Purpose

Optimization of Q_{ratio} means FOM largest.
→ Optimize the Q_{tail}
→ Theoretical evaluation is studied in this work and compare to previous study.

Calculation of signal response of a scintillation detector with 3 decay components

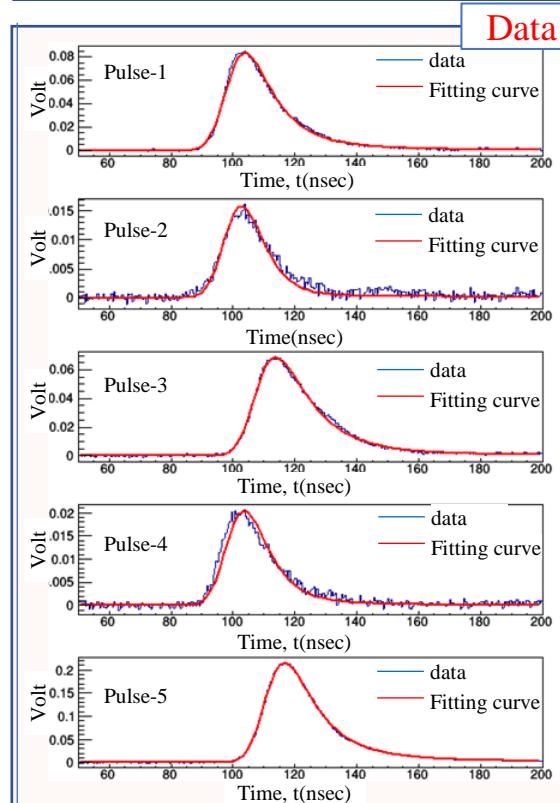

λ : Decay constant

$$G(t) = \frac{1}{\sigma\sqrt{2\pi}} e^{-\frac{(t-\mu)^2}{2\sigma^2}}$$

$$\theta = \frac{1}{RC}$$

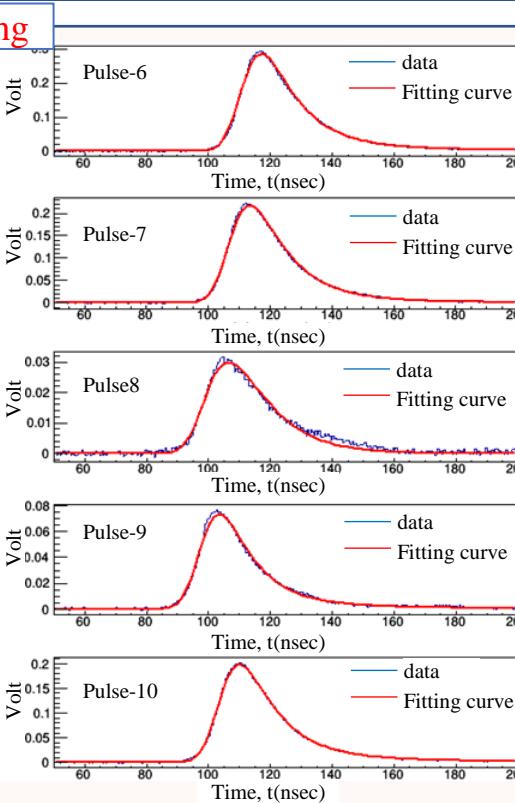

$$\text{erf}(x) = \frac{2}{\sqrt{\pi}} \int_0^x e^{-u^2} du$$

Fitting formula:

$$V(t) = \sum_{i=1}^3 A_i \left\{ \exp\left(\frac{\lambda_i^2\sigma^2-2(t-\mu)\lambda_i}{2}\right) \left[1 - \text{erf}\left(\frac{-t+\mu+\lambda_i\sigma^2}{\sigma\sqrt{2}}\right) \right] - \exp\left(\frac{\theta^2\sigma^2-2(t-\mu)\theta}{2}\right) \left[1 - \text{erf}\left(\frac{-t+\mu+\theta\sigma^2}{\sigma\sqrt{2}}\right) \right] \right\}$$

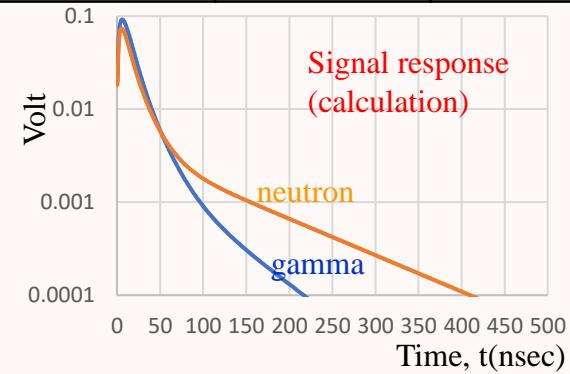

Fitting parameters: $A_1, A_2, A_3, \theta, \lambda_1, \lambda_2, \lambda_3, \sigma, \mu$.

From measurement data
for Co-60 and Cf-252

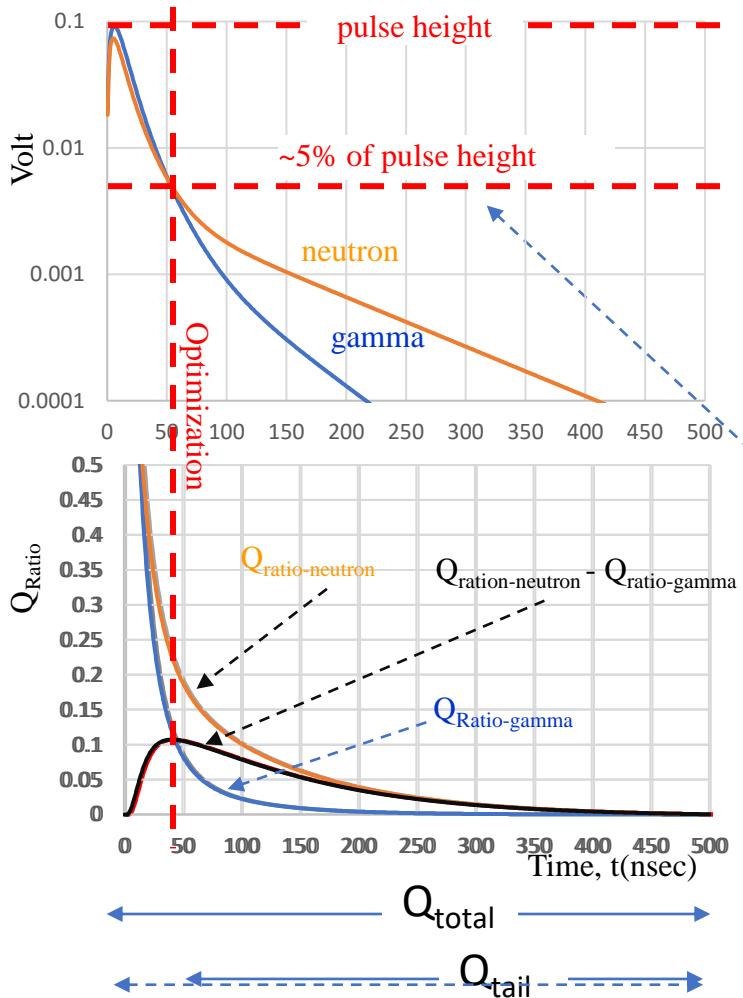

Fitting

Fitting parameters	Gamma	Neutron
θ	0.124 ± 0.034	0.142 ± 0.048
λ_1	0.266 ± 0.075	0.328 ± 0.073
λ_2	0.055 ± 0.019	0.059 ± 0.019
λ_3	0.016 ± 0.010	0.009 ± 0.005
