## (I) ATLAS Run-3 Operations and Highlights

*Monday 19 June 2023 14:00 (30 minutes)*

The Large Hadron Collider restarted collisions at  $\sqrt{s} = 13.6$  TeV in 2022, beginning the start of a planned 4-year Run 3. The ATLAS experiment is now commissioning several upgraded detector systems to best take advantage of the new dataset, including the New Small Wheels and phase-1 liquid argon electronics upgrade to which Canadian physicists made substantial contributions. This talk will highlight the ongoing status of data-taking and commissioning of these systems, and highlight the first physics results from ATLAS utilizing the run 3 dataset.
