Quantum algorithm for the gradient of the logarithm-determinant

Tuesday 10 June 2025 14:15 (15 minutes)

An efficient implementation of the quantum gradient of the logarithm-determinant is demonstrated. The algorithm is shown to compare with existing methods on the quantum computer and scale more favourably, exposing that the key component for this algorithm is the wavefunction preparation step, as expected. Outlook for implementation and future extensions will be discussed, as will potential applications.

This research was undertaken, in part, thanks to funding from the Canada Research Chairs Program. This work has been supported in part by the Natural Sciences and Engineering Research Council of Canada (NSERC) under grant RGPIN-2023-05510.

Keyword-1

Quantum information

Keyword-2

Quantum algorithm

Keyword-3

Many-body physics

Author: BAKER, Thomas (Department of Physics & Astronomy and also of Chemistry, University of Victoria)

Co-author: Ms GREASLEY, Jaimie (Department of Chemistry, University of Victoria)

Presenter: BAKER, Thomas (Department of Physics & Astronomy and also of Chemistry, University of Victoria)

Session Classification: (DQI) T2-7 | (DIQ)

Track Classification: Technical Sessions / Sessions techniques: Division for Quantum Information / Division de l'information quantique (DQI / DIQ)
