Highlights of recent results from the ATLAS experiment

Tuesday 9 June 2020 15:55 (25 minutes)

The ATLAS experiment is currently analysing the proton-proton collision dataset collected from 2015 - 2018. This talk will highlight some of the newest results from ATLAS, focusing on results that are only now possible with 139/fb of 13 TeV data. Both new observations of rare standard model processes and searches for beyond the standard model physics will be discussed.
