

RF Control interlocks correlation in EPICS/CSS based on White Rabbit Technology

Post-mortem analysis and first results in LIPAc accelerator The innovative IFMIF

LIPAc (Linear IFMIF Particle Accelerator) International Fusion Materials Irradiation Facility

Rokkasho, Aomori, Japan

Japan-Europe scientific collaboration

- 8x RF Chains for the RFQ Cavity, controlled by 4 LLRF (1 Master + 7 Slaves)
- 2x RF Chains for 2 independent Buncher Cavities, controlled by 1 LLRF

1. General overview of LIPAc
- 2. General overview of White Rabbit**
3. LIPAc and Interlocks
4. Historical Interlocks
5. Future Developments

White Rabbit?...*An extension of Ethernet.*

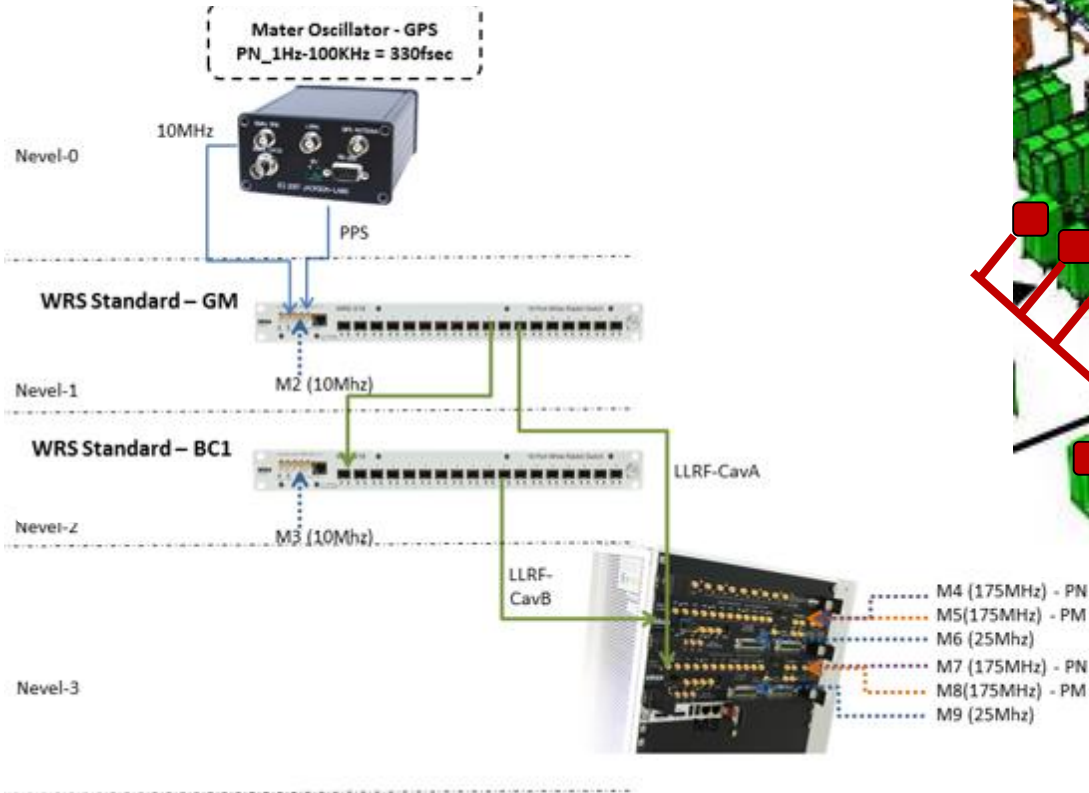

- It was born at CERN for time and frequency dissemination up to 1000 nodes
- Ultra-synchronization: **Sync-E & PTP (IEEE-1588v2)**
 - Sub-nanosecond time accuracy
 - Clock RMS jitter ~2 ps (1Hz – 1MHz)
- Accurate timestamps
- Thousand of nodes: compatible with standard Eth. nodes
- Distance range over 80 km
- Robustness & redundancy
- Self-calibration over long distances

White Rabbit in LIPAc

- **First** Low Level RF based on White Rabbit
- **Frequency distribution** in different locations with synchronized phase, data logging and fast interlock system
- **Clock distribution: Sub-nanosecond** timestamping through the beam line → Same notion of time in all the modules → Monitoring and post-mortem analysis are **correlated** between LLRFs

RF and clock distribution system:

1. General overview of LIPAc
2. General overview of White Rabbit
- 3. LIPAc and Interlocks**
4. Historical Interlocks
5. Future Developments

RF System for RFQ

- LLRF 4 { Cav. 4B (Slv)
Cav. 4A (Slv)
- LLRF 3 { Cav. 3B (Slv)
Cav. 3A (Slv)
- LLRF 2 { Cav. 2B (Slv)
Cav. 2A (Slv)
- LLRF 1 { Cav. 1B (Slv)
Cav. 1A (Mst)

RF Area

Why WR Based Interlock Correlation?

- In LIPAc there are many dependent RF modules and an interlock situation in one of them usually propagates the interlock to other modules (i.e. Reflected power peaks)
- When a module triggers an interlock is difficult to detect which one has been the first → Difficult to detect where is the problem!!
- Conditioning time reduction!!

1. General overview of LIPAc
2. General overview of White Rabbit
3. LIPAc and Interlocks
- 4. Historical Interlocks**
5. Future Developments

- WR and EPICS provide a common sense on time in all the LLRF included in the system → All PVs are correlated!!
- EPICS PV and CSS-BOY GUI used for displaying the historical of interlocks
- Waveforms are used for saving interlocks and timestamps →
 PV data available for analysis and archiving purposes
- Interlock historic data is also used for post-mortem analysis
- Provide an easy and visual way to show the sorted interlock occurrence in one or between multiples RF Modules/Chains

Individual Historic

A vertical control panel with 15 status indicators (circles) and two buttons at the bottom. The indicators are: FwCav Thr. (red), RvCav Thr. (green), FwLoad Thr. (green), RvCirc Thr. (green), Arcs (green), Vacuum (green), Multipact. (green), MPS (green), ClkOutOfSync (green), Manual (green), Arc Counter (green), Spare2 In (green), and RvCav Average (green). The buttons are 'Show Historic' and 'Reset Historic'.

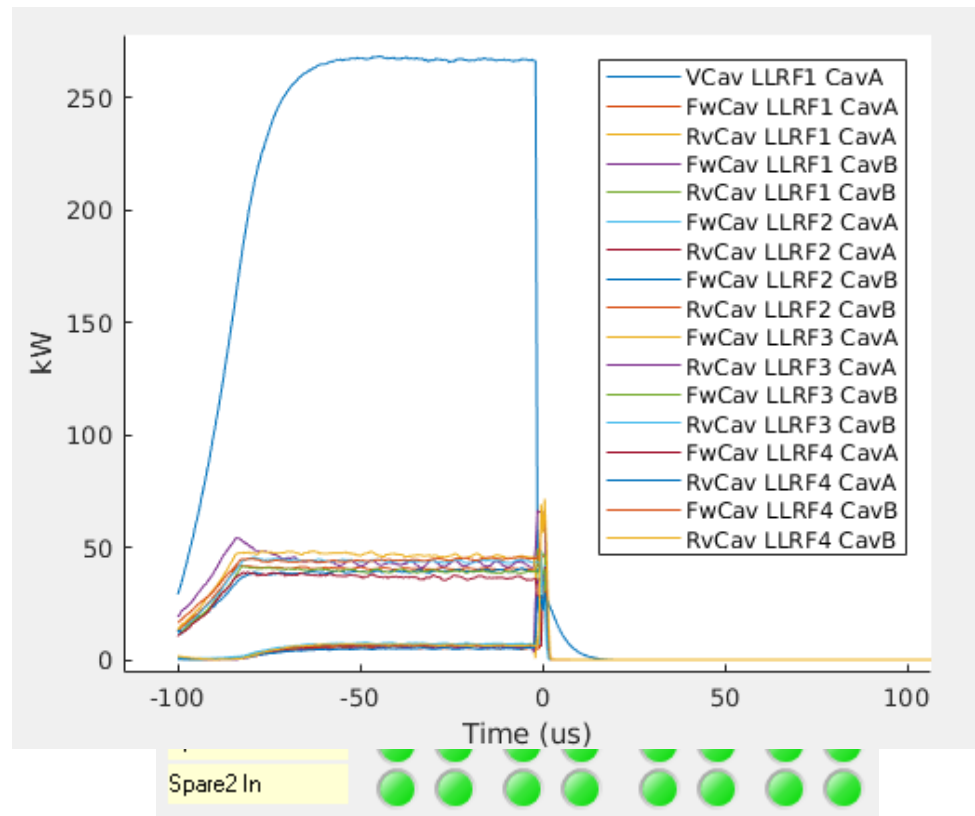

Actual interlock status

Detects the occurrence of interlocks with nanosecond precision!!!

Timestamp Activation	Timestamp Deactivation	Status	Interlock
13:20:43 (282,377,520 ns)		Red	LLRF1_CavA:TxReady
	13:21:10 (615,001,570 ns)	Green	LLRF1_CavA:TxReady
13:21:10 (615,004,110 ns)		Red	LLRF1_CavA:FwCav
13:21:10 (615,004,120 ns)		Red	LLRF1_CavA:FIM

Enables the view of the Historic of interlocks

- Easy to detect which Module/Chain has been the first one triggering an interlock
- The accuracy provided is better as the one provided in the EPICS PVs timestamp
- Data are integrated in the Post-mortem information → Correlated event occurrence

Results/Improvements in LIPAc

- Detection of recurrent problems/misconfigurations in the circulators
- Problems detected on the pre-amplifiers
- Creation of an statistics database which
- Improvement of the LLRFs increasing its robustness

1. General overview of LIPAc
2. General overview of White Rabbit
3. LIPAc and Interlocks
4. Historical Interlocks
- 5. Future Developments**

- Integration of WR time into the PV timestamp instead of using the host time (NTP)
- Machine learning for detection of critical points
- Server system status warnings using Telegram! → Easy to monitor the alarms in the system from anywhere

Thanks for your attention!!

Any questions??
