## Case Studies for Small-Group Student Collaboration in Large-Enrollment Introductory Physics Classes

*Wednesday 8 June 2022 14:30 (15 minutes)*

The goal of this project is to enhance students' collaboration with activities that reduce the reliance on multiple choice questions that are common in large-enrollment introductory physics classes, by providing students with new opportunities to collaborate on more open-ended scenarios, such as: mini-case studies. Course materials, in the form of mini-case studies were created. They were designed to target the most fundamental concepts of the first-year physics curriculum. These collaborative group activities are used to promote active learning and promote a sense of community in the partially flipped classroom. Originally the project was envisioned for the on-campus large class setting, however the COVID-19 pandemic and the challenges of engaging students during remote learning made the need for these types of activities even more pressing. Examples of the case studies activities will be demonstrated.

**Author:** Dr ANTIMIROVA, Tetyana

**Presenter:** Dr ANTIMIROVA, Tetyana

**Session Classification:** W2-5 DPE IV (DPE) | DEP IV (DEP)

**Track Classification:** Technical Sessions / Sessions techniques: Physics Education / Enseignement de la physique (DPE-DEP)
