

Aspects of gauge-strings duality

Monday 3 June 2019 16:30 (1 hour)

We discuss some recent developments in the duality between gauge fields and strings. In particular, focusing on conformal field theories in diverse dimensions and with different amounts of supersymmetry, we comment on their string duals, the calculation of various physical observables and the possibility of finding classical integrability on the dual string worldsheet.

Presenter: NUÑEZ, Carlos (Swansea University)
