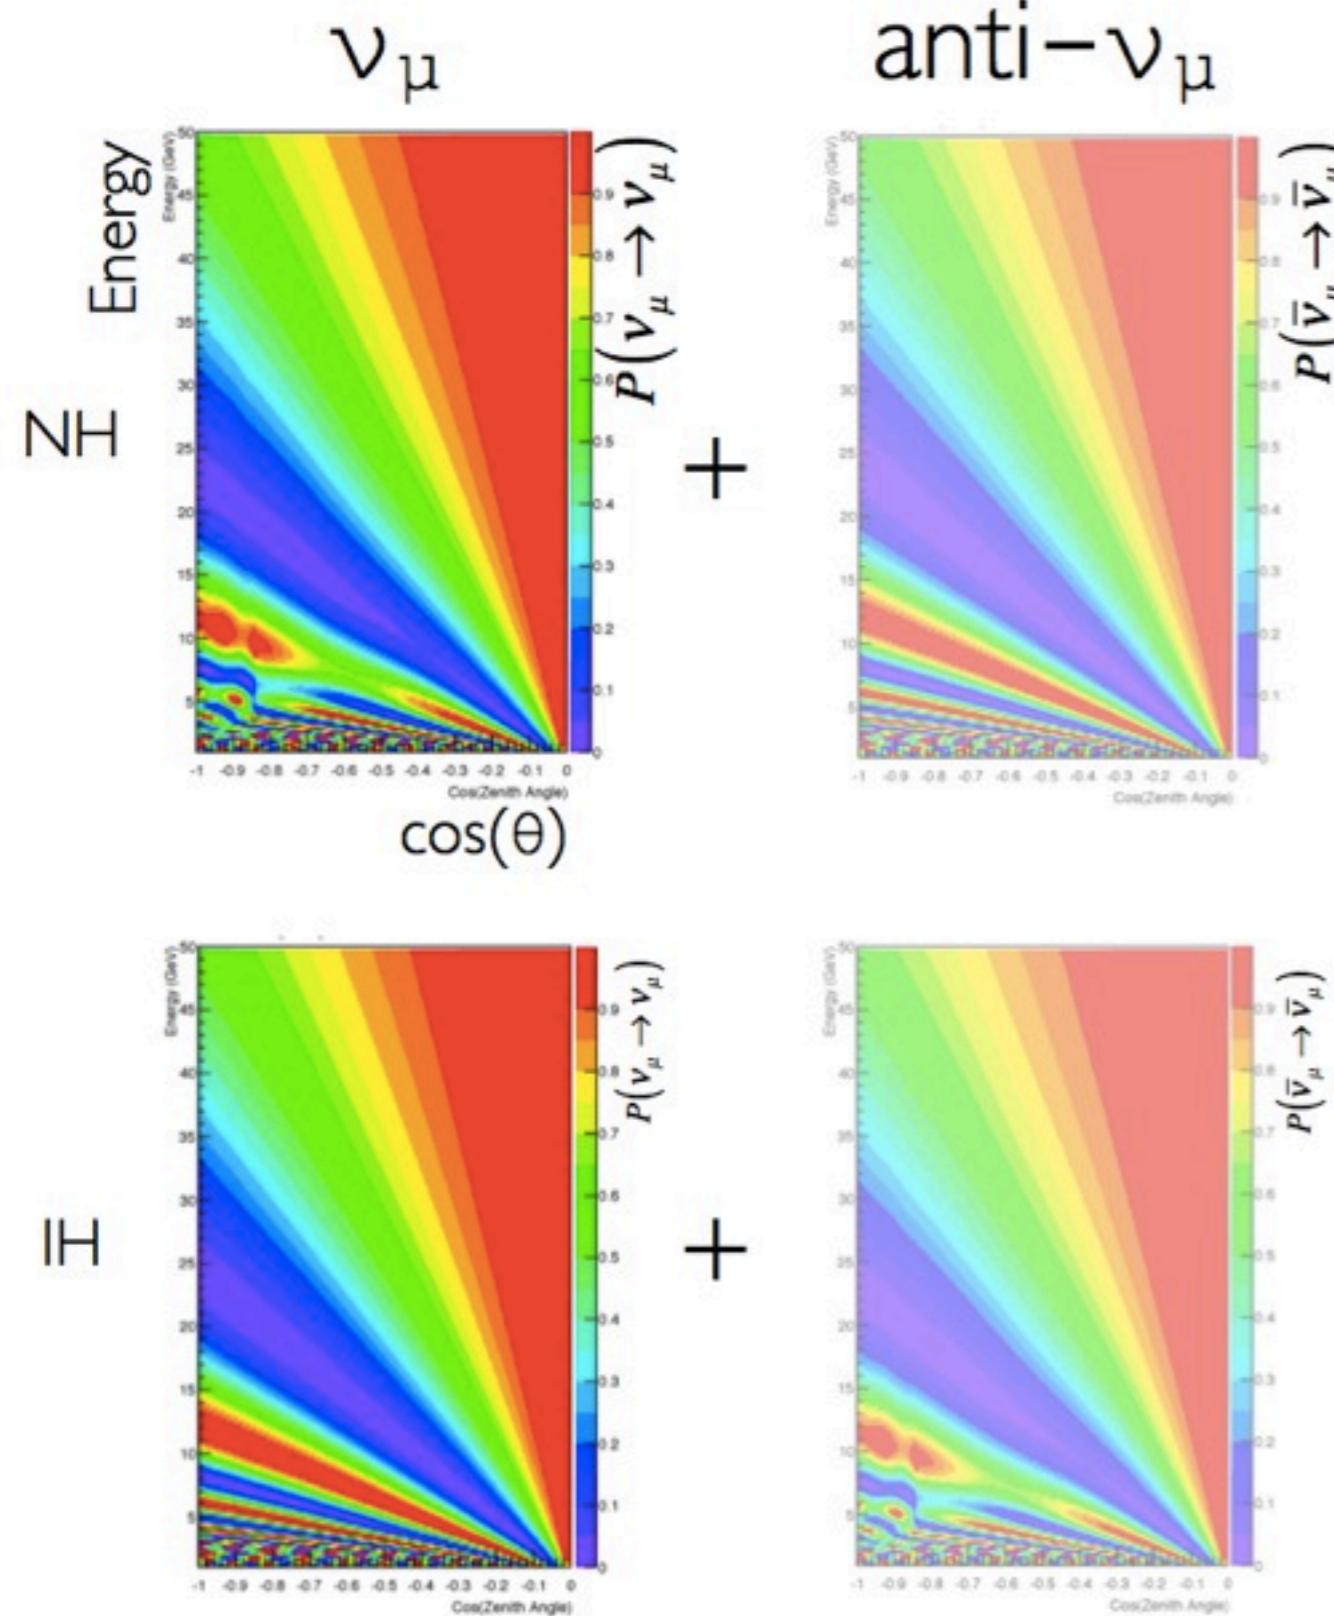

Systematic Effects

- Investigate the most significant systematics
- Right now θ_{23} has the largest effect

PRELIMINARY

Type	3yr σ (NMH)	3 yr σ (IMH)
stat only	4.84	4.82
osc only	2.96	2.53
flux only	4.55	4.56
detector only	4.06	3.99
All	2.90	2.51

Neutrino Oscillograms

- The cross-section and flux are different for ν_μ and $\bar{\nu}_\mu$
- The patterns are therefore different!

Oscillation Parameters
