EPICS Continuous Integration: Status and Support

Thursday 6 June 2019 16:20 (15 minutes)

EPICS uses a set of Continuous Integration (CI) tools to support the development of the Core package and support modules. An overview of the used tools and their scopes will be presented.

A recent development tries to provide a common set of scripts for these CI services. This allows support modules to be automatically built and tested against multiple EPICS versions, on different OSs, using different compiler versions, with minimal configuration effort.
