

The Hyper-K near detector programme

Wednesday 26 July 2017 14:00 (15 minutes)

The proposed Hyper-Kamiokande experiment (Hyper-K) is a next generation large water Cherenkov (WD) detector with a broad physics program consisting of neutrino beam measurements in search of leptonic CP violation, astrophysical measurements and a search for proton decay. Hyper-K will act as the far detector to measure the oscillated neutrino flux from the long-baseline beam of 0.6 GeV neutrinos/anti-neutrinos produced by a 1.3 MW proton beam at J-PARC in Japan. To minimise systematic uncertainties, particularly due to flux and cross-section uncertainties, detailed measurements of the unoscillated flux are required with a suite of near detectors. This talk will review the challenges, and present the planned components of the near detector measurement suite, including a new intermediate Water Cherenkov Detector.

Author: Dr WILSON, Jeanne (QMUL)

Co-author: HYPERK COLLABORATION

Presenter: Dr WILSON, Jeanne (QMUL)

Session Classification: Neutrino Parallel

Track Classification: Neutrinos
