

Dark Energy in 2020

Wednesday 25 March 2020 08:30 (30 minutes)

Twenty years after the discovery of cosmic acceleration, or Dark Energy, there is now robust evidence from a number of independent precision measurements. I will review recent progress on determining the properties of Dark Energy from different cosmological probes, highlight growing tensions in the Λ CDM paradigm, and conclude with an outlook on upcoming large experiments of the early 2020s.

Author: KRAUSE, Elisabeth (The University of Arizona)

Presenter: KRAUSE, Elisabeth (The University of Arizona)

Session Classification: Session 1

Track Classification: Dark energy
