***** Withdrawn *** AdS/QCD predictions for B decay
to K^* and two neutrinos**

Tuesday 12 June 2018 08:00 (15 minutes)

$B \rightarrow K^* \nu \bar{\nu}$ is an excellent venue to test various model predictions for $B \rightarrow K^*$ transition form factors. Here we compare predictions for the differential branching ratio, as well as the longitudinal polarization fraction obtained from AdS/QCD holographic light-front wavefunction and QCD sum rules.
