WITHDRAWN - Symmetry restoration in mixed-spin paired heavy nuclei

Wednesday 5 June 2019 11:45 (15 minutes)

The nature of the nuclear pairing condensates in heavy nuclei, specifically neutron-proton (spin-triplet), versus identical-particle (spin-singlet) pairing has been an active area of research for quite some time.

In this work, we probe three candidates that should display spin-triplet, spin-singlet, and mixed-spin pairing. Using theoretical approaches such as the gradient method and symmetry restoration techniques, we find the ground state of these nuclei in Hartree-Fock-Bogoliubov theory and compute ground state to ground state pair-transfer amplitudes to neighboring isotopes while simultaneously projecting to specific particle number and nuclear spin values.

We identify specific reactions for future experimental research that could shed light on spin-triplet and mixed-spin pairing.

Authors: Dr RRAPAJ, Ermal (University of California, Berkeley - University of Minnesota); Dr MACCHIAVELLI, Augusto O. (Nuclear Science Division, Lawrence Berkeley National Laboratory, Berkeley); Prof. GEZERLIS, Alexandros (Physics Department, University of Guelph)

Presenter: Dr RRAPAJ, Ermal (University of California, Berkeley - University of Minnesota)

Session Classification: W1-10 Nuclear Structure III (DNP) | Structure nucléaire III (DPN)

Track Classification: Nuclear Physics / Physique nucléaire (DNP-DPN)
