

- Storage Ring
 - Discussion of calculations showing reach – desire for at least a rough estimation of yield rates and/or an example case
 - Ideally studied in NSERC project grant (not yet funded)
 - Uncertainty in cross sections also makes calculations difficult
 - Point made that the TISR is a 1st gen/proof of principle device – first to do this type of experiment. Paves the way for future 2nd gen devices, possibly at TRIUMF.
 - “Similar to early days of recoil separators”
- RTI/CFI funding
 - In addition to \$\$\$, timing is also a problem. CFI cycle can mean 5-yr gap.
 - Recommend to increase RTI funding?
- Technology development
 - OGS mentioned as specific example, mention of existing use outside NP already
