

Infozentrale auf dem Vollgut

Wednesday 25 March 2020 12:00 (30 minutes)

The “Infozentrale auf dem Vollgut” was designed and realised by a group of 36 students as part of the BUILDinG CYCLE design studio from the Natural Building Lab at the Technische Universität Berlin. In co-operation with the research project RE4, a building embodying circular construction principles was realised from waste materials as a DesignBuild project, offering an answer to questions relating to resource-positive construction in an urban context. The space provided is used by all of the diverse actors active on the VOLLGUT site in Berlin Neukölln, showcasing up to date information about the currently active processes and designs being developed for the site. The project should provide a place for actors from different groups to encounter with each other and the neighborhood.

Presenters: Prof. ROSWAG-KLINGE, Eike (TU Berlin); CRABBE, Matthew (TU Berlin)

Session Classification: Poster Session und interaktive Ausstellung
