

Supergravity backgrounds from λ -deformations

Friday 19 July 2024 10:20 (40 minutes)

In this talk, I will discuss the construction of two supersymmetric solutions of type-II supergravity based on the λ -deformed σ -models for $SL(2,R)$ and $SU(2)$. In the absence of deformation, they describe near-horizon limits of NS1 and NS5 brane intersections and both are 1/2-supersymmetric. When the deformation is turned on, supersymmetry breaks by half and both backgrounds preserve 8 supercharges.
