Radiological Image quality metrics in clinical routine

Friday 9 September 2022 11:30 (15 minutes)

Radiography is an imaging technique using X-rays and which is the most common and quick technique in diagnostic imaging. It has been more than a century since W.C. Röntgen discovered X - ray but nowadays, it still has some useful and helpful values. In Vietnam, few radiographers pay attention about the image quality in radiography. Therefore, it is essential to know the metrics which affect the image quality.

Presenter: ., Đặng Thế Phong
