Revisiting the slepton coannihilation model with light higgsino

Wednesday, July 19, 2023 6:20 PM (20 minutes)

We revisit the model where bino coannihilates with slepton and higgsino is also at electroweak scale. We update the LHC constraints and the dark matter direct detection constraints. Also, we consider the new physics contributions to muon $g-2$ and we find that there remains unexplored regions.
