

Cinzia DaVià is a Professor of Physics in the Department of Physics and Astronomy at the University of Manchester, UK, and a Research Professor at Stony Brook University, USA. She received her PhD in Physics from the University of Glasgow, Scotland, conducting research at The European Centre for Particle Physics CERN on radiation detectors and their applications in medicine, for which she was awarded a CERN fellowship. She formed and led an international collaboration to develop the innovative 3D detector design, known for its exceptional radiation tolerance and speed, which were installed in the LHC-ATLAS experiment in 2012. She is the Chief Editor of *Frontiers in Physics: Radiation Detectors and Imaging*, a member of the Technology and Innovation Group of the European Physical Society and a member of the International Union of Pure and Applied Physics' Physics and Industry Working Group liaison officer to the IEEE. She co-authored more than 900 publications (including the ATLAS experiment ones), and a book on 3D radiation detectors.

Within IEEE, she leads the Nuclear and Plasma Sciences Society (NPSS) Climate Change Initiative since 2024, which organises events in the nuclear and plasma sectors for energy and society. She is also a member of the NPSS Educational Committee, advancing radiation instrumentation education in underrepresented countries. She is a member of the Social Implications of Technology (SSIT) Society where she leads the Students Activity Committee (2025-26) and is the co-founder and chair of the IEEE Energy and Sustainable Technology (ESTEK) group, which promotes energy and sustainability-focused technical and educational initiatives across IEEE Societies. She is an active member of IEEE Women in Engineering (WIE), and the liaison to the History Committee (2025-26), she was the chair of the ad hoc committee for the WIE 25th-anniversary celebrations, for which she was the awardee of the 2022 IEEE WIE Committee Outstanding Volunteer of the Year.
