## The effect of scalar meson interactions on symmetry energy in RMFT.

*Tuesday 23 October 2018 18:00 (30 minutes)*

An extension of the standard RMF theory by including interaction between sigma and delta mesons is proposed. The first-order and second-order interaction between those mesons is calculated separately. It is shown that in both cases that the symmetry energy  $E_{\text{sym}}$  can be diminished to some extent in the specific range of baryon density. However, for the second-order interaction  $E_{\text{sym}}$  can take even negative values for low enough coupling constant. Current work includes implementing those results into TOV equation. The neutron stars with a mass in the range  $1.8- 2.3 M_{\odot}$  were obtained.

**Presenter:** Mrs ZABARI, Noemi (Institute of Nuclear Physics, Polish Academy of Sciences )
